Preface — IX

1 Number systems — 1

- 1.1 Sets — 1
- 1.2 Domains — 2
- 1.3 Assumptions in Mathematica® — 7
- 1.4 Quantifiers — 10
- 1.5 Complex numbers — 12
- 1.6 Real numbers — 13
- 1.7 Infinities — 16
- 1.8 Numbers in different bases — 18
- 1.9 Interval arithmetic — 18
- 1.10 Telescoping in Mathematica® — 19
- 1.11 Integers and the Principle of Mathematical Induction — 20
 - 1.11.1 Example — 21
 - 1.11.2 Example — 22
- 1.12 Algebraic equations and algebraic numbers — 30
 - 1.12.1 Example — 34
- 1.13 Non-algebraic equations — 36
- 1.14 Sequences of real numbers and their limits — 37
 - 1.14.1 Example — 42
 - 1.14.2 Example: the number e — 42
 - 1.14.3 Example — 43
 - 1.14.4 Example: the Euler–Mascheroni constant — 44
- 1.15 Supremum and infimum — 45
 - 1.15.1 Example — 48
 - 1.15.2 Example — 51
 - 1.15.3 Example — 53

2 Recursive sequences, discrete dynamical systems and their limits — 55

- 2.1 Example — 59
- 2.2 Example: the Fibonacci sequence — 65
- 2.3 Example — 69
- 2.4 Example: the secant method — 70

3 Series — 74

- 3.1 Sequences and series — 74
- 3.2 The functions Sum and NSum — 76
- 3.3 Absolute convergence — 80
- 3.4 Convergence of series with terms of constant signs — 81

3.4.1	Example —	84
3.4.2	Example —	86
3.4.3	Example —	86
3.5	Convergence of series with terms of non-constant signs —	87
3.5.1	Grouping of terms —	87
3.5.2	Example —	88
3.5.3	Example —	89
3.5.4	Abel's summation formula —	90
3.5.5	Dirichlet's and Abel's tests —	91
3.5.6	Example —	93
3.6	The function SumConvergence —	95
3.6.1	Example —	97
3.7	Riemann's theorem on conditionally convergent series —	98
3.8	The Cauchy product of series —	100
3.9	Divergent series —	101
3.10	Power series —	103

4 Limits of functions and continuity — 109

4.1	Limits of functions —	109
4.2	One-sided limits —	110
4.3	Continuous functions —	114
4.4	Discontinuous functions —	117
4.4.1	Example: the Dirichlet function —	120
4.5	The main theorems on continuous functions —	122
4.5.1	Example —	123
4.5.2	Example —	124
4.5.3	Example —	125
4.6	Inverse functions and their continuity —	127
4.7	Example: recursive sequences and continuity —	130
4.8	Uniform continuity and the Lipschitz property —	131
4.8.1	Example —	133

5 Differentiation — 136

5.1	Difference quotient and derivative of a function —	136
5.2	Differentiation in Mathematica® —	144
5.2.1	Differentiation of expressions using D —	145
5.2.2	Differentiation of functions using Derivative —	147
5.2.3	Algebraic rules of differentiation —	149
5.2.4	Example: user-defined derivative —	150
5.3	Main properties of differentiable functions —	151
5.3.1	Example: global and local extrema —	153
5.3.2	Example —	156

5.3.3	Example: the inverse function of the hyperbolic sine —	159
5.3.4	Example: number of roots of an equation —	161
5.3.5	Example: number of roots of an equation and the Lambert W function —	163
5.3.6	Example: implicit differentiation —	167
5.3.7	Example: the Schwarzian derivative —	168
5.3.8	Example: a tangent line to a curve —	168
5.4	Convex functions —	170
5.4.1	Jensen's inequality —	176
6	Sequences and series of functions —	177
6.1	Power series continued —	177
6.1.1	Example —	178
6.1.2	Example —	179
6.2	Taylor polynomials and Taylor series —	181
6.2.1	Example —	187
6.2.2	Example —	188
6.2.3	Approximating functions by Taylor polynomials —	189
6.2.4	Example: rational approximation of $\sqrt{e}$ —	191
6.2.5	Example: illustration of approximation of functions with Taylor polynomials —	192
6.2.6	Example —	194
6.3	Convergence of sequences and series of functions —	200
6.3.1	Examples: pointwise, uniform and almost uniform convergence of function sequences —	202
6.3.2	Continuity and differentiability of limits and sums —	206
6.3.3	Examples: pointwise, uniform and almost uniform convergence of function series —	210
6.3.4	Example —	212
7	Integration —	215
7.1	Indefinite integrals —	215
7.2	The Risch algorithm —	219
7.2.1	Differential algebras —	220
7.2.2	Example 1: integration of rational functions —	222
7.2.3	Example 2: the Risch algorithm for an exponential extension —	224
7.2.4	Limitations of Mathematica [®] 's integration —	225
7.3	The Riemann integral —	226
7.3.1	Using Integrate and NIntegrate with definite integrals —	233
7.3.2	Riemann sums —	235
7.4	Improper integrals —	237
7.4.1	Integrals over infinite intervals (improper integrals of the first type) —	238

7.4.2	Improper integrals of the first type and infinite sums —	239
7.4.3	Integrals of unbounded functions (improper integrals of the second type) —	243
8	LLMs with Mathematica —	245
8.1	How to use LLMs from within Mathematica®? —	248
8.2	Example 1: Prime[n] vs $5n$ —	252
8.3	Example 2: a question of convergence —	254
8.4	When Mathematica® cannot solve a seemingly simple problem —	255
8.5	Asking about bugs —	257
8.6	More advanced example: the Risch algorithm —	259
8.7	Conclusion —	263

Bibliography — 269

Index — 271
