

List of figures and tables

Figures

- Figure 1** Working mechanism used to identify 3N within 2N — 24
- Figure 2** Variants to be found and lemmatized for *credit card company* — 32
- Figure 3** Branching patterns in tripartite nominal compounds — 35
- Figure 4** Morphological structures for *children's bookstore* — 41
- Figure 5** Potential morphological structures for four-constituent compounds — 49
- Figure 6** Mapping between orthography and internal structure of 3N — 75
- Figure 7** Distribution of stress points in left- and right-branching 3N — 89
- Figure 8** Most frequent types of three-noun compounds — 99
- Figure 9** Relationship between branching patterns across frequency ranges — 101
- Figure 10** Token frequencies of most frequent left- and right-branching 3N — 103
- Figure 11** Distribution of 3N tokens among registers — 111
- Figure 12** Semantic fields established by the USAS — 115
- Figure 13** Categorization of semantic areas denoted by 3N modifiers — 116
- Figure 14** Degrees of compositionality in 2N — 120
- Figure 15** Degrees of compositionality in 3N — 122
- Figure 16** Examples of compounds with different degrees of productivity — 153
- Figure 17** Relationship between constituent family sizes — 158
- Figure 18** Distribution of compounds on functions in 3N — 159
- Figure 19** Semantic map of head nouns in the pattern '*football* + N' — 169
- Figure 20** Semantic map of head nouns in the pattern '*weekend* + N' — 171
- Figure 21** Semantic map of head nouns in the pattern '*birthday* + N' — 174
- Figure 22** Semantic map of head nouns in the pattern '*roadside* + N' — 175
- Figure 23** Relationship between productivity and formal complexity — 179
- Figure 24** Relationship between productivity and frequency — 182
- Figure 25** Relationship between productivity and association strength — 191
- Figure 26** Relationship between corpus data and entrenchment — 198
- Figure 27** The Entrenchment and Conventionalization Model — 199
- Figure 28** Different strengths of syntagmatic associations for '*health care* + N' — 220
- Figure 29** Use of exemplary patterns — 221
- Figure 30** Potential degrees of schematicity for three-noun compounds — 227
- Figure 31** Potential levels of representations in three-noun compounding — 229
- Figure 32** More and less typical instances of three-noun compounding — 240

Tables

Table 1	Compounds with identical word pair frequencies — 54
Table 2	Branching patterns assigned to 3N categorized as “unbiased” — 55
Table 3	Average number of syllables for 3N in different frequency levels — 61
Table 4	Average number of syllables distributed among constituents — 63
Table 5	Average number of morphemes for 3N in different frequency levels — 64
Table 6	Average number of morphemes distributed among constituents — 65
Table 7	Syllable counts distinguished for frequency levels and BPs — 69
Table 8	Morpheme counts distinguished for frequency levels and BPs — 71
Table 9	Use of available spelling formats — 77
Table 10	Distribution of 3N tokens on spelling formats — 80
Table 11	Stress assigned to left- and right-branching 3N — 87
Table 12	Count of 3N types in different token frequency ranges — 96
Table 13	Distribution of types and tokens among frequency ranges — 98
Table 14	Type-token relationship distinguished for branching patterns — 103
Table 15	Most frequent left-branching and right-branching compounds — 107
Table 16	Distribution of 3N tokens among registers — 112
Table 17	3N and corresponding syntactic phrases — 128
Table 18	3N and corresponding syntactic phrases with token frequencies — 131
Table 19	Most productive compounds based on types of 3N — 149
Table 20	Compounds with lower degrees of productivity — 150
Table 21	Categorization of 2N based on number of 3N formed — 152
Table 22	Number of 3N formed by 2N of different productivity categories — 155
Table 23	Correlation coefficients for different productivity subsets — 160
Table 24	Head and modifier family sizes for most productive compounds — 161
Table 25	Head and modifier family sizes for less productive compounds — 162
Table 26	Most productive modifiers (left) and heads (right) — 164
Table 27	Comparison of constituent family sizes for embedded compounds — 165
Table 28	Average number of 3N formed per 2N — 166
Table 29	Contingency table for <i>health care</i> — 186
Table 30	Association scores for exemplary compounds — 189
