Introduction — 1

1 And the word was life — 4

- 1.1 What is life? — 4
- 1.2 The emergence of biology — 5
 - 1.2.1 Motion, finalism, and self-essentiality: Aristotle — 5
 - 1.2.2 Causative science: Francis Bacon — 6
- 1.3 Life is what is happening — 8
 - 1.3.1 The cell and the organism — 8
 - 1.3.2 Inheritable instructions — 9
 - 1.3.3 Wholeness and the development of organisms — 10
 - 1.3.4 Hierarchical structure of life — 11
- 1.4 Toward the physics laws of life — 13
- 1.5 Schrödinger's theory of life — 14
 - 1.5.1 Energy and information — 15
 - 1.5.2 Negative entropy — 16
- 1.6 Life is simply what biologists' study — 18
 - 1.6.1 Species — 18
 - 1.6.2 The primary classifications of life — 20
 - 1.6.3 Symbiotic hypothesis of the emergence of eukaryotic life — 21
 - 1.6.4 The variety — 22
 - 1.6.5 The outsiders — 23
- 1.7 Models and model organisms — 24
 - 1.7.1 Generalizations and abstractions — 24
 - 1.7.2 Helpful abstractions — 25

2 Energetics of living — 29

- 2.1 Special features of living systems — 29
 - 2.1.1 Open systems and equilibrium — 29
 - 2.1.2 A bubble of life: the role of compartments — 30
- 2.2 Gibbs free energy — 32
 - 2.2.1 Free energy and the irreversibility of life processes — 32
 - 2.2.2 Gibbs free energy and coupling of processes — 34
- 2.3 The mechanisms that facilitate chemical processes in living systems — 37
 - 2.3.1 Enzymes and catalytic cycles — 37
 - 2.3.2 Compartmentalization — 42
- 2.4 Energy for living — 44
 - 2.4.1 Heat: the amount of heat produced by an organism and McCulloch's concept — 44

2.4.2	Hidden energy —	44
2.4.3	Electrical forces: step by step —	45
2.4.4	Electron transfer at the molecular level —	48
2.5	Freed energy capture and storage —	48
2.5.1	How can the electrical energy be captured? —	48
2.5.2	The chemiosmotic hypothesis —	49
2.5.3	How can the energy of the proton gradient be utilized? —	50
2.5.4	ATP synthase —	52
2.5.5	Regulating the flow —	55
2.5.6	ATP balance —	56
2.5.7	Oxidative phosphorylation is not the only way to generate ATP, but it is the most efficient —	57
2.6	How is stored energy used? —	58
2.7	Light energy and the origin of organic hydrogen in biological systems —	60
2.8	Ecological aspects of respiration —	62
3	Structures: “order from order” —	71
3.1	System —	71
3.2	Aperiodic crystal: order from order —	73
3.2.1	From gene to protein: the consistency of information transfer —	73
3.2.2	The code —	75
3.2.3	Protein translation —	77
3.2.4	Regulation of information flow —	80
3.3	“Islands in the stream” or dynamical aspects of protein folding —	82
3.4	From molecular asymmetry to cell movement —	85
3.4.1	Asymmetry at molecular level —	85
3.4.2	Cytoskeleton components —	86
3.4.3	Cytoskeleton in action: <i>Brownian ratchet</i> —	88
3.4.4	Cytoskeleton in action: molecular motors —	90
3.4.5	Chemo-mechanical energy transduction and cooperativity —	92
3.5	Structure and function —	93
3.5.1	Actomyosin and contraction —	93
3.5.2	Tubulin and the cell shape —	95
3.5.3	Cytoskeleton and evolution —	96
3.6	Principle of structural coupling: structure as a catalyst —	97
4	Structures arising from fluctuations: “order from disorder” —	103
4.1	Stochastics and directionality —	103
4.2	Dissipative structures —	104
4.3	Nonlinearity and systems far from equilibrium —	107
4.4	Temporal dissipative structures —	110

