Preface to the second edition — VII

Introduction — IX

Part I: Prerequisites

1 Schemes — 3

- 1.1 Sheaves — 3
- 1.2 Ringed spaces — 5
- 1.3 Schemes — 6

2 Simplicial sets — 12

3 ∞ -categories — 16

- 3.1 Motivation — 16
- 3.2 Foundations — 18
- 3.3 ∞ -topos — 21
- 3.4 ∞ -categorical Grothendieck construction — 25

4 Model categories — 27

- 4.1 Model categories — 27
- 4.2 Cofibrantly generated model categories — 32
- 4.3 Combinatorial model categories — 33
- 4.4 Monoidal model categories — 34
- 4.5 Simplicial model categories — 35
- 4.6 Localization of model categories — 37
- 4.7 A result on functor categories — 40
- 4.8 Homotopy limits and colimits — 40
- 4.9 Reedy structures — 41

Part II: **Derived algebraic geometry**

- 5 Introduction — 51**
- 6 Stacks on simplicial sites — 53**
- 7 Stacks on model sites — 58**
- 8 Stacks on Segal sites — 64**
- 9 Application: étale derived stacks — 69**

Part III: **Spectral algebraic geometry**

- 10 Introduction — 75**
- 11 ∞ -operads — 77**
- 12 Spectra — 81**
- 13 $\mathbb{E}_\infty$ -ring spectra — 83**
- 14 Spectral Deligne–Mumford stacks — 85**
- 15 Spectral Artin representability — 88**
 - 15.1 Noetherian $\mathbb{E}_\infty$ -rings — **88**
 - 15.2 $\mathrm{Spec} R$ — **89**
 - 15.3 On being locally almost of finite presentation — **90**
 - 15.4 Properties of functors $X : \mathrm{CAlg}^{\mathrm{cn}} \rightarrow \mathcal{S}$ — **92**
 - 15.4.1 Nilcompleteness — **92**
 - 15.4.2 On being infinitesimally cohesive — **92**
 - 15.4.3 On being integrable — **92**
 - 15.4.4 Cotangent complex — **94**
 - 15.5 Quasi-coherent sheaves — **95**
- 16 Representation theory of formal moduli problems — 97**
 - 16.1 Formal moduli problems — **97**
 - 16.2 Quasi-coherent sheaves on formal moduli problems — **97**

17 Relations between quasi-coherent sheaves — 100**Part IV: Applications****18 A dual representation in spectral algebraic geometry — 107**

- 18.1 Introduction — 107
- 18.2 Dual representation — 109
- 18.2.1 Dual representation for spectral DM stacks — 109
- 18.2.2 Dual representation for geometric stacks — 110
- 18.2.3 Variants — 111

19 A Connection SAG-DAG — 114**20 Motifs in DAG — 117**

- 20.1 Introduction — 117
- 20.2 Construction — 119
- 20.3 Statement of the theorem and proof — 123
- 20.3.1 dSt preserves equivalences — 123
- 20.3.2 dSt satisfies hyperdescent — 124
- 20.3.3 dSt preserves finite products — 135

21 Introduction to a category of derived motivic spectra — 136

- 21.1 Introduction — 136
- 21.2 From embeddings to comparison theorems — 139
- 21.2.1 Concrete realization vs. abstraction — 139
- 21.2.2 Embeddings — 140
- 21.2.3 Manifestations/extrinsic representations — 142
- 21.2.4 A study of cohomology – deconstruction — 143
- 21.2.5 Shift from cohomology to studying derived categories — 143
- 21.2.6 Categories of motives — 144
- 21.2.7 Realization functors — 145
- 21.2.8 Comparison functors — 146
- 21.3 Abstraction of a category of motivic spectra — 147
- 21.3.1 General form of reductions — 147
- 21.3.2 Multilayered diagrams of categories — 147
- 21.3.3 Abstraction of a category of coefficients — 149
- 21.4 Construction of a category of derived motivic spectra — 150
- 21.4.1 Khan’s construction — 150
- 21.4.2 Generalization — 151
- 21.4.3 The category of derived motivic spectra — 151

22 Goodwillie calculus and geometric stacks — 160

- 22.1 Introduction — 160
- 22.2 Goodwillie calculus — 162
- 22.3 Geometric stacks — 165
- 22.3.1 General context — 165
- 22.3.2 Representability theorem — 167
- 22.4 The bridge — 172
- 22.4.1 Similitudes in towers — 172
- 22.4.2 Analyticity and obstruction theory: a study — 174
- 22.5 Parallel results — 176
- 22.5.1 Polynomial approximations — 176
- 22.5.2 Pointwise approximations — 178
- 22.5.3 Reconstruction theorem — 179
- 22.6 Taking stock – general theory — 180
- 22.6.1 Convergence of the Taylor tower — 180
- 22.6.2 Convergence of the tower for stacks — 181
- 22.6.3 Abstraction — 182

