

Contents

Preface — VII

1 Food, nutrition, and diet — 1

- 1.1 Basic concepts — 1
- 1.1.1 Feeding, nutrition, food, and nutrients — 1
- 1.1.2 Diet and dietetics — 1
- 1.1.3 Biological roles of nutrients — 2
- 1.2 Factors that influence diet — 3
- 1.3 Nutritional requirements and basic recommendations — 5
- 1.4 Sustainability — 9
- 1.5 Personalized dietary patterns — 9
- References — 11

2 Water — 13

- 2.1 Introduction — 13
- 2.2 Water as a nutrient — 14
- 2.3 Water balance in the body: inputs, outputs, and regulation — 14
- 2.4 Water requirements — 16
- 2.5 Water resources and supply — 17
- 2.6 The importance of water in food production — 19
- 2.7 The importance of water in the properties of foods — 21
- References — 22

3 Carbohydrates — 25

- 3.1 Definition, terminology, and classification — 25
- 3.2 Monosaccharides and oligosaccharides — 27
- 3.2.1 Monosaccharides — 27
- 3.2.2 Cyclic forms of monosaccharides — 30
- 3.2.3 Disaccharides and oligosaccharides — 33
- 3.2.4 Derivatives of monosaccharides — 35
- 3.3 Vitamin C — 36
- 3.3.1 Properties and biosynthesis — 36
- 3.3.2 Biological roles — 38
- 3.3.3 Role of L-ascorbate in cancer prevention and treatment — 39
- 3.3.4 Occurrence, stability, and dietary reference values for vitamin C — 40
- 3.4 Polysaccharides: fiber — 42
- 3.4.1 Starch — 42
- 3.4.2 Glycogen — 44
- 3.4.3 Cellulose — 45

3.4.4	Other important polysaccharides in human nutrition: dietary fiber — 47
3.5	Properties and importance of carbohydrates in the food industry — 51
3.6	Browning reactions of sugars — 54
3.7	Importance of carbohydrates in the diet — 56
3.8	Metabolism of carbohydrates: glycolysis and gluconeogenesis — 58
3.8.1	Glycolysis — 59
3.8.2	Gluconeogenesis — 60
3.8.3	Regulation of glycolysis and gluconeogenesis — 62
3.8.4	Glycogen synthesis and degradation — 64
3.8.5	Pentose phosphate pathway of glucose oxidation — 66
3.9	Regulation of blood glucose — 67
3.10	Diabetes: types, metabolic changes, and dietary recommendations — 69
3.10.1	Type I diabetes mellitus (T1DM) — 70
3.10.2	Type II diabetes mellitus (T2DM) — 71
3.11	Other problems related to the metabolism of carbohydrates — 73
	References — 74

4 Lipids — 81

4.1	Definition and classification — 81
4.2	Fatty acids — 84
4.2.1	Nomenclature of fatty acids — 84
4.3	Triacylglycerides: edible fats and oils — 89
4.4	Production of oils and fats for human consumption — 92
4.4.1	Animal sources — 92
4.4.2	Vegetable sources — 92
4.5	Oil refining — 94
4.6	Deterioration of oils and fats — 95
4.6.1	Lipolysis — 96
4.6.2	Lipid oxidation — 96
4.7	Importance in the diet: fat as energy source — 98
4.8	Olive oil: the healthy oil — 103
4.8.1	Types of olive oil — 103
4.8.2	The unsaponifiable fraction of olive oil — 103
4.9	Fat and adipose tissue — 104
4.9.1	Lipids from the diet: digestion and absorption — 104
4.9.2	Lipids from the adipose tissue: mobilization of TAGs — 105
4.10	Degradation and biosynthesis of fatty acids in animals — 106
4.10.1	Fatty acid degradation — 106
4.10.2	Biosynthesis of fatty acids — 109
4.10.3	Regulation of the metabolism of fatty acids — 112

