

List of tables

- Table 1** The highest efficiencies of the perovskite-based solar cells — **8**
- Table 2** Characteristics of the perovskite/perovskite tandem solar cells developed in monolithic and in four-terminal configuration, as well as those of the constituent sub-cells, with an active area of 0.2 cm^2 — **35**
- Table 3** Characteristics of tandem solar cells with active area of 1 cm^2 — **35**
- Table 4** Comparison between the perovskite solar cell with the gold and the transparent-contact — **39**
- Table 5** The characteristics of the stand-alone CIGS solar cell when it is used in tandem configuration — **40**
- Table 6** The performances and efficiencies of the sub-cells, as well as the efficiency of the four-terminal tandem solar cell — **42**
- Table 7** The performances of the reference cells — **51**
- Table 8** The performances of the tandem solar cell — **52**
- Table 9** Characteristics of the perovskite solar cells in both illumination directions and in both scan directions — **54**
- Table 10** Characteristics of the silicon heterojunction bottom cell — **56**
- Table 11** The characteristics of the tandem solar cell for both aperture area, without antireflection layer — **57**
- Table 12** The characteristics of the tandem solar cell for both aperture areas, with the antireflective — **58**
