

Table of contents

Dmitri V. Alekseevsky and Andrea F. Spiro

Generalized reductive homogeneous spaces and quasi-graded
semisimple Lie algebras 1

Walter L. Baily, Jr.

A problem on an exceptional domain 23

V. A. Chugunov, L. D. Eskin, and S. L. Tonkonog

Methods of group analysis in dynamics of non-Newtonian fluid 31

S. Barry Cooper

Discontinuous phenomena and Turing definability 41

David A. Jordan

Iterated skew polynomial rings and simple modules 57

Helmut Koch

The completeness principle for the Golay codes and some
related codes 75

A. I. Kostrikin and M. I. Kuznetsov

Finite-dimensional Lie algebras with a nonsingular derivation 81

Vic. S. Kulikov

The irregularity of cyclic multiple plane curves 91

I. R. Shafarevich

On the arithmetic of singular $K3$ -surfaces 103

Tetsuji Shioda

The algebraic equation of Type E_6 and Chebotarev density 109

Serge Skryabin

Independent systems of derivations and Lie algebra
representations 115

V. E. Voskresenskii

Theory of invariants and Galois modules 151

List of invited speakers 159

List of contributors 161
