Preface (H. STILLER, GDR)	7
--	---

CHAPTER I

Elastic Properties	9
-------------------------------------	---

G. A. EFIMOVA, I. V. ZHUKOV, V. A. KALININ: Spectral approach to determination of longitudinal elastic wave attenuation in rocks at pressures up to 1.5 GPa.	9
T. S. LEBEDEV, V. A. KORCHIN: A method of programmed modelling of thermobaric conditions of the lithosphere for studying mineral matter physical properties	15
I. O. BAYUK, V. A. KALININ: Effective elastic moduli of isotropic rocks at high pressure . .	27
T. S. LEBEDEV, G. Y. NOVIK, V. A. KORCHIN, M. G. SILBERSHMIT, T. K. ZAVORIKINA: Structural transformations of rocks and their effect on changes in elastic properties under different thermobaric conditions	33
MUZ. KH. BAKIEV, A. KH. IBRAGIMOV: Study of P-wave velocity and density of uzbekistan rock samples under high quasi-hydrostatic pressure up to 1.6 GPa	47
E. I. BAYUK, F. M. LEVITOVA: Influence of extreme conditions on the elastic anisotropy of rocks	53
SH. A. BALAKISHIEV, A. B. GASANOV: The comparative analysis of physical properties of alpinotype ultrabasalts in some geologic regions	63
A. B. GASANOV: Indirect indications change of rock deformation at thermodynamic loading	71

CHAPTER II

Electrical Properties	77
--	----

T. S. LEBEDEV, S. I. SHEPEL: Role of water saturation in changes of electric properties of rocks at different <i>P-T</i> -conditions	77
V. KROPÁČEK, M. LAŠTOVIČKOVÁ, M. KOPF: Petro-electrical properties of granulites and ultrabasites of the saxonian granulite massif	87
M. LAŠTOVIČKOVÁ: Laboratory studies of electrical conductivity of rocks in Czechoslovakia in 1981—85	95
E. I. PARKHOMENKO, K. N. DANUKALOV: Evidence of dissociation kinetics of siderites in their electrical and magnetic parameters	99

A. PRALAT: Systems for measurement of rock electrical conductivity in samples of cylindrical form	107
D. FREUND: Permeability from electrical properties — a comparative method for the determination of ultra-low permeability under pressure	117

CHAPTER III

Thermal Properties	123
S. N. EMIROV: Thermal conductivity of certain rocks under high pressures and temperatures	123
U. SEIPOLD: Physical mechanisms affecting the temperature dependence of thermal transport properties of rock samples	127

CHAPTER IV

Magnetic Properties	133
T. S. LEBEDEV, B. Y. SAVENKO: Change in mineral matter remanent magnetization at high P and T	133
A. KAPÍČKA, Z. PODROUŽKOVÁ: Magnetic and mechanical properties of porous rocks under external hydrostatic pressure	143

CHAPTER V

Deformation Properties	149
M. GÁLOS: Mechanical tests to determine rock strength characteristics	149
E. I. BAYUK, N. I. DYAU: Physical properties of rocks in the process of deformation under high pressures	155

CHAPTER VI

Complex Investigations	165
A. FOJTEK, J. ŠVEC, P. MARTINEC, M. KREŠL: Physical properties of heated samples of fine-grained sandstone from coal measures	165
F. EGERER: Investigation of connections among grains of magmatic rocks	177

CHAPTER VII

Phase transitions in Earth materials	185
W. ULLMANN: Phase changes in the upper mantle transition zone	185
S. FRANCK, H. STILLER, W. SEIFERT: Effects of high pressure phase transitions on chemical differentiation	195
V. A. KALININ, I. S. TOMASHEVSKAYA, M. V. RODKIN: The effect of solid phase transformations on the deformation-strength properties of material and their part in seismotectonic processes	205

V. A. KALININ, M. V. RODKIN: The quantitative deep earthquakes Model	212
U. SEIPOLD: The effect of the $\alpha - \beta$ -transition on the thermal diffusivity of quartz-containing rocks	219
A. KRAFT, M. ZIEMANN: Investigation of pressure-induced phase transformations by energy-dispersive X-ray diffraction	223

CHAPTER VIII

Planetary cosmogony and evolution	229
J. LELIWA-KOPYSTYŃSKI, Z. CZECHOWSKI: The growth of planets due to capture of solid grains by single planetary embryo	229
S. FRANCK: On the evolution of the Earth's core	243
Autors' Index	249