4.5	Spatiotemporal dissipative structures — 112
4.5.1	Aggregation of <i>Dictyostelium discoideum</i> — 112
4.5.2	The Belousov-Zhabotinsky reaction — 115
4.6	Turing structures — 119
4.7	The theory of dissipative structures — 125
4.7.1	Ilya Prigogine's insights — 125
4.7.2	Function of dissipation and synergism of processes — 126
4.7.3	Order from order and disorder — 127
5	Balancing far from equilibrium: dynamics of life processes — 133
5.1	Theoretical basis — 133
5.1.1	General approach to the analysis of dynamical processes — 133
5.1.2	Visualizing trends toward stability — 134
5.1.3	Parametric regulation and a catastrophe theory — 137
5.2	Qualitative methods of analysis for systems of differential equations — 140
5.2.1	The canonical model of Lotka-Volterra — 140
5.2.2	Types of steady states and phase portraits — 143
5.2.3	Stability of a steady state — 144
5.2.4	Zones of stability — 147
5.2.5	Qualitative analysis of the canonical Lotka-Volterra model — 149
5.2.6	Limit cycle and the Anna Karenina principle — 152
5.2.7	Limit cycle and sustainability of the BZ reaction — 154
5.3	Thermodynamics of the transition between steady states — 155
5.4	Qualitative analysis of a spatially distributed dynamical system — 158
5.5	Stochastic processes — 161
6	Triggers and dynamical switches — 167
6.1	Bistability — 167
6.1.1	The concept of bistability — 167
6.1.2	Bistability in antagonistic interactions: one winner — 169
6.1.3	Cell heterogeneity as a trigger of structural instability — 170
6.2	Functional triggers — 172
6.2.1	Actomyosin machine and bistability — 172
6.2.2	Regulatory switches at the level of transcription: the Jacob and Monod model — 173
6.3	Dynamic regulation and triggering properties of enzymatic systems — 177
6.3.1	Cooperative dynamics — 177
6.3.2	Lessons from hemoglobin — 180
6.3.3	Substrate transport as part of enzymatic dynamics — 183
6.4	When a system oscillates — 187

6.5	Cell cycle: triggers and oscillations —	194
6.5.1	What is the cell cycle? —	194
6.5.2	The simplest (yet not simple) models of the eukaryotic cell cycle —	198
6.5.3	John Tyson's model —	200
6.5.4	The role of compartmentalization —	203
6.6	General thoughts —	204
7	Connectivity in biological systems —	211
7.1	So, what does it take to be a living system? —	211
7.2	Networks —	212
7.3	Data and databases —	214
7.4	Metabolic networks —	216
7.4.1	Metabolic pathways —	216
7.4.2	Metabolic fossils —	219
7.4.3	Homeostatic biochemistry —	224
7.5	Cell signaling —	225
7.6	Protein interaction networks —	227
7.6.1	Glycolysis in the net —	227
7.6.2	Gene ontologies —	228
7.6.3	Fishing for relevant functions —	231
7.6.4	Integration of the data and predictability of the networks —	234
7.7	Topological properties of biological networks —	236
7.7.1	The quantitative characteristics of biological networks —	236
7.7.2	Power law —	238
7.7.3	Topological constraints —	241
7.7.4	Evolution of connectivity and phase transitions —	243
8	Multicellularity and organism development —	250
8.1	Positional information —	250
8.1.1	The concept of the morphogenetic gradient —	250
8.1.2	The mechanisms —	254
8.2	Morphogenic gradient and scaling —	256
8.2.1	Is there a blueprint? —	256
8.2.2	Mathematical modeling of positioning and scaling —	260
8.3	Cell movement during development —	264
8.3.1	The conservative aspects of metazoan development —	264
8.3.2	Gastrulation in the chick embryo —	266
8.4	Micromechanics of development —	269
8.5	<i>Dictyostelium discoideum</i> : modeling the simplest developmental process —	271
8.6	Different organisms, common mechanisms —	277
8.7	The coevolution of development and viable multicellularity —	281

8.7.1	The closest relatives —	282
8.7.2	What is missing? —	283
8.7.3	The molecular aspects of diploidy and evolution of multicellularity —	285
8.7.4	Exception that proves the rule —	286
9	Evolution —	293
9.1	General notes on natural selection —	293
9.1.1	Variation —	293
9.1.2	Natural selection —	294
9.1.3	Modularity and homologous structures —	295
9.1.4	Organism versus species: dualism —	296
9.2	Evolution briefly: the already familiar model, <i>Dictyostelium discoideum</i> —	299
9.2.1	Cellularity —	299
9.2.2	One versus many —	299
9.2.3	Colonies: between an organism and a population —	303
9.3	Protein universe —	304
9.3.1	Are we there yet? —	304
9.3.2	Genomic landscape —	307
9.4	Populations and species —	309
9.4.1	Biosphere and ecosystems —	309
9.4.2	From adaptive plasticity to functional specialization —	310
9.5	Sexual selection —	312
9.5.1	The choice and aesthetics —	312
9.5.2	The role of the two sexes in the selective conservation of genomic information —	315
9.5.3	Hidden qualities and social evolution —	318
9.6	Evolution of evolution —	319
9.6.1	Uneven pace of evolution —	319
9.6.2	Evolutionary dynamics of DNA structure —	320
9.7	Principles of evolution and the emergence of life —	323
9.8	Information and evolution —	327
9.8.1	Free energy, information, and evolution —	327
9.8.2	The essentiality of the information —	329
9.8.3	Crosstalk between micro- and macro-information —	330
9.9	Consciousness and concluding remarks —	331
