

# Contents

**Preface — V**

**Foreword — VII**

**About the book — XV**

## **Chapter 1**

### **Developing sustainable hospital healthcare services — 1**

- 1.1 Introduction — **1**
- 1.2 The operational aspects of the healthcare industry and its impact on the environment — **3**
- 1.3 Developing sustainability of rural healthcare hospitals — **5**
  - 1.3.1 Approach for improving community healthcare — **6**
- 1.4 The concept of hospital sustainability — **7**
  - 1.4.1 Healthcare and health system sustainability — **9**
  - 1.4.2 Hospital sustainability — **10**
- 1.5 Sustainability in hospital healthcare facilities — **11**
  - 1.5.1 Evaluation method for sustainable healthcare facilities — **12**
  - 1.5.2 Methods for evaluating sustainability in the Flemish area — **13**
- 1.6 Conclusion — **14**
  - References — **15**

## **Chapter 2**

### **Promoting the adoption of robots in healthcare for sustainability — 20**

- 2.1 Introduction — **20**
- 2.2 Robotics in the healthcare sector — **22**
  - 2.2.1 Robotics for enhancing health and quality of life — **24**
  - 2.2.2 Robotics application in the healthcare sector — **27**
    - 2.2.2.1 IoT for the health sector — **28**
    - 2.2.2.2 Tele-operated humanoid robots — **29**
    - 2.2.2.3 Robotic device for pain relief — **31**
- 2.3 The role of robots in achieving the sustainable development goals (SDGs) — **31**
- 2.4 Sustainable development using soft robotics — **33**
- 2.5 Challenges in the implementation of robotics for healthcare sustainability — **34**
  - 2.5.1 Learning-based adaptability and change — **35**
  - 2.5.2 Socio-emotional intelligence — **36**

2.5.3	Software architecture —	<b>37</b>
2.6	Conclusion —	<b>37</b>
	References —	<b>39</b>

### **Chapter 3**

#### **Design of healthcare sustainability: innovation and challenges — 47**

3.1	Introduction —	<b>48</b>
3.2	Definition and characteristics of sustainability —	<b>50</b>
3.3	Healthcare sustainability: environmental, social, and economic —	<b>52</b>
3.4	Conceptual framework of healthcare sustainability —	<b>55</b>
3.4.1	Indicators of sustainability in the healthcare sector —	<b>57</b>
3.5	Sustainable healthcare design —	<b>60</b>
3.6	Factor affecting sustainability in healthcare —	<b>63</b>
3.6.1	Healthcare lean management —	<b>63</b>
3.6.2	Continuous development —	<b>64</b>
3.6.3	Patient satisfaction —	<b>64</b>
3.6.4	Employee satisfaction —	<b>66</b>
3.6.5	Corporate social responsibility (CSR) —	<b>67</b>
3.7	Innovation in healthcare sustainability as a long-term perspective —	<b>68</b>
3.8	Conclusion —	<b>70</b>
	References —	<b>71</b>

### **Chapter 4**

#### **Healthcare sustainability with artificial intelligence: innovations, benefits, and challenges — 80**

4.1	Introduction —	<b>81</b>
4.2	Implementing AI in healthcare —	<b>83</b>
4.3	Enhanced AI implementation in success factor categories —	<b>85</b>
4.4	The ethical considerations of AI in the healthcare sector —	<b>87</b>
4.4.1	The ethical governance of artificial intelligence (AI) —	<b>89</b>
4.4.2	Ethical governance of artificial intelligence in healthcare —	<b>92</b>
4.5	Advantages of AI in the healthcare field —	<b>94</b>
4.5.1	Enhanced disease diagnosis and early prevention —	<b>95</b>
4.5.2	Data-driven decision-making and resource optimization —	<b>95</b>
4.5.3	Personalized healthcare and research advancements —	<b>96</b>
4.6	Sustainable development of AI in healthcare —	<b>97</b>
4.7	AI for ambitious climate-action goals (SDG 13) —	<b>98</b>
4.7.1	The possible function of AI in climate change mitigation —	<b>99</b>
4.7.2	AI for understanding climate change —	<b>100</b>
4.7.3	Use of AI to deal with climate change —	<b>101</b>
4.8	Conclusion —	<b>102</b>
	References —	<b>103</b>

## Chapter 5

### Additive manufacturing for advancing healthcare sustainability — 112

- 5.1 Introduction — 112
- 5.2 Technologies for additive manufacturing — 114
  - 5.2.1 Inkjet printing (IJP): — 116
  - 5.2.2 Fused deposition modeling (FDM) — 117
  - 5.2.3 Laminate object modeling/manufacturing (LOM) — 119
  - 5.2.4 SLA method or stereolithography — 121
  - 5.2.5 Selective laser sintering (SLS) — 122
  - 5.2.6 Three-dimensional (3D) bioprinting — 124
- 5.3 Environmental sustainability in additive manufacturing — 125
- 5.4 Advances in additive manufacturing for reducing environmental deterioration — 127
  - 5.4.1 Additive manufacturing to reduce resource needs — 129
  - 5.4.2 Reducing waste by using additive manufacturing — 129
  - 5.4.3 Additive manufacturing for supply chain cost reduction — 130
- 5.5 Advantages of additive manufacturing — 131
- 5.6 Current challenges and prospects in healthcare enabled by AM — 134
  - 5.6.1 Tissue engineering and regenerative medicine — 134
  - 5.6.2 Pharmaceuticals/drug delivery — 135
  - 5.6.3 Synthetic organs — 136
- 5.7 Conclusion — 136
- References — 137

