Preface — V

Section A: Theoretical foundations

Chapter 1

Introduction — 3

Chapter 2

Structure of the atom — 5

- 2.1 Early models of the atom — 5
 - 2.1.1 Thomson model — 5
 - 2.1.2 Rutherford's α -particle scattering experiment — 5
 - 2.1.3 Developments leading to the Bohr's model — 6
- 2.2 Quantum mechanical approach — 7
 - 2.2.1 Quantization and photons — 7
 - 2.2.2 Atomic line spectra — 8
 - 2.2.3 Bohr's model of the hydrogen atom: quantization of electronic structure — 8
 - 2.2.4 Dual behavior of matter (de Broglie equation) — 9
 - 2.2.5 Heisenberg's uncertainty principle — 9
 - 2.2.6 Quantum mechanical model of atom — 10
- 2.3 Characteristics of quantum numbers. Atomic orbitals — 11
 - 2.3.1 Principal quantum number (n) — 11
 - 2.3.2 Azimuthal or orbital angular quantum number (ℓ) — 11
 - 2.3.3 Magnetic orbital quantum number (m or m_ℓ) — 12
 - 2.3.4 Spin quantum number (s or m_s) — 12
- 2.4 Electronic structure of atoms — 13
 - 2.4.1 Aufbau principle — 13
 - 2.4.2 Pauli exclusion principle — 14
 - 2.4.3 Hund's rule of maximum multiplicity — 14
 - 2.4.4 Electronic configuration of atoms — 14
 - 2.4.5 Completely filled and half-filled subshells — 15
- 2.5 Atomic nucleus — 15
 - 2.5.1 Nuclear forces — 16

Chapter 3**Atomic properties and the periodic table — 19**

- 3.1 Genesis of periodic classification — 19
- 3.2 Structure of the periodic table of chemical elements — 20
- 3.3 Periodic trends in properties of elements — 22

Chapter 4**Chemical bonds and the structure of molecules — 30**

- 4.1 Definition and main characteristics of chemical bond — 30
 - 4.1.1 Basic parameters of chemical bonding — 30
 - 4.1.2 Types of chemical bonding — 31
- 4.2 Ionic chemical bond — 31
- 4.3 Covalent bonding — 32
 - 4.3.1 Nonpolar covalent bonds — 32
 - 4.3.2 Polar bond — 32
 - 4.3.3 Dipole moment — 33
- 4.4 Valence bond theory — 33
 - 4.4.1 Types of orbital overlaps — 34
- 4.5 Hybridization — 35
 - 4.5.1 Types of hybridization — 35
- 4.5.2 Valence shell electron pair repulsion theory (VSEPR) — 36
- 4.5.3 Resonance — 37
- 4.6 Molecular orbital theory — 37
 - 4.6.1 Types of molecular orbitals — 38
 - 4.6.2 Bonding in some homonuclear molecules — 39
- 4.7 Intermolecular interactions — 41
 - 4.7.1 van der Waals interactions — 41
 - 4.7.2 Hydrogen bonding — 44

Chapter 5**Complex compounds — 46**

- 5.1 Basic concepts — 46
- 5.2 Nomenclature and main types of complexes — 48
- 5.3 Isomerism — 49
 - 5.3.1 Structural isomerism — 49
 - 5.3.2 Stereoisomerism — 50
- 5.4 Dissociation of complex compounds in solution: stability of complexes — 52
 - 5.4.1 Factors affecting the stability of complexes — 52
 - 5.4.2 Dissociation and stability constants — 53
- 5.5 Chemical bonding in complex compounds — 56
 - 5.5.1 Valence bond method — 56

- 5.5.2 Crystal field theory — 62
- 5.5.3 Molecular orbital method — 68
- 5.5.4 Ligand field theory — 69

Chapter 6

Chemical thermodynamics — 71

- 6.1 Main terms — 71
- 6.2 Basic thermodynamic principles and quantities — 72

Chapter 7

Chemical kinetics — 78

- 7.1 Basic concepts in chemical kinetics — 78
- 7.2 Rate of chemical reactions — 79
 - 7.2.1 Types of rates — 80
 - 7.2.2 Factors affecting the rate — 80
- 7.3 The effect of concentration on the reaction rate — 80
 - 7.3.1 Rate laws — 81
 - 7.3.2 Physical meaning of the rate constant — 81
 - 7.3.3 Determining orders of reactions — 81
- 7.4 The effect of temperature on reaction rate — 83
 - 7.4.1 Energy changes: activation energy — 83
 - 7.4.2 Distribution curves — 83

