Acknowledgements — VII

Introduction and challenge — 1

Basics — 3

1 Getting hands on Python — 4

2 Using virtual environments — 6

3 Configuring your integrated development environment — 9

4 Having a GitHub account — 12

5 Creating repositories for dedicated projects — 14

6 Synchronizing GitHub desktop — 16

7 Knowing basic markdown — 19

Organization — 21

8 Having the overall concept sketch in mind — 25

9 Initializing a project with poetry — 27

10 Tracking the environment — 30

11 Getting your paths right — 32

12 Preparing to share — 35

13 Writing convenience functions — 38

14 Using TOML files for configuration — 41

15 Getting used to testing — 43

Interfacing with common data formats — 47

- 16 Reading Excel files — 48**
- 17 Reading text files — 51**
- 18 Reading text from Word files — 54**
- 19 Reading tables from Word files — 57**
- 20 Reading PDF files — 59**
- 21 Parsing website contents — 61**
- 22 Leveraging regular expressions — 64**
- 23 Writing to a database — 67**
- 24 Reading from a database — 71**

Planning experiments and/or building on legacy data/information — 77

- 25 Leveraging existing experiments — 78**
- 26 Planning experiments — 81**
- 27 Using legacy and planned experiments hand in hand — 87**

Collecting experimental data / lab work phase — 93

- 28 Using dedicated modules - use what's available — 94**
- 29 Using dedicated modules - build what's missing — 99**

Visualization of experimental results — 103

- 30 Simplicity of matplotlib — 105**
- 31 Creating a custom matplotlib style — 109**
- 32 Convenience of seaborn — 112**

33	Interactivity of <code>plotly</code> —	115
34	Representing multidimensional data —	118
35	Representing multidimensional data in a funny way —	124
Approaching the scientific questions (modeling and recommendation) —		131
36	Picking relevant data and information —	132
37	Building a model with <code>gplearn</code> —	138
38	Playing with the model or “what if” —	145
39	Playing with the model or - <code>jupyter</code> notebook —	153
40	Playing with the model or - <code>voila</code> —	157
41	Playing with the model or - <code>streamlit</code> —	160
42	Dealing with too few experiments —	166
43	Solving the reverse problem applying multiobjective optimization —	173
44	Ensuring the envisioned causality —	180
Sharing the project —		187
45	Building files for distribution —	188
46	Pushing to package indices —	190
47	Sharing <code>streamlit</code> applications —	193
Further reading —		197
48	Ensuring code styling via <code>black</code> —	198
49	Configuring pre-commit —	201
50	Building standalone solutions via <code>PyQt</code> —	204

Concluding remarks — 207

List of Figures — 211

Index — 215
