

Contents

Preface — V

Chapter 1

What Is Digital Twin? Digital Twin Concept and Architecture — 1

- 1.1 Difference Between Digital Twin and Simulations — 2
- 1.2 History of Digital Twin Technology — 2
- 1.3 Various Types of Digital Twins — 3
- 1.4 Pillars of Digital Twin Technology — 4
- 1.5 Advantages of Digital Twins — 6
- 1.5.1 Digital Twin Market and Industries — 6
- 1.6 Applications — 7
- 1.7 The Future of Digital Twin — 9
- 1.7.1 Digital Twins Predict the Present and the Future — 9
- 1.8 Example of Digital Twin: An Engineer's Point of View — 10
- 1.9 Digital Twin Architecture — 11
- 1.10 Digital Thread: A Link Between the Real World and the Virtual Worlds — 13
- References — 14

Chapter 2

Benefits of Digital Twin Modelling — 17

- 2.1 Industry 4.0 — 17
- 2.2 Industry 4.0's Digital Twin — 20
- 2.3 Advantages of a Digital Twin — 20
- 2.4 Things to Think About Before Using Digital Twins — 22
- 2.5 Challenges to Implement Digital Twin — 23
- 2.5.1 Data Analytics Challenges — 23
- 2.5.2 IOT/IIOT Challenges — 24
- 2.5.3 Digital Twin Challenges — 25
- References — 26

Chapter 3

Modelling of Digital Twin — 27

- 3.1 Introduction — 27
- 3.2 Design and Implementation of Digital Twin — 28
- 3.2.1 Design of Digital Twin — 28
- 3.2.2 Data — 29
- 3.2.3 Modelling — 29
- 3.2.4 Linking — 29
- 3.2.5 Digital Twin Architecture — 30

3.2.5.1	The Physical Layer —	30
3.2.5.2	The Network Layer —	30
3.2.5.3	The Computing Layer —	31
3.3	Hardware/Software Requirement —	33
3.3.1	Hardware Components —	33
3.3.2	Data Management Middleware —	34
3.3.3	Software Components —	34
3.3.4	Digital Thread —	34
3.4	Use of Case Study —	35
	References —	37

Chapter 4

Digital Twin and IoT — 39

4.1	Contribution of IoT in Development of Digital Twin —	39
4.2	Digital Twin Use Cases by Industry —	41
4.2.1	Supply Chain —	41
4.2.1.1	Construction Companies —	43
4.2.1.2	Healthcare —	43
4.2.1.3	Use in Manufacturing Industry —	43
4.2.1.4	Aerospace —	44
4.2.1.5	Automotive —	44
4.2.1.6	Self-Driving Car Development —	44
4.3	Insight of Digital Twins in IoT —	44
4.4	Applications of Digital Twin in Healthcare: A Case Study —	45
4.4.1	Digital Twin of Hospitals —	45
4.4.2	Digital Twin of Human Body —	46
4.4.2.1	Diagnosis at Personal Level —	46
4.4.2.2	Efficient Treatment Planning —	47
4.4.3	Digital Twins for Development of Medical Instruments and Drugs —	47
4.5	Challenges of Digital Twin in Healthcare —	47
4.5.1	Less Adoption —	47
4.5.2	Quality of Data —	48
4.5.3	Privacy of Data —	48
	References —	48

Chapter 5

Machine Learning, AI, and IoT to Construct Digital Twin — 49

5.1	Introduction —	49
5.2	Big Data, Artificial Intelligence, and Machine Learning —	50
5.3	Big Data, Artificial Intelligence, Machine Learning, IoT, and Digital Twin: A Relationship —	51
5.4	Deployment of Digital Twin Using Machine Learning and Big Data —	52

- 5.4.1 Smart Manufacturing — 52
- 5.5 Use of AI — 53
- 5.5.1 Digital Twin in Aerospace — 56
- 5.5.2 Application of AI in Autonomous Driving — 56
- 5.5.3 IoT in Self-Driving Cars — 57
- 5.5.4 Big Data in Product Life Management — 57
- References — 58