Chapter 8

Catalysis — 88

- 8.1 Influence of catalysts on the rate of chemical processes — 88
- 8.2 Types of catalysis — 89

Chapter 9

Chemical equilibrium — 92

- 9.1 Features of chemical equilibrium — 92
- 9.2 Influence of conditions on chemical equilibrium — 95

Chapter 10

Disperse systems — 99

- 10.1 General characteristics of disperse systems: classification — 99
- 10.2 Solutions: mechanism of dissolution — 100
- 10.3 Methods of expressing the concentration of solutions — 102
- 10.4 Colligative properties — 103

Chapter 11

Electrolyte solutions — 113

- 11.1 Electrolytes and nonelectrolytes — **113**
- 11.2 pH, acids, bases, and salts — **113**
 - 11.2.1 Acids, bases, and salts — **113**
 - 11.2.2 Water as an electrolyte — **115**
 - 11.2.3 pH measurements and indicators — **116**
- 11.3 Hydrolysis — **118**
 - 11.3.1 Hydrolysis of salts and the pH of their solutions — **118**
 - 11.3.2 Hydrolysis of acidic salts — **120**
 - 11.3.3 Hydrolysis of normal salts obtained by the neutralization of strong acids and multivalent bases — **121**
- 11.4 Solubility product — **122**

Chapter 12

Colloids — 126

- 12.1 Methods for preparation of colloids — **126**
- 12.2 Properties of colloid systems — **128**
 - 12.2.1 Kinetic properties — **128**
 - 12.2.2 Optical properties — **129**
 - 12.2.3 Electrical properties and the structure of lyophobic colloidal particles — **130**
- 12.3 Stability of colloidal solutions — **131**

Chapter 13

Physicochemical analysis — 133

- 13.1 Phase rule and equilibrium — **133**
- 13.2 Freezing mixtures — **138**

Chapter 14

Oxidation-reduction processes — 140

- 14.1 Basic concepts — **140**
- 14.2 Oxidation state — **140**
- 14.3 Types of redox reactions — **141**
- 14.4 Redox reactions and electrode processes: electrochemical cells — **142**
- 14.5 Standard electrode potential — **146**
- 14.6 Electrolysis — **148**
 - 14.6.1 Electrolysis in melts — **149**
 - 14.6.2 Electrolysis in aqueous solutions of electrolytes — **150**

Section B: Chemical elements

Section B.I: Main groups of the periodic table

Chapter 15

Hydrogen — 157

- 15.1 Isotopes of hydrogen — 157
- 15.2 Synthesis — 158
- 15.3 Properties — 159
- 15.4 Use and biological role — 161
- 15.5 Chemical compounds — 162
- 15.5.1 Hydrides — 162
- 15.5.2 Water — 165
- 15.5.3 Hydrogen peroxide — 167

Chapter 16

First main group of the periodic table — 171

- 16.1 General characteristics of s-elements — 171
- 16.2 General characteristics of s-elements of group IA — 172
- 16.3 Properties — 176
- 16.3.1 Physical properties — 176
- 16.3.2 Chemical properties — 177
- 16.4 Chemical compounds — 179
- 16.4.1 Hydrides — 179
- 16.4.2 Oxides — 179
- 16.4.3 Hydroxides — 180
- 16.4.4 Salts — 182
- 16.5 Usage — 185
- 16.6 Biological role — 186

Chapter 17

Second main group of the periodic table — 189

- 17.1 General characteristics of the s-elements of IIA group — 189
- 17.2 Properties — 191
- 17.2.1 Physical properties — 191
- 17.2.2 Chemical properties — 192
- 17.3 Chemical compounds — 196
- 17.3.1 Hydrides — 196
- 17.3.2 Compounds with oxygen — 196
- 17.3.3 Oxides of alkaline earth metals — 198
- 17.3.4 Hydroxides — 199

17.3.5	Salts — 200
17.4	Application — 202
17.4.1	Beryllium — 202
17.4.2	Magnesium — 202
17.4.3	Calcium — 203
17.5	Biological role — 205