4.10.4	Metabolism of the ketone bodies —	112
4.11	Essential fatty acids: metabolism of arachidonate —	114
4.12	Nonhydrolyzable lipids: importance in the diet —	116
4.12.1	Carotenoids —	117
4.12.2	Steroids —	119
4.13	Metabolism of cholesterol —	121
4.14	Cholesterol and lipid transport in the bloodstream: apolipoproteins —	122
4.15	Lipids and the mechanism of atherogenesis —	123
	References —	126
5	Proteins —	131
5.1	Introduction —	131
5.2	Functions of proteins —	134
5.3	Requirements of proteins in human nutrition —	137
5.3.1	Importance of protein in the diet: essential amino acids and evaluation of protein quality —	140
5.4	Protein sources and composition —	145
5.4.1	Plant-based protein —	146
5.4.1.1	Cereal proteins —	146
5.4.1.2	Pulses —	149
5.4.1.3	Sustainable production of plant-based protein —	149
5.4.2	Animal-based protein —	150
5.4.2.1	Meat —	151
5.4.2.2	Milk and dairy products —	152
5.4.2.3	Eggs —	154
5.4.2.4	Fish —	156
5.4.3	New and emerging sources of protein (see Chapter 16) —	157
5.4.4	Protein energy malnutrition —	157
5.5	Hydrolysis and denaturing of proteins —	158
5.6	Functional properties of proteins —	159
5.7	Protein deterioration by microorganisms —	161
5.7.1	The Ehrlich pathway —	162
5.7.2	Production of biogenic amines —	162
5.7.3	Stickland reaction —	162
5.8	Amino acid metabolism: interconversion and degradation —	163
5.8.1	Transamination —	165
5.8.2	Deamination —	165
5.9	Metabolic fate of ammonium: the urea cycle —	166
5.10	Proteins and adverse reactions to foods —	167
5.10.1	Food adverse reactions with an immune basis —	168
5.10.2	Amino acid disorders —	169

5.11	Other nitrogen-containing nutrients: nucleotides —	172
5.11.1	Definition and general concepts —	172
5.11.2	The role of nucleotides in nutrition —	175
5.11.3	Nucleotide disorders —	177
5.11.4	Hyperuricidemia: gout —	178
	References —	180
6	Vitamins —	187
6.1	Concept and classification —	187
6.2	History —	187
6.3	Structure and <i>in vivo</i> function of water-soluble vitamins —	189
6.3.1	Vitamin B ₁ (thiamin or thiamine) —	189
6.3.1.1	Structure —	189
6.3.1.2	<i>In vivo</i> function —	191
6.3.1.3	Sources and bioavailability —	192
6.3.1.4	Stability —	193
6.3.1.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis —	199
6.3.2	Vitamin B ₂ (riboflavin) —	200
6.3.2.1	Structure —	200
6.3.2.2	<i>In vivo</i> function —	200
6.3.2.3	Sources and bioavailability —	201
6.3.2.4	Stability —	202
6.3.2.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis —	202
6.3.3	Vitamin B ₃ (niacin) —	207
6.3.3.1	Structure —	207
6.3.3.2	<i>In vivo</i> function —	207
6.3.3.3	Sources and bioavailability —	208
6.3.3.4	Stability —	209
6.3.3.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis —	209
6.3.4	Vitamin B ₅ (pantothenic acid) —	210
6.3.4.1	Structure —	210
6.3.4.2	<i>In vivo</i> function —	210
6.3.4.3	Sources and bioavailability —	211
6.3.4.4	Stability —	211
6.3.4.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis —	211
6.3.5	Vitamin B ₆ —	212
6.3.5.1	Structure —	212
6.3.5.2	<i>In vivo</i> function —	212
6.3.5.3	Sources and bioavailability —	213
6.3.5.4	Stability —	214
6.3.5.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis —	214
6.3.6	Biotin (vitamin B ₇ /H) —	215

6.3.6.1	Structure — 215
6.3.6.2	<i>In vivo</i> function — 215
6.3.6.3	Sources and bioavailability — 216
6.3.6.4	Stability — 217
6.3.6.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 217
6.3.7	Vitamin B ₉ (folic acid) — 219
6.3.7.1	Structure — 219
6.3.7.2	<i>In vivo</i> function — 219
6.3.7.3	Sources and bioavailability — 220
6.3.7.4	Stability — 221
6.3.7.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 221
6.3.8	Vitamin B ₁₂ — 222
6.3.8.1	Structure — 222
6.3.8.2	<i>In vivo</i> function — 223
6.3.8.3	Sources and bioavailability — 224
6.3.8.4	Stability — 225
6.3.8.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 226
6.3.9	Vitamins of complex B and gut microbiota — 227
6.3.10	B vitamins and mitochondrial function — 227
6.4	Structure and <i>in vivo</i> function of lipid-soluble vitamins — 229
6.4.1	Vitamin A — 229
6.4.1.1	Structure — 229
6.4.1.2	<i>In vivo</i> function — 229
6.4.1.3	Sources and bioavailability — 232
6.4.1.4	Stability — 235
6.4.1.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 235
6.4.2	Vitamin D — 237
6.4.2.1	Structure — 237
6.4.2.2	<i>In vivo</i> function — 237
6.4.2.3	Sources and bioavailability — 238
6.4.2.4	Stability — 240
6.4.2.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 240
6.4.3	Vitamin E — 242
6.4.3.1	Structure — 242
6.4.3.2	<i>In vivo</i> function — 242
6.4.3.3	Sources and bioavailability — 243
6.4.3.4	Stability — 244
6.4.3.5	Dietary Reference Values (DRVs): hypo- and hypervitaminosis — 245
6.4.4	Vitamin K — 246
6.4.4.1	Structure — 246
6.4.4.2	<i>In vivo</i> function — 246

