List of Figures

Fig. 1: The affective space in the Circumplex model. —— **6**

Fig. 2: Overview of possible relations between valence and arousal: (a) independence, (b) positive linear relation, (c) negative linear relation, (d) symmetric V-shaped relation, (e) asymmetric V-shaped relation including both positivity offset and negativity bias, and (f) an inverted V-shaped relation when valence is a function of arousal. (2013), "The Relation Between Valence and Arousal in Subjective Experience", in: *Psychological Bulletin* 139 (4), 917–940. —— **9**

Fig. 3: The two-factor structure of affect. Copyright © 1985 by American Psychological Association. Reproduced with permission. Watson, D. and Tellegen, A. (1985), "Toward a Consensual Structure of Mood", in: *Psychological Bulletin* 98 (2), 219–235. —— **18**

Fig. 4: A semantic structure of affect. The letters x and y represent semantic components: x = pleasantness; y = activation. Copyright © 1998 by American Psychological Association. Reproduced with permission. Barrett, L.F. and Russell, J.A. (1998), "Independence and Bipolarity in the Structure of Current Affect", in: *Journal of Personality and Social Psychology* 7 (4), 967–984. —— **19**

Fig. 5: The bivariate evaluative plane. Copyright © 1994 by American Psychological Association. Reproduced with permission. Cacioppo, J.T. and Berntson, G.G. (1994), "Relationship Between Attitudes and Evaluative Space: A Critical Review, With Emphasis on the Separability of Positive and Negative Substrates", in: *Psychological Bulletin* 115 (3), 401–423. —— **21**

Fig. 6: The smiling face with tear. According to Emojipedia, it "can be used to express a wide range of emotions and expressions including gratitude, tender happiness, an attempt to look happy when actually sad, or smiling through pain. Can also be a response to something that is bittersweet". Source: https://emojipedia.org/smiling-face-with-tear, iOS 17.4. —— **30**

Fig. 7: The first set of manikins from the Self-Assessment Manikin, a widely used tool for assessing experimental subjects' subjective valence (or their perception of a stimulus' valence). Subjects select the manikin that best represents how they feel (or how they feel toward a stimulus), with options ranging from pleasure (left) to displeasure (right). Additional series of stylized figures representing arousal (from calm to tense) and dominance (from submissive to dominant) are also part of the test but are omitted here. Adapted from Bradley/Lang (1994). —— **31**

Fig. 8: The *Affect Circumplex*, first introduced by Russell in 1980, is a popular model for representing affective states according to two bipolar dimensions: arousal (ranging from deactivated to activated) and valence (ranging from displeasure to pleasure). —— **38**

Fig. 9: Happy-Sad and Sad-Happy chimeras. —— **55**