## Chapter 6

### Revolutionizing healthcare sustainability through mHealth applications — 146

- 6.1 Introduction — 146
- 6.2 mHealth definition — 148
- 6.3 The significant role of mHealth in patient-centered care — 150
- 6.4 An integrated model for mHealth lifestyle management (MLM) — 152
- 6.5 Multidisciplinary assessment of mHealth sustainability — 153
  - 6.5.1 Economics sustainability — 153
  - 6.5.2 Environmental sustainability — 155
  - 6.5.3 Social sustainability — 157
  - 6.5.4 Behavior sustainability — 158
- 6.6 The global applications of mobile health (mHealth) — 160
  - 6.6.1 Collecting information and monitoring disease — 161
  - 6.6.2 Mobile telemedicine to facilitate treatment — 162
  - 6.6.3 Pandemic monitoring with SMS-based mHealth — 163
- 6.7 Perspective on the sustainability of mHealth — 164

- 6.8 Challenges in the implementation of mobile health (mHealth) in developing countries — **166**
- 6.9 Future directions — **168**
- 6.10 Conclusion — **169**  
References — **170**

## **Chapter 7**

### **Sustainable healthcare system using biomedical engineering — 177**

- 7.1 Introduction — **177**
- 7.2 Biomedical engineering — **180**
- 7.3 Biomedical engineering for healthcare advancements — **182**
  - 7.3.1 Enhancing diversity and equity within the field of science, technology, and biomedical engineering — **186**
  - 7.3.2 Expanding research in underserved regions — **188**
  - 7.3.3 Consider various populations while designing research — **190**
- 7.4 Research aspect in biomedical engineering for healthcare — **192**
- 7.5 The application of biomedical engineering in the context of healthcare — **194**
- 7.6 An outline of healthcare procedures for biomedical engineering education — **198**
- 7.7 Conclusion — **200**  
References — **201**

## **Chapter 8**

### **Developing sustainable healthcare in waste management: a comprehensive approach — 213**

- 8.1 Introduction — **213**
- 8.2 Healthcare waste — **215**
  - 8.2.1 Infectious waste — **216**
  - 8.2.2 Hazardous waste — **216**
  - 8.2.3 Nonhazardous waste — **216**
- 8.3 Environmental impacts of hospital waste — **218**
- 8.4 Composition of healthcare waste (HCW) — **219**
- 8.5 Management of hospital waste — **221**
- 8.6 Sustainable medical waste management — **223**
- 8.7 Comprehensive strategies for healthcare waste disposal, treatment, and management — **225**
- 8.8 Criteria for waste management — **228**
- 8.9 Discussion — **228**
- 8.10 Conclusion — **229**  
References — **230**

**Chapter 9****Measurement of social sustainability in healthcare supply chain management — 236**

- 9.1 Introduction — 237
  - 9.2 Social sustainability development — 239
  - 9.3 Supply chain sustainability via social perspective — 240
  - 9.4 Social sustainability in the healthcare supply chain — 242
  - 9.5 Sustainability dimension and measurement — 245
    - 9.5.1 Economic output — 247
      - 9.5.1.1 Monetary performance — 248
      - 9.5.1.2 Financial health — 249
      - 9.5.1.3 Efficiency — 249
    - 9.5.2 Social output — 250
      - 9.5.2.1 Workplace — 251
      - 9.5.2.2 Community — 252
  - 9.5.3 Environmental output — 252
    - 9.5.3.1 Sources — 253
    - 9.5.3.2 Disposal — 254
- 9.6 Challenges in social sustainability — 255
- 9.7 Conclusion — 256
- References — 258

**Chapter 10****Importance of telemedicine on healthcare sustainability during pandemics — 264**

- 10.1 Introduction — 265
- 10.2 Telemedicine in healthcare — 267
- 10.3 Telemedicine's potential and characteristics in a healthcare sustainability management system — 269
- 10.4 The challenges associated with attaining sustainability — 272
- 10.5 The use of telemedicine to reduce healthcare's carbon footprint — 274
- 10.6 Challenges to telemedicine implementation in healthcare — 276
- 10.7 Telemedicine in healthcare: an important application — 279
- 10.8 Telemedicine's future in healthcare sustainability — 286
- 10.9 Conclusion — 287
- References — 288

**Index — 301**