- 6.4.4.3 Sources and bioavailability — **247**
- 6.4.4.4 Stability — **249**
- 6.4.4.5 Dietary Reference Values (DRVs): hypo- and hypervitaminosis — **249**
- 6.5 Vitamin-like or conditionally essential nutrients (CENs) — **250**
 - References — **252**

7 Minerals — 258

- 7.1 Definition and classification — **258**
- 7.2 Macroelements — **259**
 - 7.2.1 Electrolytes: Na^+ , K^+ , and Cl^- — **259**
 - 7.2.1.1 Biological roles — **260**
 - 7.2.1.2 Sources, bioavailability, and homeostasis — **262**
 - 7.2.1.3 Electrolytes status, Dietary Reference Values (DRVs) — **267**
 - 7.2.1.4 Sodium, potassium, and chloride deficiency — **268**
 - 7.2.1.5 Electrolytes excess — **269**
 - 7.2.1.6 Acid-base metabolism and electrolytes — **271**
 - 7.2.2 Calcium — **273**
 - 7.2.2.1 Biological roles — **273**
 - 7.2.2.2 Sources, bioavailability, and homeostasis — **274**
 - 7.2.2.3 Calcium status, Dietary Reference Values (DRVs) — **278**
 - 7.2.2.4 Calcium deficiency — **279**
 - 7.2.2.5 Calcium excess — **279**
 - 7.2.3 Phosphorus — **280**
 - 7.2.3.1 Biological roles — **280**
 - 7.2.3.2 Sources, bioavailability, and homeostasis — **281**
 - 7.2.3.3 Phosphorus status, Dietary Reference Values (DRVs) — **283**
 - 7.2.3.4 Phosphorus deficiency — **284**
 - 7.2.3.5 Phosphorus excess — **285**
 - 7.2.4 Magnesium — **285**
 - 7.2.4.1 Biological roles — **285**
 - 7.2.4.2 Sources, bioavailability, and homeostasis — **287**
 - 7.2.4.3 Magnesium status, Dietary Reference Values (DRVs) — **289**
 - 7.2.4.4 Magnesium deficiency — **289**
 - 7.2.4.5 Magnesium excess — **290**
- 7.3 Microelements — **291**
 - 7.3.1 Iron — **291**
 - 7.3.1.1 Biological roles — **291**
 - 7.3.1.2 Sources, bioavailability, and homeostasis — **292**
 - 7.3.1.3 Iron status, Dietary Reference Values (DRVs) — **294**
 - 7.3.1.4 Iron deficiency — **295**
 - 7.3.1.5 Iron excess — **297**
 - 7.3.2 Zinc — **297**

7.3.2.1	Biological roles —	298
7.3.2.2	Sources, bioavailability, and homeostasis —	299
7.3.2.3	Zinc status, Dietary Reference Values (DRVs) —	300
7.3.2.4	Zinc deficiency —	301
7.3.2.5	Zinc excess —	306
7.3.3	Copper —	306
7.3.3.1	Biological roles —	307
7.3.3.2	Sources, bioavailability, and homeostasis —	307
7.3.3.3	Copper status, Dietary Reference Values (DRVs) —	310
7.3.3.4	Copper deficiency —	310
7.3.3.5	Copper excess —	311
7.3.4	Iodine —	311
7.3.4.1	Biological roles —	312
7.3.4.2	Sources, bioavailability, and homeostasis —	312
7.3.4.3	Iodine status, Dietary Reference Values (DRVs) —	313
7.3.4.4	Iodine deficiency —	314
7.3.4.5	Iodine excess —	315
7.3.5	Selenium —	316
7.3.5.1	Biological roles —	316
7.3.5.2	Sources, bioavailability, and homeostasis —	317
7.3.5.3	Selenium status, Dietary Reference Values (DRVs) —	319
7.3.5.4	Selenium deficiency —	319
7.3.5.5	Selenium excess —	320
7.3.6	Manganese —	320
7.3.6.1	Biological roles —	320
7.3.6.2	Sources, bioavailability, and homeostasis —	321
7.3.6.3	Manganese status, Dietary Reference Values (DRVs) —	322
7.3.6.4	Manganese deficiency —	322
7.3.6.5	Manganese excess —	322
7.3.7	Molybdenum —	323
7.3.7.1	Biological roles —	323
7.3.7.2	Sources, bioavailability, and homeostasis —	324
7.3.7.3	Molybdenum status, Dietary Reference Values (DRVs) —	325
7.3.7.4	Molybdenum deficiency —	325
7.3.7.5	Molybdenum excess —	325
7.4	Elements whose essentiality has not been established in humans —	326
7.4.1	Chromium —	326
7.4.1.1	Biological roles —	326
7.4.1.2	Sources, bioavailability, and homeostasis —	327
7.4.1.3	Chromium status, Dietary Reference Values (DRVs) —	327
7.4.1.4	Chromium deficiency —	328
7.4.1.5	Chromium excess —	328

