

Contents

List of Contributing Authors — V

Foreword by Professor Andris Piebalgs, Former EU Commissioner for Energy — XI

Foreword by Dr. Peter Körte, Chief Technology Officer & Chief Strategy Officer at Siemens AG — XV

Preface of the Editors — XIX

Abbreviations — XXXI

Frequently Used Metric Prefixes and Physical Quantities — XLV

Oliver D. Doleski and Monika Freunek

1 History and Current Challenges of Electrical Power Supply Systems — 1

Anna Pfendler, Berit Erlach, and Jutta Hanson

2 General Technical Aspects of the Electrical Power System: A Case Study of the German Power System in Transition — 37

Prabhajit Kumar Sarkar

3 Power Sector Transformation: An Indian Perspective — 53

Sascha Schröder

4 Major Non-technical Questions of Today's Energy Supply: Between Energy Policy and Regulation — 95

Almut Kirchner

5 Scenarios for the Energy System — 111

Walter Boltz

6 How Europe Regulates the Internal Energy Market — 127

Andreas Benz

7 Requirements for the Reliability of Energy System Planning — 137

Ella Zhou and Lizhi Wang

8 Currents of Change: Electrification for a Greener Future — 151

Jan Emblemsvåg

9 Understanding the Levelized Cost of Energy — 167

Sebastian Thiem, Oliver D. Doleski, Martin Kautz, and Lukas Höttecke

10 Influence of CO₂ Targets on Energy Planning: Optimal Energy Supply from a Climate Perspective — 185

Katarina Van Der Haar

11 Energy Planning With a Special Focus on Hard-To-Abate Sectors and Decarbonization — 203

Rainer M. Bachmann, Oliver D. Doleski, and Monika Freunek

12 Energy Storage Technologies in Support of the Energy Transition and Climate Neutrality — 235

Michael Schwan and Ben Gernsberger

13 Electrical Supply Infrastructure Under Transformation — 249

Rainer Pflaum and Tobias Egeler

14 Innovation (Not Only) in the Grid Sector: Market and Regulation Also Require Reinvention — 275

Thomas Dürr and Alexander Dürr

15 Challenges of Today's Energy Distribution — 303

Anna Fulterer and Ingo Leusbrock

16 Resilience: Considering Disruptive Events in the Energy Planning of Buildings and Neighborhoods — 335

Xiaofan Wu and Chris Davidson

17 Siemens Princeton Resilient Campus: Defining the Future of Energy with a Sustainable and Reliable Microgrid — 351

Robert Gersdorf, Stefan Niessen, and Daniel Wragge

18 Introduction to Energy Trading and the Role of Energy Exchanges — 361

Philippe Vassilopoulos, Zohra Boumedhel, and Antoine Donne

19 The Role of Power Exchanges (PX) in the Energy Transition: Between Cross-Border and Local Trading — 375

Louisa Wasmeier, Michael Hinterstocker, and Simon Köppl

- 20 Energy Markets, Grids and Flexibility: A Future Market Design for a Decarbonized Energy System — 395**

Michael Merz

- 21 Local Trading Within Energy Communities — 419**

Stephan Bowe and Tatiana Demeusy

- 22 Verification Methods for Renewable Electricity: Guarantees of Origin, PPAs, and Renewable Fuels of Non-biological Origin — 435**

Marcus Hörhammer, Stephan Röhrenbeck, and Frank Hirschi

- 23 The Unique German Smart Metering Approach in Contrast to International Strategies — 453**

Hubert Kirrmann[†], Max Felser, and Monika Freunek

- 24 Real-Time as a Natural System Boundary — 473**

Monika Freunek

- 25 Internet of Things (IoT) and Sensor Technology in Electrical Energy Supply Systems — 495**

Peter A. M. Hermans

- 26 The Perfect Storm: Where the Energy Transition Meets the Digital Transformation — 509**

Herbert Saurugg

- 27 The Dark Side of Digitalization — 529**

Monika Freunek

- 28 Artificial Intelligence and Data Efficiency — 543**

Karsten Kinast

- 29 Aspects of Data Protection and Security in Smart Electronical Systems out of “European Perspective” — 565**

Benjamin Deppe

- 30 Actively Shaping the Digital Transformation Process with Systemic Organizational Development — 581**

Khaled Popal

- 31 New IT for the Digital Energy of the Future — 609**

Dogan Günes

- 32 Connecting and Digitalizing the Energy Sector with a Dynamic IT Strategy — 629**

José González

- 33 Information Security and Digitalization at Distribution System Operators — 649**

Torben Keck, Matthias Mett, Toto Maas, and Eike Dehning

- 34 Digital Efficiency – a Powerful Tool! — 671**

Gero Bieser

- 35 Asset Management in the Energy Transition: Requirements and Technologies — 695**

Simon Erb

- 36 Power Shortage Situation — 715**

Herbert Saurugg

- 37 Blackout: The European Electricity Supply System in Transition — 733**

Ramona Zimmermann

- 38 Everyday Life Without Electricity in the Household Customer Sector — 781**

Raphael Lechner, Thomas Gollwitzer, and Patrick Dirr

- 39 Technical Requirements and Implications of Functioning Sector Coupling — 791**

Till Kemper

- 40 Transition from Planning to Implementation of District Projects with Sector Coupling — 819**

Claudia Weißmann, Dieter Kunstmann, and Maria Reichel

- 41 Green Hydrogen Potentials for the Power Sector in Germany — 831**

Jan Emblemståg

- 42 Electricity is Easy, Fuels are Hard: Lessons from the Maritime Industry — 843**

Arvid Amthor, Sebastian Schreck, and Sebastian Thiem

- 43 Project example “pebbles” — 867**

Rainer Pflaum and Tobias Egeler

44 New Digital Technologies Find Their Way into the Grid Sector — 889

Julian Hagenschulte and Jeff Kartanegara

**45 Environmental, Social, Governance (ESG), and Digitalization in the
Commercial Real Estate Industry — 909**

Volker Aumann and Markus Kamann

46 Scenarios for Training and Continuing Education — 923

Michael Bourque

**47 Electricity Market and Electricity System Transformation: North American
Perspective — 943**

Index — 953