Chapter 6

Intelligent and Smart Manufacturing with AI Solution — 61

- 6.1 Introduction — 61
- 6.2 Twinning of Components — 62
- 6.3 Twinning of Products or Assets — 62
- 6.4 Twinning of Process and Production — 63
- 6.5 Twinning of Systems — 63
- 6.6 Examples — 63
- 6.6.1 Aviation Industry — 63
- 6.6.2 Automobile Industry — 64
- 6.6.3 Industry of Tyre Manufacturing — 64
- 6.6.4 Power Generation — 64
- 6.6.5 Supply Chain Simulation — 65
- 6.6.6 Urban Planning — 65
- 6.6.7 Artificial Intelligence and Industry 4.0 — 65
- 6.6.8 Opportunities of Research in AI in Smart Industry — 66
- 6.6.9 AI in Electronic Industry — 67
- 6.6.10 Agriculture and Artificial Intelligence — 67
- 6.7 Conclusion — 68

Chapter 7

Information and Data Fusion for Decision-Making — 71

- 7.1 Introduction — 71
- 7.2 Data Source and Sensor Fusion — 72
- 7.3 Job Localisation and Positioning of System — 74
- 7.3.1 Magnetometer and LPF — 75
- 7.3.2 Magnetometer and Gyro — 75
- 7.4 Different Kinds of Data Fusion Techniques — 78
- 7.4.1 Durrant-Whyte Classification — 78
- 7.4.1.1 Complementary Data — 78
- 7.4.1.2 Redundant Data — 79
- 7.4.1.3 Cooperative Data — 79
- 7.4.2 Dasarathy's Taxonomy — 79
- 7.4.2.1 Data Input–Data Output (DAI–DAO) — 79

7.4.2.2	Data Input-Feature Output (DAI-FEO) —	79
7.4.2.3	Feature Input-Feature Output (FEI-FEO) —	79
7.4.2.4	Feature Input-Decision Output (FEI-DEO) —	79
7.4.2.5	Decision Input-Decision Output (DEI-DEO) —	80
7.4.3	Abstraction Level Classification —	80
7.4.3.1	Hybrid Fusion —	81
7.4.3.2	Late Fusion —	81
7.4.3.3	Hybrid Fusion —	82
7.4.4	JDL Taxonomy —	82
7.4.4.1	Source Pre-processing – Level 0 —	82
7.4.4.2	Object Refinement – Level 1 —	82
7.4.4.3	Situation Assessment – Level 2 —	83
7.4.4.4	Impact Assessment – Level 3 —	83
7.4.4.5	Process Refinement – Level 4 —	83
7.4.5	Architecture Level Classification —	84
7.4.5.1	Centralised Architecture —	84
7.4.5.2	Decentralised Architecture —	84
7.4.5.3	Distributed Architecture —	84
7.5	Conclusion —	85
	References —	85

Chapter 8

Digital Twin Use Cases and Industries — 87

8.1	Introduction —	87
8.2	Aviation and Aircraft —	89
8.3	Production —	91
8.4	Medicines and Universal Healthcare —	95
8.5	Energy and Power Generation —	97
8.6	Automotive —	98
8.7	Refineries —	99
8.8	Keen Town —	100
8.9	Mining —	102
8.10	Shipping and Maritime —	103
8.11	Academia —	105
8.12	Architecture —	105
8.13	Markets —	106
8.14	Remarks —	107
8.15	Supply Chain in Pharmaceutical Company —	108

- 8.16 Smart Transportation System — 109
- 8.17 Manufacturing System — 113
- References — 113

Chapter 9

Security in Digital Twin — 115

- 9.1 Introduction — 115
- 9.1.1 What Is a Digital Twin? — 115
- 9.1.2 Internet of Things and Information Safety — 116
- 9.1.3 The IoT Powers Digital Twin Technology — 117
- 9.1.4 Is There No Longer a Divide Between Public and Private Data? — 117
- 9.1.5 Challenges in Interoperability with Digital Twins — 118
- 9.1.6 Advanced Digital Transformation and Twins — 119
- 9.1.7 The Different Sides of Advanced Twin Security — 119
- 9.1.8 What Are the Threats? — 119
- 9.1.9 Your Activity Focuses — 121
- 9.1.10 Security by Design — 122
- 9.1.11 NIS/GDPR Compliance — 122
- 9.2 Network Safety by Solution — 122
- 9.2.1 Network Protection Computerised Twin — 122
- 9.2.2 Prescient Cyber Security — 122
- 9.2.3 Constant Assessment and Remediation — 123
- 9.2.4 Nonstop Cyber Risk Assessment — 123
- 9.2.5 Digital Protection Remediation and Countermeasures — 123
- 9.2.6 Network Safety Forensics — 123
- 9.2.7 Zero-Day Simulation and Defence — 123
- 9.2.8 IT/OT Cyber Security — 123
- 9.2.9 Network Protection Support — 123
- 9.2.10 Overview — 124
- 9.2.11 Framework Testing and Simulation — 126
- 9.2.12 Recognising Misconfigurations — 126
- 9.2.13 Entrance Testing — 126
- 9.2.14 Framework 3 — 127
- 9.3 Knowledge Input — 127
- 9.3.1 Engineer Expertise — 127
- 9.3.2 Field Information — 130
- 9.4 DAF Twinning Framework — 130
- 9.4.1 Creator — 130
- 9.4.2 Computer-Generated Environment — 131
- 9.4.3 Simulation and Replication — 131

