Preface — VII

Acknowledgments — IX

1 Preliminaries — 1

- 1.1 Topological spaces — 1
 - 1.1.1 Some notions from general topology — 1
 - 1.1.2 Simplicial complexes — 5
 - 1.1.3 Cell complexes — 9
 - 1.1.4 Manifolds — 11
 - 1.1.5 Dramatis personæ — 13
- 1.2 Continuous maps and homotopy — 19
 - 1.2.1 Homotopy of maps — 19
 - 1.2.2 Homotopy equivalence of spaces — 22
 - 1.2.3 Homotopy extension — 25
- 1.3 Lifting properties and fibrations — 30
 - 1.3.1 Liftings of continuous maps — 30
 - 1.3.2 Locally trivial fiber bundles — 32
- 1.4 Basic category theory — 36
- 1.5 The fundamental group — 39
- 1.6 The Seifert–Van Kampen Theorem — 45
 - Project: covering spaces and the fundamental group — 51
 - Project: $SL_2(\mathbb{Z})$ as an amalgamated free product — 55

2 Homology — 61

- 2.1 What is homology? — 61
 - 2.1.1 Chain complexes — 61
 - 2.1.2 Homology of chain complexes — 62
- 2.2 Simplicial homology — 65
 - 2.2.1 Simplicial chains — 66
 - 2.2.2 Calculations — 68
- 2.3 Singular homology — 73
 - 2.3.1 Singular chains — 74
 - 2.3.2 Relative homology — 78
 - 2.3.3 Excision — 82
 - 2.3.4 Homology of spheres revisited — 88
 - 2.3.5 The Mayer–Vietoris sequence — 91
 - 2.3.6 Homology with coefficients — 95
- 2.4 Cellular homology — 96
 - 2.4.1 Cellular chains — 98

2.4.2	Calculations — 101
2.5	Comparison of homology theories — 104
2.5.1	Simplicial vs. singular — 104
2.5.2	Cellular vs. singular — 105
2.5.3	Eilenberg–Steenrod axioms — 108
2.6	Homology of manifolds — 109
2.6.1	Orientability — 109
2.6.2	The top homology group and the fundamental class — 112
2.6.3	Euler characteristic — 119
2.7	Persistent homology and topological data analysis — 122
2.7.1	Filtrations, barcodes, and persistence diagrams — 123
2.7.2	Stability — 132
2.7.3	Persistence modules — 137
2.7.4	Vietoris–Rips complexes — 139
	Project: the Jordan–Brouwer Separation Theorem — 142
	Project: the Nerve Theorem — 143
	Project: example persistent homology calculations — 145
3	Cohomology and duality — 147
3.1	Cohomology of spaces — 147
3.1.1	Motivation from calculus — 147
3.1.2	Cochains — 152
3.1.3	Calculations — 159
3.2	Cup products and the cohomology ring — 165
3.2.1	Definition of the cup product — 166
3.2.2	Calculations of cohomology rings — 170
3.3	Cohomology of manifolds and Poincaré duality — 182
3.3.1	Cap products and the duality theorem — 182
3.3.2	Interaction with cup products — 192
3.3.3	Consequences of duality — 193
3.4	Universal coefficient and Künneth theorems — 196
3.4.1	Universal coefficient theorems — 196
3.4.2	The Künneth formula — 199
	Project: the geometry of Poincaré Duality — 203
4	Homotopy and spectral sequences — 205
4.1	Homotopy groups — 205
4.1.1	Definitions and basic calculations — 205
4.1.2	Whitehead’s theorem — 210
4.1.3	Hurewicz theorem — 211
4.1.4	The long exact sequence of a fibration — 214
4.2	The Leray–Serre spectral sequence — 221

4.2.1	Cohomology of fibrations —	221
4.2.2	Calculations —	227
	Project: obstruction theory and the Hopf index formula —	237
