

Contents

Introduction — XI

Chapter 1

Development history and present situation of sodium-ion batteries — 1

- 1.1 The rise and development of new energy — 1
- 1.2 The development of sodium-ion batteries — 5
- 1.3 Basic principles of sodium-ion batteries — 10
- 1.4 Overview of key materials for sodium-ion batteries — 12
- 1.5 Development trend of sodium-ion batteries — 16
- References — 16

Chapter 2

Testing and research methods for sodium-ion batteries — 18

- 2.1 Test analysis of electrode materials — 18
 - 2.1.1 Structure and composition test of electrode materials — 18
 - 2.1.1.1 X-ray diffraction — 19
 - 2.1.1.2 X-ray absorption fine structure spectroscopy — 20
 - 2.1.1.3 X-ray photoelectron spectroscopy — 22
 - 2.1.1.4 Spectroscopy analysis technique — 25
 - 2.1.1.5 Scanning electron microscope technique — 30
 - 2.1.1.6 Transmission electron microscopy technique — 32
 - 2.1.1.7 Nuclear magnetic resonance technique — 33
 - 2.1.1.8 Thermogravimetric analysis technique — 34
 - 2.1.1.9 Specific surface area and pore size analysis techniques — 36
 - 2.1.1.10 Neutron diffraction analysis technique — 37
 - 2.1.2 Electrochemical performance testing of electrode materials — 37
 - 2.1.2.1 Galvanostatic charge/discharge — 38
 - 2.1.2.2 Cyclic voltammetry — 39
 - 2.1.2.3 Electrochemical impedance spectroscopy — 42
 - 2.1.2.4 Galvanostatic intermittent titration technique — 44
 - 2.1.2.5 Potentiostatic intermittent titration technique — 44
- 2.2 Test analysis of electrolytes — 45
 - 2.2.1 Liquid electrolyte analysis of sodium-ion batteries — 47
 - 2.2.2 Solid electrolyte analysis for sodium-ion batteries — 48
 - 2.2.3 Analysis of sodium-ion battery interface — 50
 - 2.2.3.1 Atomic force microscope techniques — 51
 - 2.2.3.2 Other SEI testing techniques — 52
- 2.3 In situ techniques for sodium-ion batteries — 52
 - 2.3.1 In situ structural and component evolution studies — 53
 - 2.3.1.1 In situ XRD technique — 53

2.3.1.2	In situ NMR technique —	55
2.3.1.3	In situ spectroscopy —	57
2.3.1.4	In situ synchrotron radiation technique —	57
2.3.2	In situ morphology evolution —	60
2.3.2.1	In situ TEM technique —	60
2.3.2.2	In situ atomic force microscope technique —	62
2.3.2.3	In situ neutron diffraction technique —	62
	References —	64

Chapter 3

Cathode materials for sodium-ion batteries — 67

3.1	Transition metal oxides —	68
3.1.1	O3-type transition metal oxides —	71
3.1.2	P2-type transition metal oxides —	82
3.1.3	Tunnel structure transition metal oxides —	89
3.2	Polyanionic cathode —	96
3.2.1	Phosphate-type polyanionic compounds —	97
3.2.2	Pyrophosphate-type polyanionic compound —	101
3.2.3	Sulfate-type polyanionic compounds —	102
3.2.4	Doped phosphate-type polyanionic compounds —	103
3.3	Prussian blue and Prussian blue analogues —	108
3.3.1	Prussian blue analogues based on single-point reaction —	112
3.3.2	Prussian blue based on double-points reaction —	115
3.3.3	Prussian Blue analogues based on double-point reaction —	118
3.3.4	Prussian Blue analogues compound with optimized structure —	127
3.4	Other cathode materials for sodium-ion batteries —	134
3.4.1	Transition metal fluorides —	134
3.4.2	Sodium-containing organic compound cathode materials —	135
	References —	139

Chapter 4

Anode material for sodium-ion battery — 148

4.1	Carbon-based anode materials —	150
4.1.1	Graphite —	151
4.1.2	Graphene —	153
4.1.3	Soft carbon —	155
4.1.4	Hard carbon —	157
4.1.5	Other carbon materials —	160
4.2	Titanium-based negative electrode materials —	162
4.2.1	TiO ₂ electrode material —	163
4.2.2	Li _x TiO _y -type negative electrode materials —	166
4.2.3	Na _x TiO _y -type negative electrode materials —	169

