

Acknowledgements

The foundations and framework for this book were laid out in the programme of research by What Works Scotland (WWS), and in particular the workstream directed by Oliver Escobar at the University of Edinburgh on democratic innovations, community empowerment, citizen participation and deliberative processes. This work would not be possible without joint funding from the UK Economic and Social Research Council and the Scottish Government (Grant number ES/M003922/1). We thank UK Research and Innovation for their support in making this book open access, so that it can reach the widest possible public and become an accessible resource for citizens, practitioners, activists, officials and researchers. We also thank WWS colleagues for the enduring legacy of the programme and ongoing collaborations.

We are particularly indebted to the participants in our panels on Climate Assemblies and Environmental Governance at the 2022 Conference of the European Consortium of Political Research (ECPR) in Innsbruck. Two research collections galvanised in that encounter. One is the Special Issue *Citizens' Assemblies in Climate Governance: An Analysis of Barriers and Enablers for Change*, forthcoming in the journal *Environmental Science and Policy*. The other one is this book, made possible by 25 authors who contributed chapters and peer reviews. We thank the ECPR Standing Group on Democratic Innovation for creating a collegial, critical and stimulating research environment where projects like this can emerge.

Various networks have also provided valuable spaces for sharing research and practice along the way: Knowledge Network on Climate Assemblies, Democracy R&D, Red Delib (Spain), and the UK PSA Participatory and Deliberative Democracy Specialist Group.

We are also thankful to our students, academic colleagues, and research partners around the world, and in particular from Politics and International Relations, School of Social and Political Sciences, at the University of Edinburgh; and the School of Geography, Politics, and Sociology at Newcastle University. We want to note a special thanks to Novieta H. Sari for research assistance in the early stages of this project; and to Matthias Thaler for stimulating discussions and inspiration from his book *No Other Planet: Utopian Visions for a Climate-Changed World*.

During our involvement in the field of climate assemblies over the years we have had the opportunity to work with a vibrant community of practice including assembly members, researchers, organisers, facilitators, officials, activists, expert witnesses and stakeholders across various countries, policy areas and levels of governance. We thank them for the learning and collaboration, and we hope this book is helpful as part of our collective efforts to advance the field.

Finally, as ever, we are profoundly grateful to our partners Paula and Lindsey for their love and support.
