Preface — V

1 Introduction — 1

- 1.1 Basic knowledge — 1
- 1.1.1 Necessary contractions in the C_0 -semigroup approach — 2
- 1.1.2 Useful inequalities — 3

2 Qualitative properties for impulsive wave equation: controllability and observability — 7

- 2.1 Classical solution for the first-order impulsive wave equation — 8
- 2.2 Impulse controllability — 12
- 2.3 Impulse observability inequality — 17

3 Viscoelastic wave equation with dynamic boundary conditions — 23

- 3.1 Well-posedness of the problem via Lumer–Phillips theorem — 25
- 3.2 C_0 -semigroup approach and stability — 31

4 Passage from internal exact controllability of beam equation to pointwise exact controllability — 38

- 4.1 Estimation and regularity results near a point — 40
- 4.2 Internal exact controllability of the beams equation — 44
- 4.3 An inverse inequality — 47
- 4.4 Estimates on the controls — 50
- 4.5 The weak* convergence — 51

5 Second-order evolution equations with/without delay — 60

- 5.1 Relation between the decay rate of the energy for systems with/without delay — 62
- 5.2 The exponentially and polynomial rate — 67
- 5.3 Applications for models with interior damping — 68
 - 5.3.1 Wave equation — 68
 - 5.3.2 The multidimensional wave equation — 70
 - 5.3.3 Weakly coupled and partially damped with boundary delay — 76
 - 5.3.4 Euler–Bernoulli beam — 79

6 Euler–Bernoulli beam conveying fluid equation with nonconstant velocity and dynamical boundary conditions — 81

- 6.1 Well-posedness via Lax–Milgram theorem — 82
- 6.2 The influence of the density and velocity on stability — 89

7 Stabilization of dissipative nonlinear evolution models — 98

- 7.1 Nonlinear Petrovsky-wave system — **98**
- 7.1.1 Faedo–Galerkin approach — **100**
- 7.1.2 Stability via multiplier method — **111**
- 7.2 Nondegenerate Kirchhoff system coupled with heat conduction — **119**
- 7.2.1 Unique weak solution — **120**
- 7.2.2 Exponential stability — **127**
- 7.3 Nondegenerate Kirchhoff equation with localized nonlinear damping — **131**

8 Nonlinear Petrovsky-type models — 154

- 8.1 Delayed Petrovsky equation with a nonlinear strong damping — **154**
- 8.1.1 Global solvability in Sobolev spaces — **158**
- 8.1.2 Stability for the energy — **170**
- 8.2 Petrovsky equation with a nonlinear strong dissipation — **179**
- 8.2.1 Well-posedness and regularity — **180**
- 8.2.2 Asymptotic behavior via Lyapunov functional — **188**
- 8.3 Examples — **196**

Bibliography — 199

Index — 201
