

List of Tables and Figures

Tables

2.1.	The empirical assessment of a complex construct: the Type-1 analytical design	24
4.1.	The sections constituting the model of conservative ideology	134
4.2.	The structure of conservative ideology in terms of fields and values	149
5.1.	Direct operationalization of the model of conservative ideology	162
5.2.	Studies submitted to secondary analysis to select items of 'known scalability' for the construction of progressive-conservative attitude-scales	168
5.3.	Labels for attitude-scales in the progressive-conservative domain, obtained through secondary analysis	170
5.4.	Attitude-scales in the progressive-conservative domain	177
5.5.	A survey of characteristics of the progressive-conservative attitude-scales (Mokken-type)	179
5.6.	The effect of including items of 'known scalability' on the results of the scaling-procedures	179
6.1.	The dimensionality of the abstract domain in the general population; the 4-factor unrotated and rotated solutions	190
6.1a.	The dimensionality of the abstract domain in the general population; the 2-, 3-, and 5-factor rotated solutions	192
6.2.	Overall effects of educational level and political interest on the structure of ideological controversy at the abstract level	200

xvi *List of Tables and Figures*

6.3.	The dimensionality of the abstract domain in 2 semi-elites: the highly educated and the politically interested; 4-factor rotated solutions	201
6.4.	The dimensionality of the abstract domain in members of parliament; 4-factor unrotated and rotated solutions	204
6.5.	Intercorrelations of the abstract mass dimensions in (a) the general population, (b) some semi-elites and their corresponding non-elitist groups, and (c) the strategic elite of M.P.'s	206
6.6.	The validity of the 3 abstract mass dimensions and the abstract elite dimension; tests on 'known groups'	208
6.7.	The dimensionality of the attitudinal domain in the general population: the 3-factor unrotated solution and the 2- and 3-factor rotated solutions	215
6.8.	The dimensionality of the ideological domain in the general population; a first approach; 2- and 3-factor rotated solutions	224
6.9.	The dimensionality of the ideological domain in the general population: exploration and best solution; 2- and 3-factor rotated solutions	227
6.10.	The dimensionality of the ideological domain (the best solution extended with 5 religious attitude scales) in people who consider themselves to belong to a certain church; 2-factor unrotated and 2- and 3-factor rotated solutions (N=1196)	229
6.11.	Over-all effects of semi-elitism and non-elitism on the structure of ideological controversy	239
6.12.	The dimensionality of the ideological domain in the highly vs. poorly educated; 2- and 3-factor rotated solutions	240
6.13.	The dimensionality of the ideological domain in (former) members of a political party: 2- and 3-factor rotated solutions	244
6.14.	The dimensionality of the ideological domain in members of parliament: 2-factor unrotated solution and 2- and 3-factor rotated solutions	246
6.15.	Intercorrelations of the ideological mass dimensions and the abstract mass dimensions in (a) the general population, (b) some semi-elites and their corresponding non-elitist groups, and (c) the strategic elite of M.P.'s	248
6.16.	The validity of the 3 ideological mass dimensions and the ideological elite dimension; tests on 'known groups'	253

6.16a.	Intercorrelations between validating variables and ideological dimensions in the general population	254
6.17.	The relationship of the (abstract) ideological dimension to social class	258
6.18.	The relationship between social class components and the component subscales of the ideological dimensions of LITR and AUTH	261
6.19.	The results of Type -1 analysis	269
7.1.	Labels for scales to be drawn into Type-2 analysis which have been obtained through secondary analysis	278
7.2.	A survey of scales and other variables outside the progressive-conservative domain, incorporated into Type-2 analysis	280
7.3.	Social class and left-right ideology; the 4 by 4 table	286
7.4.	The relationship between social class components and the component subscales of left-right ideology	287
7.5.	The effects of status-inconsistency between education and income on left-right ideology	290
7.6.	The effects of social mobility on left-right ideology	293
7.7.	The (independent) effects of objective and subjective social class on left-right ideology	295
7.8.	The relationship between social class and left-right ideology on various levels of class consciousness	297
7.9.	A religious upbringing vs. considering oneself as belonging to a church	300
7.10.	Determinants of left-right ideology: direct relationships, partial correlations and multiple correlations	304
7.11.	The effects of the suppressor variables on the relationship between social class and left-right ideology	311
7.12.	The effects of social class and political interest on left-right ideology	312
7.13.	The relationships between the social class components and the ideological dimensions	316
7.14.	The effects of status-inconsistency between education and income on libertarianism-traditionalism	317
7.15.	The relationship between social class and voting behavior	328

Figures

7.1.	Model 1	298
7.2.	Model 2	301
7.3.	Model 3	302

xviii *List of Tables and Figures*

7.4.	Model 4	323
7.5.	The relationships between income and education (as social class components) and left-right ideology and libertarianism-traditionalism as the major ideological dimensions	335
