

Contents

Preface — V

Chapter 1

Introduction — 1

- Technological progress: GDP or wellbeing? — 1
- IT gardens versus IT deserts — 4
- What is Value-Based Engineering? — 8
- What to expect from Value-Based Engineering? — 9
- Challenges of profit-driven corporate innovation culture — 11

Chapter 2

The 10 principles of Value-Based Engineering — 15

- Value-Based Engineering is not bowling alone — 17
- Principle 1: Ecosystem Responsibility — 19
- Principle 2: Willingness to Renounce Investment — 21
- Principle 3: Stakeholder Inclusiveness — 22
- Principle 4: Use Moral Philosophies for Value Elicitation — 24
- Principle 5: Context Sensitivity — 27
- Principle 6: Respect for Regional Laws and International Agreements — 29
- Principle 7: Leadership Engagement — 32
- Principle 8: Transparency of the Value Mission — 33
- Principle 9: Understanding Values in Depth — 37
- Principle 10: Using Risk-Analysis for System Requirements Elicitation — 38
- Ethically aligned design needs iterations and adjustment — 39
- Check questions — 39

Chapter 3

What values are — 40

- Towards a definition of values — 40
- Why is a rigorous value definition important? — 43
- The process of valuation — 46
- Technical valuation is not a matter of personal taste — 47
- The importance of experience in value quality judgments — 49
- Towards a three-layered value ontology — 51
- The contextual meaning of values — 54
- Conceptual value analysis — 55
- Constitution of goodness through positive & negative values — 58
- Check questions — 59

Chapter 4

Value-Based Engineering phase 1: concept and context exploration — 60

SOI context exploration — 64

System-of-System analysis — 66

Partner analysis — 71

Challenges of concept and context exploration — 73

Stakeholder identification and roles — 75

Feasibility analysis — 78

Consequences of context and concept exploration — 81

Check questions — 81

Chapter 5

Value-Based Engineering phase 2: value exploration — 82

Including stakeholder representatives — 84

Appointing Value Leads — 85

The philosophical foundations of value elicitation — 87

Practical issues in value elicitation — 97

Value clustering — 100

Prioritizing value clusters — 102

Resolving value trade-offs — 107

Conceptual analysis of core values — 109

Check Questions — 110

Chapter 6

Value-Based Engineering phase 3: ethically aligned design — 111

Ethical Value Requirements — 111

Multiple paths of ethically aligned design — 114

Standard risk-based technical design — 114

High-risk-based technical design — 122

Check questions — 132

Chapter 7

Transparency and information management — 133

Chapter 8

Epilogue: dormant values versus gadgetism — 136

Pure-will innovation — 138

Real-value innovations — 142

Schoolbook innovation management versus real-value innovation — 143

Dormant values in disruptive innovation — 146

Real values versus needs — 149

Who are lead users? — **150**
Performative acts in corporate innovation — **152**
Summing up — **153**

Appendix 1 Case study: the rate your teacher app — 155

Appendix 2 Notes on the visuals used in this book — 157

References — 163

Endnotes — 169

Abbreviations — 179

Index — 181
