Preface — V

Anthony Bonato, Melissa A. Huggan, and Richard J. Nowakowski

The game of FLIPPING COINS — 1

Kyle Burke, Matthew Ferland, Michael Fisher, Valentin Gledel, and Craig Tennenhouse

The game of BLOCKING PEBBLES — 17

Kyle Burke, Matthew Ferland, and Shang-Hua Teng

TRANSVERSE WAVE: an impartial color-propagation game inspired by social influence and QUANTUM NIM — 39

Alda Carvalho, Melissa A. Huggan, Richard J. Nowakowski, and Carlos Pereira dos Santos

A note on numbers — 67

Alda Carvalho, Melissa A. Huggan, Richard J. Nowakowski, and Carlos Pereira dos Santos

Ordinal sums, CLOCKWISE HACKENBUSH, and DOMINO SHAVE — 77

Alexander Clow and Stephen Finbow

Advances in finding ideal play on poset games — 99

Erik D. Demaine and Yevhenii Diomidov

Strings-and-Coins and Nimstring are PSPACE-complete — 109

Eric Duchêne, Marc Heinrich, Richard Nowakowski, and Aline Parreau

Partizan subtraction games — 121

Matthieu Dufour, Silvia Heubach, and Anh Vo

Circular Nim games $CN(7, 4)$ — 139

Aaron Dwyer, Rebecca Milley, and Michael Willette

Misère domineering on $2 \times n$ boards — 157

Zachary Gates and Robert Kelvey

Relator games on groups — 171

L. R. Haff

Playing Bynum's game cautiously — 201

Melissa A. Huggan and Craig Tennenhouse

Genetically modified games — 229

Douglas E. Iannucci and Urban Larsson

Game values of arithmetic functions — 245

Yuki Irie

A base- p Sprague–Grundy-type theorem for p -calm subtraction games: Welter's game and representations of generalized symmetric groups — 281

Urban Larsson, Rebecca Milley, Richard Nowakowski, Gabriel Renault, and Carlos Santos

Recursive comparison tests for dicot and dead-ending games under misère play — 309

Urban Larsson, Richard J. Nowakowski, and Carlos P. Santos

Impartial games with entailing moves — 323

James B. Martin

Extended Sprague–Grundy theory for locally finite games, and applications to random game-trees — 343

Ryohei Miyadera and Yushi Nakaya

Grundy numbers of impartial three-dimensional chocolate-bar games — 367

Aaron N. Siegel

On the structure of misère impartial games — 389
