

Contents

1	Principles of thermal energy storage (TES) — 1
1.1	Importance of energy conservation and management — 1
1.2	Energy storage technologies — 1
1.3	Concept of thermal energy storage — 2
1.4	Classification of TES technologies — 4
1.4.1	Sensible heat storage (SH-TES) — 4
1.4.2	Latent heat storage (LH-TES) — 6
1.4.3	Thermochemical energy storage (TH-TES) — 7
2	Latent heat TES and phase change materials (PCMs) — 9
2.1	Principle and advantages of latent heat TES — 9
2.2	Selection and properties of a phase change material — 10
2.3	Classification of PCMs — 11
2.3.1	Organic PCMs — 12
2.3.2	Inorganic PCMs — 14
2.3.3	Eutectic PCMs — 15
2.4	Confinement techniques for organic PCMs — 17
2.4.1	Encapsulation — 17
2.4.2	Shape-stabilization — 20
2.5	Cost and sustainability of PCMs — 24
2.6	Thermal conductivity enhancement of organic PCMs — 26
2.7	Applications of PCMs for heat management — 27
2.7.1	Thermal management in buildings — 27
2.7.2	Smart textiles — 29
2.7.3	Thermal management of electronics — 30
2.7.4	Biomedical applications — 33
2.7.5	Thermoregulating packaging — 33
2.8	Flame resistance of organic PCMs — 34
3	Polymer-matrix composites — 35
3.1	Introduction to polymer composites — 35
3.1.1	Definition and classification — 35
3.1.2	Significance and applications — 36
3.2	Reinforcements — 37
3.2.1	Continuous and discontinuous fibers — 37
3.2.2	Particles and other reinforcements — 39
3.3	Matrices — 41
3.3.1	Thermosetting matrices — 42
3.3.2	Thermoplastic matrices — 43
3.4	Fabrication of fiber-reinforced composites — 44

3.4.1	Continuous fibers and thermosetting matrices —	44
3.4.2	Continuous fibers and thermoplastic matrices —	45
3.4.3	Discontinuous-fiber composites —	47
3.5	Characterization of fiber-reinforced polymer composites —	47
3.5.1	Microstructural analysis —	48
3.5.2	Mechanical characterization —	49
3.5.3	Thermal and thermomechanical characterization —	50
3.5.4	Chemical and environmental characterization —	51
4	Multifunctional composites and structural TES materials —	53
4.1	Multifunctional materials —	53
4.1.1	Multifunctionality of polymer composites —	54
4.1.2	Applications and examples —	54
4.2	Structural TES polymer composites —	58
4.3	PCMs in polymers and polymer composites —	61
4.3.1	PCMs in polymer matrices —	62
4.3.2	PCMs in structural polymer composites —	68
5	Evaluating the multifunctional performance of structural TES composites —	82
5.1	Relationship between the structural and TES performance: synergistic or parasitic? —	83
5.2	Determination of the multifunctional efficiency —	86
6	Conclusions and future perspectives —	91
6.1	Comprehensive overview of the research trajectory —	91
6.2	Future research directions —	93