4.2.4	NaTi ₂ (PO ₄) ₃ -type negative electrode materials —	172
4.3	Transformation-responsive anode materials —	175
4.3.1	Metal oxide cathode materials —	175
4.3.2	Metal sulfide anode materials —	180
4.3.3	Metal selenide anode materials —	185
4.3.4	Metal phosphide anode materials —	189
4.3.5	Metal fluoride anode materials —	192
4.4	Intermetallic compound anode materials —	193
4.4.1	Metal anode materials (Sn, Pb, Bi) —	194
4.4.2	Metal-like anode materials (Si, Ge, As, Sb) —	197
4.4.3	Non-metallic (P) —	199
4.5	Other anode materials —	201
4.5.1	MXene —	201
4.5.2	Organic compound anode materials —	202
4.5.3	Sodium metal anode materials —	204
	References —	207

Chapter 5

Sodium-ion battery electrolyte — 218

5.1	Overview of electrolytes and their characteristics —	218
5.1.1	Chemical–electrochemical stability —	219
5.1.2	Thermal stability —	222
5.1.3	Ion transport performance —	223
5.1.4	Other performance —	227
5.2	Sodium salt —	227
5.3	Organic liquid electrolytes —	231
5.3.1	Carbonate-based electrolytes —	231
5.3.1.1	Carbonate solvent —	233
5.3.1.2	Sodium salt in ester-based electrolyte —	235
5.3.1.3	Additives in ester-based electrolytes —	236
5.3.2	Ether-based electrolyte —	238
5.4	Ionic liquid electrolyte —	245
5.4.1	Ion types of electrolytes —	246
5.4.2	Thermal stability —	247
5.4.3	Physical and chemical properties —	248
5.4.4	Electrochemical properties —	251
5.5	Solid electrolyte —	253
5.5.1	Polymer electrolyte —	253
5.5.2	Inorganic solid electrolyte —	255
5.5.2.1	Solid electrolyte of Al ₂ O ₃ and its analogues —	255
5.5.2.2	Solid electrolyte with NASICON frame structure —	255
5.5.2.3	Sulfide solid electrolyte —	258

5.5.2.4	Composite hydride solid electrolyte —	263
5.5.3	Mixed electrolyte —	265
5.6	Aqueous electrolyte —	270
5.7	Electrode–electrolyte interface —	275
5.7.1	Basic characteristics of electrode–electrolyte interface —	275
5.7.2	Electrode–electrolyte interface model —	278
5.7.2.1	SEI in hard carbon —	278
5.7.2.2	SEI in other carbon materials —	281
5.7.2.3	SEI on Ti-based anodes —	281
5.7.2.4	SEI in organic electrodes —	284
5.7.2.5	SEI in alloy anodes —	284
5.7.2.6	SEI in cathodes —	287
5.7.3	Study on the modification of electrode–electrolyte —	287
	References —	291

Chapter 6

The commercialization of sodium-ion batteries — 306

6.1	SWOT analysis of sodium-ion batteries —	307
6.1.1	Advantage —	308
6.1.1.1	Resources and costs —	308
6.1.1.2	Power characteristics —	310
6.1.1.3	Recyclability —	312
6.1.1.4	Climatic characteristics —	313
6.1.1.5	Security —	316
6.1.2	Disadvantage —	317
6.1.2.1	Energy density —	317
6.1.2.2	Electrode materials —	318
6.1.2.3	Electrolyte —	318
6.1.3	Opportunity —	319
6.1.3.1	Government policies —	319
6.1.3.2	Market demand status quo —	321
6.1.3.3	Social and technical environment —	324
6.1.4	Threat —	324
6.1.4.1	Market competition —	324
6.1.4.2	Business model —	326
6.2	Research progress of sodium-ion full battery —	327
6.2.1	Organic sodium-ion full battery —	328
6.2.1.1	Symmetric sodium-ion full cell —	330
6.2.1.2	Asymmetric sodium-ion full cell —	330
6.2.2	Aqueous sodium-ion full cell —	334
6.2.2.1	Embedded negative/embedded positive-type —	337
6.2.2.2	Capacitor negative/embedded positive-type battery system —	339

6.2.2.3	New systems —	341
6.2.3	All-solid-state sodium batteries —	343
6.2.3.1	Embedded negative-type —	345
6.2.3.2	Metal negative type —	345
6.3	Structural design of sodium-ion batteries —	348
6.3.1	Soft pack batteries —	349
6.3.2	Cylindrical/square cells —	350
6.3.3	Flexible/stretchable cells —	352
6.3.3.1	Develop porous structure deformable battery components, such as porous collectors, porous electrodes, flexible solid electrolytes, etc —	353
6.3.3.2	Ultrathin cell designs, such as single pair (or double pair) positive/diaphragm/negative structures —	354
6.3.3.3	Cell design with geometric topology, such as linear structure, Origami, Kirigami structure, etc —	354
6.3.3.4	Decoupling the flexible and energy storage parts of batteries, such as ridged batteries, zigzag batteries, etc —	356
	References —	357