9.4.4	Monitoring —	132
9.4.5	Device Testing —	132
9.4.6	Security and Safety Analysis —	133
9.4.7	Behaviour Learning and Analysis —	133
9.5	Management Client —	134
9.6	Proof of Concept —	134
9.6.1	Scenario Specification —	135
9.6.2	Security Rule —	138
9.6.3	Virtual Environment Generation —	138
9.6.4	Simulation and Results —	140
9.6.3.1	Comparison of the Environment —	140
9.7	Related Work —	142
9.8	Conclusions —	144
	References —	145

Chapter 10

Implementation of Digital Twin — 149

10.1	Introduction —	149
10.2	Simulation of Physics —	152
10.3	Digital Twin in Production —	155
10.4	Research Gap —	160
10.4.1	Modelling —	161
10.4.2	Conditions —	163
10.5	System Engineering —	164
10.5.1	Interactions —	167
10.6	Application —	167
10.6.1	Actual Set-Up —	167
10.6.2	Infrastructure for Communications —	170
10.7	Digital Twin —	172
10.7.1	Prognosis —	172
10.7.2	Perception —	174
10.7.3	Detection —	175
10.8	Use Cases —	175
10.8.1	Prognosis —	176
10.8.2	Observing —	177
10.8.3	Evaluates —	178
10.9	Overview and Prospects —	179
	References —	179

Chapter 11

Digital Twin Simulator — 185

- 11.1 Introduction — 185
- 11.2 An Examination of Simulation Methods and Frameworks — 186
 - 11.2.1 Simulating a Continuous System — 186
 - 11.2.2 Simulation of Discrete Events — 187
 - 11.2.3 MDC Simulation or Mixed-Resolution Simulation — 187
- 11.3 Framework — 188
- 11.4 Proposed Structure — 190
 - 11.4.1 An Improved Time Advancement Plan — 191
 - 11.4.2 A Case Study — 192
 - 11.4.2.1 Advantages of the Suggested Framework — 195
- 11.5 A Framework for the Formal Simulation Model Configuration — 196
 - 11.5.1 Model Library — 197
 - 11.5.2 Library of Scenarios — 198
 - 11.5.3 Library of Algorithms — 199
- 11.6 Operational Modelling Integration — 201
- 11.7 Example of an Educational Implementation — 203
 - 11.7.1 Structural Disintegration — 204
 - 11.7.2 Development or Selection of Product Parts — 204
 - 11.7.3 Identify Particular Information Need — 204
 - 11.7.4 Establish or Expand a Model Library — 204
 - 11.7.5 Specify the Simulation Scenario — 205
 - 11.7.6 Run the Scenario Model and Evaluate the Results of the Simulation — 207
- 11.8 Conclusion — 211
- References — 212

Chapter 12

Case Studies: Smart Cities Based on Digital Twin — 215

- 12.1 Introduction — 216
- 12.2 Digital Transformation Is an Unavoidable Trend for Smart Cities — 217
- 12.3 Cities and Their Digital Twins — 217
- 12.4 Advanced Technology Used in Digital Twin Cities — 218
- 12.5 Smart Cities and Digital Twins — 219
 - 12.5.1 Digital Twin-Based Features of Green Infrastructure — 220
 - 12.5.2 Utilisations of Digital Twins in Smart Cities — 221
 - 12.5.2.1 Smart City Management Brain — 221
- 12.6 Digital Twin Administrations for Savvy Matrix — 224
- 12.7 Public Epidemic Services in Smart Cities — 226

12.8	Services for Flood Situation Observing —	230
12.8.1	Smart Healthcare —	231
12.8.2	Intelligent Transit —	231
12.8.3	Intelligent Supply Chain —	232
12.9	Digital Twin Cities Framework —	232
12.10	Conclusion —	233
	References —	234

Index —	237