7.4.2	Fluorine — 328
7.4.2.1	Biological roles — 328
7.4.2.2	Sources, bioavailability, and homeostasis — 329
7.4.2.3	Fluoride status, Dietary Reference Values (DRVs) — 329
7.4.2.4	Fluoride deficiency — 330
7.4.2.5	Fluoride excess — 330
7.4.3	Boron — 331
7.4.4	Silicon — 331
	References — 332

8 Oxidative stress and antioxidants in nutrition — 341

Victoria Valls-Bellés

8.1	Oxygen and its toxicity — 341
8.2	Formation of reactive oxygen species (ROS) and other free radicals in vivo — 342
8.2.1	The concept of free radical — 342
8.2.2	Sources of free radicals — 344
8.2.2.1	Endogenous sources — 344
8.2.2.2	Exogenous sources — 346
8.3	Biological damage by ROS — 347
8.3.1	Damage to lipids — 348
8.3.2	Damage to proteins — 351
8.3.3	DNA damage — 351
8.3.4	Cholesterol damage — 352
8.4	Natural defenses — 353
8.4.1	Antioxidant enzyme system — 353
8.4.2	Nonenzymatic antioxidant systems — 355
8.5	Antioxidant nutrients — 357
8.5.1	Vitamin E — 357
8.5.2	Vitamin C — 357
8.5.3	Carotenoids — 358
8.5.4	Phenolic compounds — 359
8.6	Repair systems — 361
8.6.1	Direct — 361
8.6.2	Indirect — 361
8.7	Oxidative stress and health — 361
8.7.1	Oxidative stress and cardiovascular pathology — 362
8.7.1.1	Oxidation of LDL — 362
8.7.2	Oxidative stress and inflammation processes — 363
8.8	Mechanisms of ROS elimination — 364
	References — 365

9 The biochemistry of flavor perception — 373

- 9.1 Definition of flavor — **373**
- 9.2 Taste — **373**
 - 9.2.1 Sweet taste — **376**
 - 9.2.2 Umami taste — **378**
 - 9.2.3 Bitter taste — **378**
 - 9.2.4 Sour taste — **380**
 - 9.2.5 Salty taste — **380**
 - 9.2.6 Fat taste — **382**
 - 9.2.7 Other tastes — **382**
- 9.2.8 The neuroendocrinology of taste — **383**
- 9.3 Olfaction — **387**
- 9.4 Flavor formation in foods — **388**
 - 9.4.1 The role of saliva in flavor formation and perception — **389**
- References — **390**

10 Food additives — 394

María Montaña Durán Barrantes

- 10.1 Introduction — **394**
- 10.2 Definition of food additive — **395**
- 10.2.1 Acceptable Daily Intake (ADI) — **397**
- 10.3 Classification of food additives — **399**
- 10.3.1 International numbering system of food additives: E number — **402**
- 10.4 Food colorings — **402**
- 10.5 Food stabilizers for chemical and biological alterations — **403**
- 10.6 Structural food stabilizers — **405**
- 10.7 Sweeteners — **407**
- 10.8 Flavorings and flavor enhancers — **408**
- 10.9 Others — **410**
 - 10.9.1 Food enzymes — **412**
- References — **412**