Chapter 18

Third main group of the periodic table — 208

18.1	General characteristics of the elements — 208
18.1.1	Occurrence — 209
18.1.2	Physical properties — 209
18.2	Boron and its compounds — 210
18.2.1	Physical and chemical properties — 210
18.2.2	Synthesis — 211
18.2.3	Chemical compounds — 211
18.3	Aluminum and its compounds — 216
18.3.1	Physical properties — 216
18.3.2	Preparation — 216
18.3.3	Chemical properties — 217
18.3.4	Chemical compounds — 219
18.3.5	Application — 224
18.4	Gallium, indium, and thallium — 224
18.4.1	Chemical properties — 225
18.4.2	Chemical compounds — 227
18.4.3	Use and biological role — 228

Chapter 19

Fourth main group of the periodic table — 230

19.1	General characteristics of the elements of IVA group — 230
19.2	Carbon — 231
19.2.1	Allotropy and properties of carbon — 232
19.2.2	Usage and biological role of carbon — 234
19.2.3	Chemical compounds of carbon — 236
19.3	Silicon — 244
19.3.1	General characteristics — 244
19.3.2	Occurrence — 244
19.3.3	Usage and biological role — 245
19.3.4	Preparation — 246
19.3.5	Physical and chemical properties of silicon — 246
19.3.6	Chemical compounds of silicon — 247
19.4	Germanium, tin, and lead — 256

- 19.4.1 Physical and chemical properties — 256
- 19.4.2 Chemical compounds — 259
- 19.4.3 Usage and biological role of germanium, tin, and lead — 262

Chapter 20

Fifth main group of the periodic table — 264

- 20.1 General characteristics of the elements of VA group — 264
- 20.2 Nitrogen — 265
 - 20.2.1 Brief description — 265
 - 20.2.2 Synthesis — 267
 - 20.2.3 Biological role — 267
 - 20.2.4 Chemical compounds — 269
- 20.3 Phosphorus — 285
 - 20.3.1 Brief description — 285
 - 20.3.2 Occurrence and synthesis — 286
 - 20.3.3 Forms of elemental phosphorus — 286
 - 20.3.4 Chemical properties — 287
 - 20.3.5 Use and biological role — 288
 - 20.3.6 Chemical compounds — 290
- 20.4 Arsenic, antimony, and bismuth — 298
 - 20.4.1 Brief description — 298
 - 20.4.2 Occurrence and synthesis — 298
 - 20.4.3 Properties — 298
 - 20.4.4 Use and biological role — 300
 - 20.4.5 Chemical compounds — 300

Chapter 21

Sixth main group of the periodic table — 305

- 21.1 General characteristics of the elements of VIA group — 305
- 21.2 Oxygen — 306
 - 21.2.1 Brief description — 306
 - 21.2.2 Occurrence and synthesis — 307
 - 21.2.3 Biological action of oxygen — 308
- 21.3 Ozone — 310
- 21.4 Chemical compounds of oxygen — 312
 - 21.4.1 Peroxides, superoxides, and ozonides — 314
- 21.5 Sulfur — 316
 - 21.5.1 Brief description — 316
 - 21.5.2 Occurrence and synthesis — 316
 - 21.5.3 Chemical properties — 317
 - 21.5.4 Use and biological role — 318
- 21.6 Chemical compounds of sulfur — 319

21.6.1	Hydrides — 319
21.6.2	Sulfides — 320
21.6.3	Halogenides and oxyhalides — 322
21.6.4	Sulfur compounds with nitrogen — 323
21.6.5	Oxides — 323
21.6.6	Oxoacids — 326
21.6.7	Use and biological role of chemical compounds of sulfur — 332
21.7	Selenium, tellurium, and polonium — 333
21.7.1	Brief description — 333
21.7.2	Occurrence, properties, and synthesis — 334
21.7.3	Use and biological role — 335
21.7.4	Chemical compounds — 335

Chapter 22

Seventh main group of the periodic table — 341

22.1	General characteristics and properties of halogen elements — 341
22.2	Fluorine — 343
22.2.1	Brief description — 343
22.2.2	Synthesis — 344
22.2.3	Use and biological role — 344
22.2.4	Chemical compounds of fluorine — 345
22.3	Chlorine, bromine, and iodine — 347
22.3.1	Synthesis — 347
22.3.2	Properties — 347
22.3.3	Use and biological role — 349
22.3.4	Chemical compounds — 351

