Executive summary in German

Zielsetzung und Zusammenfassung des Buches — IX

Executive summary in Polish

Termomodernizacja w świetle strategicznych poglądów na energię i środowisko mieszkaniowe rozszerzone streszczenie książki — XXVII

Chapter 1

Objective and executive summary of the book — 1

- 1.1 Defining the knowledge domain for energy and indoor environment — 2
- 1.2 A gap between energy efficiency intended and achieved in practice — 2
- 1.3 Failure of the first passive house in the world — 3
- 1.4 Failure of the traditional retrofitting approach — 3
- 1.5 The need for retrofitting vision — 3
- 1.6 Improving project vision: integrated design protocol — 5
- 2 Universal building energy and environmental technology — 5
- 3 Universal energy and environmental technology for retrofitting — 7
- 3.1 Multistage construction: Atelier Rosemont in Montreal, Canada — 7
- 3.2 Integration enables new energy supply methodology — 8
- 3.3 The wall heat exchangers: panels or built in situ — 8
- 3.4 Other improvements included in the PTAC technology — 9
- 3.5 Reducing the cost of decarbonization — 10
- 3.6 Invention of a climatic district system to replace the district heating — 11
- 4 The benefits of the proposed approach — 12
- 5 Closure — 13
- References — 14

Chapter 2

The history of environmental control in buildings — 17

- 2.1a Control air infiltration through walls – introduction of building paper — 17
- 2.1b Thermal insulation in the framed cavity — 17
- 2.1c Water vapor retarder on the warm side of the cavity — 18
- 2.1d Vapor retarders became mandatory — 19
- 2.1e Introduction of air/vapor barrier — 19
- 2.2 Environmental control: heat, air, and moisture interactions — 20
- 2.2a Moisture effects – material durability — 20

- 2.2b Heat energy – dynamic performance — 21
- 2.2c Addressing the duality (plurality) — 23
- 2.3 Energy mirage demonstrates the role of thermal mass — 24
- 2.4 The failure of fragmented approach — 25
- 2.4a Improvements in heat, air, and moisture control in cold climates — 25
- 2.4b Energy use in the building systems — 25
- 2.4c The failure of fragmented approach to retrofitting — 26
- 2.5 Evaluation of systems, not materials — 27
- 2.6 Review of the design principles — 27
- 2.7 Key components of “green value” of the building — 31
- References — 33

Chapter 3

Air transport — 35

- 3.1 Air flow through porous materials — 35
- 3.2 Examples of air leakage tests — 35
- 3.3 Air pressure distribution in a building — 36
- 3.4 Development of the current approach — 40
- 3.4.1 Terminology related to air barriers — 40
- 3.4.2 Background to current requirements of airtightness — 40
- 3.4.3 The need to test air flow rates — 42
- 3.4.4 Different air pressure fields — 44
- 3.5 Air leakage of a building — 46
- 3.6 Methods for airtightness testing under field conditions — 49
- 3.6.1 Fan depressurization method EN-ISO 9972 — 49
- 3.6.2 Parallel flow airtightness test — 50
- 3.6.3 Using perturbations and inverse of multizonal flow solutions — 51
- 3.6.4 Gas tracer method — 51
- 3.7 Discussion on air control issues — 52
- References — 54

Chapter 4

Interacting water and vapor flows — 56

- 4.1 Water vapor in the air — 56
- 4.2 Concepts related to moisture in porous materials — 59
- 4.3 Moisture of the material in equilibrium with moist air: sorption isotherms — 61
- 4.4 Diffusion of water vapor through a porous material — 62
- 4.5 Concept of capillarity — 64
- 4.6 Free water intake or rain on a material surface — 64
- 4.7 Moisture retention curves — 68
- 4.8 Construction (built-in) moisture — 72

- 4.9 Interactions between water liquid and vapor phases — **73**
- 4.10 Movement of moisture causes heat transfer — **75**
- 4.11 Thermally driven movement of moisture — **77**
- 4.12 Material characteristics for moisture flow in hygrothermal modeling — **78**
- 4.13 Control of rain penetration — **79**
- References — **81**

Chapter 5

Multidirectional heat flows — 82

- 5.1 Mechanisms of heat flow — **82**
- 5.2 Factors affecting multidimensional heat transfer — **85**
- 5.3 Effect of heat-collecting layers — **85**
- 5.4 Effect of insulation placement — **88**
- 5.5 Effects of boundary conditions and corners — **90**
- 5.6 A concept of thermal insulation efficiency — **90**
- 5.7 Estimating the effect of multidimensional heat flow — **92**
- 5.7.1 Serial and parallel flow models — **92**
- 5.8 Effect of thermal bridges in wall assembly — **93**
- 5.9 Thermal bridging in the steel stud walls — **96**
- 5.10 Thermal bridges and surface condensation — **97**
- 5.11 A closing puzzle — **98**
- 5.12 Closure of chapter — **98**
- References — **99**

Chapter 6

To test or to guess: paradoxes of testing within building science — 100

- 6.1 Do not simplify before you understand, simplify test when you know all critical factors — **101**
- 6.2 Paradox of testing and knowledge — **102**
- 6.2.1 Block of testing (to demonstrate the effect of one factor in different exposures) — **103**
- 6.2.2 Sensitivity analysis (to rate effects of various factors in different exposures) — **104**
- 6.3 An appropriate test method to evaluate the performance of a material under service conditions — **106**
- 6.4 Paradox of material variability — **108**
- 6.5 Paradox of accelerated tests — **110**
- 6.6 Paradox of laboratory or field evaluation — **112**

- 6.7 Paradox of integrated monitoring, and modeling to replace testing — **113**
- 6.8 Closure to chapter — **115**
References — **116**

Chapter 7

Affordable, zero emission, environment retrofitting technology — 117

- 7.1 Problem-solving method related to nature-like thinking — **117**
- 7.2 Looking for a new energy-generating method — **118**
- 7.3 Passive and thermo-active cluster: a universal and affordable retrofitting technology — **119**
 - 7.3.1 Alleviating economic conflict with the two-stage (multistage) construction process — **120**
 - 7.3.2 Energy generation and storage units — **121**
 - 7.3.3 Wall climate controlling unit — **123**
- 7.4 An invention of a district climatic system to replace the district heating — **123**
- 7.5 The benefits of the holistic approach to construction — **124**
- 7.6 Summary of PTAC technology — **125**
References — **128**

Chapter 8

Closure: who could start scientific revolution in retrofitting? — 131

- 8.1 The logic of newly proposed technology — **131**
- 8.2 The critical issue — **132**
References — **133**

Further reading: historic sources of information — 135

About the authors — 139