11 Food safety — 414

María Montaña Durán Barrantes

- 11.1 Introduction — **414**
- 11.2 Biological foodborne diseases of microbial origin — **415**
- 11.3 Biological foodborne diseases of nonmicrobial origin — **418**
- 11.4 Abiotic foodborne diseases — **419**
- 11.5 Food hygiene: food safety from production to consumption — **420**
 - 11.5.1 Legislation and reference bodies — **420**
 - 11.5.2 Hygienic design for food industry — **422**
 - 11.5.3 Food alert network — **423**

- 11.5.4 Emerging risks — **424**
- References — **427**

12 The biochemistry of digestion — 430

Victoria Valls-Bellés

- 12.1 Introduction: functional organization of the digestive system and associated organs — **430**
- 12.1.1 Gastrointestinal wall — **432**
- 12.1.2 Gastrointestinal blood flow: splanchnic circulation — **433**
- 12.1.3 Neural regulation of gastrointestinal function — **434**
- 12.1.4 Chemical regulation of gastrointestinal function — **435**
- 12.1.5 Membrane potential in the GIT — **436**
- 12.2 The mouth: phases of swallowing — **437**
- 12.2.1 Cephalic phase — **437**
- 12.2.2 Oral phase — **438**
- 12.2.3 Pharyngeal phase — **439**
- 12.2.4 Esophageal phase — **439**
- 12.3 Stomach. Functional structure. Secretion. Postprandial activity and gastric motility — **441**
- 12.3.1 Gastric secretion — **442**
- 12.3.2 Gastric function: objectives — **443**
- 12.3.3 Regulation of gastric secretion — **444**
- 12.3.4 Gastric motility — **445**
- 12.3.5 Regulation of gastric emptying — **446**
- 12.4 Pancreas — **446**
- 12.4.1 Physiology of exocrine pancreas — **446**
- 12.4.2 Physiology of endocrine pancreas — **448**
- 12.4.3 Regulation of exocrine secretion — **448**
- 12.4.4 Summary of pancreas functions — **449**
- 12.5 The liver: structure. Hepatic secretion: storage and regulation — **449**
- 12.5.1 Bile production by the hepatocytes — **451**
- 12.5.2 Synthesis of bile acids — **451**
- 12.5.3 Regulation of liver secretion and vesicular emptying — **452**
- 12.5.4 Functions of bile salts — **453**
- 12.5.5 Liver functions (discussed in Chapter 14, Section 14.6) — **453**
- 12.6 Small intestine — **453**
- 12.6.1 Digestion in the small intestine — **453**
- 12.6.1.1 Chemical digestion — **453**
- 12.6.1.2 Mechanical digestion: motility — **453**
- 12.6.1.3 Regulation of small intestine motility — **455**
- 12.6.2 Composition of intestinal secretions — **455**
- 12.6.3 Small bowel emptying — **456**

12.6.4	Functions of the small intestine —	456
12.7	Large intestine. Functional structure. Absorption and secretion. Motility of the colon: peristalsis and mass movements. Defecation —	457
12.7.1	Motility of the colon —	457
12.7.2	Chemical digestion in the large intestine —	458
12.7.3	The rectum —	458
12.7.4	Defecation reflex —	459
12.7.5	Feces composition —	459
12.7.6	Functions of the large intestine —	460
12.8	The microbiota of the gastrointestinal tract and its functions —	460
	Articles and textbooks used for the elaboration of Chapter 12 —	460
13	Absorption of nutrients —	462
13.1	Introduction —	462
13.2	Transport pathways across the small intestine epithelium —	464
13.3	Absorption of carbohydrates —	466
13.4	Absorption of amino acids and oligopeptides —	467
13.5	Absorption of lipids —	468
13.5.1	Uptake of free long chain fatty acids, monoacylglycerols, and lysophospholipids by enterocytes —	473
13.5.2	Uptake of sterols and fat-soluble vitamins D, E, and K —	474
13.5.3	Uptake of vitamin A and carotenoids —	474
13.5.4	Intracellular processing of dietary lipids within the enterocyte —	475
13.6	Absorption of water soluble vitamins —	476
13.7	Absorption of minerals —	476
13.7.1	Water and electrolytes (Figure 13.6) —	476
13.7.2	Calcium (Figure 13.7) —	483
13.7.3	Phosphorus (Figure 13.8) —	485
13.7.4	Magnesium (Figure 13.9) —	486
13.7.5	Iron (Figure 13.10) —	488
13.7.6	Zinc (Figure 13.11) —	490
13.7.7	Copper (Figure 13.11) —	490
13.7.8	Iodide —	492
13.7.9	Selenium —	492
13.7.10	Manganese absorption —	493
13.7.11	Other microelements —	493
13.8	Absorption in the large intestine —	493
	References —	495