Chapter 23

Eighth main group of the periodic table — 363

23.1	General characteristics of the elements of VIIIA group — 363
23.2	Occurrence, properties, and application — 364
23.3	Chemical compounds of xenon — 365
23.3.1	Fluorides — 365
23.3.2	Oxides — 366

Section B.II: Secondary groups of the periodic table

Chapter 24

d-Elements — 371

- 24.1 General characteristics of transition metals — 371
- 24.2 Occurrence and synthesis — 373
- 24.3 Biological role — 375

Chapter 25

First B group — 376

- 25.1 General characteristics — 376
- 25.2 Occurrence and synthesis — 376
- 25.3 Properties, usage, and biological role — 377
- 25.4 Chemical compounds of copper — 380
 - 25.4.1 Cu(II) compounds — 380
 - 25.4.2 Cu(I) compounds — 382
- 25.5 Chemical compounds of silver — 383
- 25.6 Chemical compounds of gold — 384

Chapter 26

Second B group — 386

- 26.1 General characteristics — 386
- 26.2 Occurrence and synthesis — 387
- 26.3 Properties — 388
 - 26.3.1 Properties of zinc and cadmium — 388
 - 26.3.2 Properties of mercury — 389
- 26.4 Use and biological role — 390
- 26.5 Chemical compounds — 392
 - 26.5.1 Chemical compounds of zinc and cadmium — 392
 - 26.5.2 Chemical compounds of mercury — 394

Chapter 27

Third B group — 398

- 27.1 General characteristics — 398
- 27.2 Occurrence — 399
- 27.3 Synthesis — 399
- 27.4 Properties and compounds — 399
- 27.5 Application — 400

Chapter 28

Fourth B group — 402

- 28.1 General characteristics — **402**
- 28.2 Occurrence — **402**
- 28.3 Synthesis — **403**
- 28.4 Physical and chemical properties — **403**
- 28.5 Chemical compounds — **404**
- 28.6 Use and biological role — **406**

Chapter 29

Fifth B group — 408

- 29.1 General characteristics — **408**
- 29.2 Occurrence and synthesis — **408**
- 29.3 Properties — **409**
- 29.4 Chemical compounds — **410**
- 29.5 Use and biological role — **413**

Chapter 30

Sixth B group — 415

- 30.1 General characteristics — **415**
- 30.2 Occurrence and synthesis — **415**
- 30.3 Physical and chemical properties — **416**
- 30.4 Chemical compounds — **418**
- 30.5 Usage and biological role — **422**

Chapter 31

Seventh B group — 425

- 31.1 General characteristics — **425**
- 31.2 Occurrence and synthesis — **425**
- 31.3 Physical and chemical properties — **426**
- 31.4 Chemical compounds of manganese — **428**
- 31.5 Usage and biological role — **432**

Chapter 32

Eighth B group — 434

- 32.1 Iron subgroup — **434**
 - 32.1.1 General characteristics — **434**
 - 32.1.2 Occurrence and synthesis — **435**
 - 32.1.3 Physical and chemical properties — **436**
 - 32.1.4 Chemical compounds — **437**
 - 32.1.5 Usage and biological role — **441**
- 32.2 Platinum metals — **443**

- 32.2.1 General characteristics — **443**
- 32.2.2 Occurrence and synthesis — **444**
- 32.2.3 Physical and chemical properties — **444**
- 32.2.4 Chemical compounds — **445**
- 32.2.5 Usage and biological role — **447**

Chapter 33

Lanthanides and actinides — 449

- 33.1 Lanthanides — **449**
 - 33.1.1 General characteristics — **449**
 - 33.1.2 Occurrence and synthesis — **450**
 - 33.1.3 Properties and chemical compounds — **450**
 - 33.1.4 Usage — **451**
 - 33.1.5 Biological role — **451**
- 33.2 Actinides — **453**
 - 33.2.1 General characteristics — **453**
 - 33.2.2 Occurrence and synthesis — **454**
 - 33.2.3 Properties and chemical compounds — **454**
 - 33.2.4 Usage and biological role — **455**

Index — 457