23 Spectral “schematization” of homotopy types — 185

- 23.1 Introduction — 185
- 23.2 Part I: Algebraic Topology — 189
- 23.2.1 Generalized homotopy groups — 189
- 23.2.2 Properties of homotopy groups of maps — 191
- 23.2.3 Colimits — 195
- 23.2.4 Generalized Freudenthal suspension theorem — 196
- 23.2.5 Base change — 198
- 23.3 Part II: Algebraic Geometry — 198

24 Higher Galois for Segal topos — 201

- 24.1 Introduction — 201
- 24.2 Grothendieck’s take on Galois theory — 202
- 24.3 Grothendieck’s Galois theory for Segal topos — 203
- 24.4 Natural phenomena — 209

25 Infinity-topoi and natural phenomena: generation — 212

- 25.1 Introduction — 212
- 25.2 Higher categories — 213
- 25.2.1 Segal categories — 213
- 25.2.2 ∞ -categories — 214
- 25.2.3 Simplicial categories — 215
- 25.3 Localizations — 215
- 25.3.1 Bousfield localization — 215

25.3.2	Simplicial localizations — 216
25.3.3	Higher topoi — 217
25.3.4	Local model structures — 218
25.3.5	Segal category of derived stacks — 220
25.4	From Segal topoi to ∞ -topoi — 220
25.5	Subobject classifiers — 221
26	Segal topoi and the universality of physical laws — 224
26.1	Introduction — 224
26.2	Contravariant model structure on $(\text{Set}_\Delta)_{/K}$ — 225
26.3	Unmarked Quillen equivalence — 226
26.4	Marked simplicial sets — 227
26.5	Marked Quillen equivalence — 229
26.6	Simplicial localization of Set_Δ^+ — 231
26.7	Equivalence of models for natural phenomena — 232
26.7.1	Isomorphism of Segal categories of prestacks — 232
26.7.2	Statement of the theorem — 234
26.7.3	Determining K in $L(\text{Set}_\Delta^+)_{/K}$ — 235
26.7.4	Natural phenomena — 236
27	Internal Bousfield localizations — 237
27.1	Introduction — 237
27.2	Construction — 239
27.2.1	Preserving equivalences — 240
27.2.2	Monoidal structure — 241
27.2.3	Covers — 247
27.3	Foundational results — 249
27.3.1	Elementary results — 249
27.3.2	Yoneda — 250
27.3.3	Localization with respect to Γ produces prestacks — 251
27.3.4	Internal Hom is fibrant — 252
27.3.5	Simplicial resolution — 255
27.3.6	Equivalence of internal homotopy function complexes — 256
27.4	The cardinal γ in the proof of Proposition 4.5.1 — 256
27.5	Results needed for an internal left Bousfield localization — 258
27.6	Internal left Bousfield localization — 263
27.7	Results needed in the proof of Theorem 5.1.1 — 264
27.8	Internal right Bousfield localization — 266
28	Supersymmetric derived stacks — 267
28.1	Introduction — 267
28.2	Simplicial superalgebra — 268

28.2.1	Super-algebra — 268
28.2.2	Diagonal super-algebra — 271
28.2.3	Simplicial generalization — 276
28.3	Prehomotopical algebraic context — 292
28.3.1	$sk\text{-sMod}_*$ symmetric monoidal model category — 292
28.3.2	Assumption 1 — 294
28.3.3	Assumption 2 — 295
28.3.4	Assumption 3 — 298
28.3.5	Assumption 4 — 298
28.4	Bigraded derived algebraic stacks — 298
28.4.1	Finitely presented morphisms — 298
28.4.2	Bigraded derivations and cotangent complexes — 299
28.4.3	Étale morphisms — 301
28.4.4	Descent on supermodules — 303
28.4.5	Étale model topology — 304
28.4.6	Bigraded simplicial presheaves — 308
28.4.7	Bigraded left Bousfield localization — 309
28.4.8	Model category of prestacks $M^\wedge$ — 310
28.4.9	Hyperdescent — 311
28.4.10	Local equivalences — 313
28.4.11	Truncations — 315
28.5	Supersymmetric stacks — 315
28.5.1	Ordinary supersymmetry — 316
28.5.2	Supersymmetric maps — 317
29	Taking stock – Physical Mathematics — 320
29.1	Introduction — 320
29.2	Building up the base Segal topos — 322
29.3	Dynamics — 324
29.3.1	States and operators — 324
29.3.2	Iterative shifts — 330
29.3.3	Remarks on higher deformations — 331
29.3.4	Quantum deformations — 332
29.4	Cusps — 333
29.4.1	Formal construction of the tangent complex — 334
29.4.2	Derivations — 335
29.4.3	Mapping spaces — 335
29.4.4	Generalized categories and generalized functors — 336
29.4.5	Cotangent set — 339
29.4.6	Alternate simplicial formalism — 341
29.4.7	Connections between cubic and Set-based formalisms — 342
29.5	Strings — 344

Bibliography — 349

Index — 353

Notations — 359
