

Acknowledgments

This book is based on research conducted during my Ph.D. studies at the University of Hong Kong. Section 3.6 draws on material from my paper “On The Methodological Arguments for Wave–Function Realism”, published in *International Studies in the Philosophy of Science*, 34:2, pp. 63–80.

The development of the ideas contained in this book greatly benefited from the interactions that I had in the past years with my mentors and colleagues. In particular, I am very grateful to Jo Wolff, Claus Beisbart, Dan Marshall, Davide Romano, Casey McCoy, Michael Esfeld, Eddy Keming Chen, Guido Bacciagaluppi, Jill North, Valia Allori, Jack Yip, Jamin Asay, Paolo Beltrame, Detlef Dürr, Shelly Goldstein, Nino Zanghi, Jonas Werner, Matthias Rolff, Vincent Lam, Matthias Egg, Cristian Lopez, Dustin Lazarovici, Mario Hubert, Antonio Vassallo, Matthias Lienert, Andrea Oldofredi, for helping me develop and sharp my views on Bohmian mechanics through long conversations, insightful suggestions, or challenging questions.

I thank Renato Pettoello for encouraging me to publish this work, and Michael Esfeld for his willingness and readiness to help me achieve this goal. I also thank Christoph Schirmer and Max Weber for their professional assistance during the publication process.

Finally, this book is dedicated to all my academic mentors, who have been a constant source of inspiration and support for the past ten years, and who kept me going and helped me grow intellectually.

Bern, 30 October 2022,
Vera Matarese
