Part I	General basics	15
1	Introduction.....	15
1.1	Definitions	15
1.2	Setting of adhesives and sealants	18
1.3	Commercial importance	20
1.4	References	22
2	Adhesion.....	23
2.1	Wetting of substrates.....	23
2.2	Adhesion forces and mechanisms.....	27
2.3	Adhesion promoters/primers.....	31
2.3.1	Silane adhesion promoters.....	31
2.3.2	Thin, adhesive polymer layers	32
2.3.2.1	Polyacrylic acids.....	32
2.3.2.2	Phenolic resins	32
2.4	References	33
3	Classification of adhesives and sealants.....	34
Part II	Adhesives.....	37
1	Physically setting adhesives.....	37
1.1	Solvent-based adhesives.....	37
1.1.1	Basic principles	37
1.1.1.1	Polymers in solution.....	37
1.1.1.2	Manufacturing and formulation.....	40
1.1.1.3	Application.....	41
1.1.2	Chemistry of solvent-based adhesives	44
1.1.2.1	Polyurethanes (PUR or PU)	44
1.1.2.2	Polychloroprenes	48
1.1.2.3	Nitrile rubbers	51
1.1.2.4	Polyacrylates	53
1.1.2.5	Polyvinyl chloride	55
1.1.2.6	Polyvinyl acetate	56
1.2	Water-based adhesives.....	58
1.2.1	Basic principles sensitive.....	58

A permanent affair.

Visit our new website
www.evonik.com/adhesives-sealants

You are interested in tailor-made solutions and services? You are looking for a key player who assists you to create high performance products for the adhesives and sealants industry? Our experts await your next challenge!

Evonik Industries is one of the major suppliers to the adhesives industry. Based on various chemical platforms we offer products which

enable adhesive manufacturers to enhance their formulations to achieve higher performance and effectiveness. The constantly growing range of products and solutions reflects our innovation and flexibility, the answer to modern market demands.

For further information please visit our website or send an e-mail to: adhesives@evonik.com

Evonik. Power to create.

EVONIK
INDUSTRIES

1.2.1.1	Dispersions - theory and stabilisation	58
1.2.1.2	Formulation of water-based dispersion adhesives	64
1.2.1.3	Application of water-based dispersion adhesives	64
1.2.2	Chemistry of water-based dispersion adhesives.....	67
1.2.2.1	Polyurethanes (PUR or PU)	67
1.2.2.2	Polychloroprenes	71
1.2.2.3	Polyacrylates	73
1.2.2.4	Polyvinyl acetate and derivatives	74
1.3	Hot-melt adhesives	76
1.3.1	Basic principles	76
1.3.1.1	Composition and setting process.....	76
1.3.1.2	Application	79
1.3.2	Chemistry and formulation of hot-melts	84
1.3.2.1	Polyolefins and copolymers	85
1.3.2.2	Polyesters.....	90
1.3.2.3	Polyamides.....	94
1.3.2.4	Block copolymers based on polystyrene	98
1.3.2.5	Acrylates	98
1.3.2.6	Specialty products.....	98
1.4	References	99
2	Reactive adhesives	100

2.2.1	Polyurethanes	105
2.2.1.1	Basic principles	105
2.2.1.2	Structure/property relationships	113
2.2.1.3	Stoichiometric considerations	116
2.2.1.4	Formulation of reactive PUR adhesives	124
2.2.1.4.1	2-component PUR adhesives.....	124
2.2.1.4.2	Moisture-curing, 1-component PUR adhesives	128
2.2.1.4.3	Heat-curing, 1-component PUR adhesives.....	133
2.2.2	Epoxies	137
2.2.2.1	Basic principles	137
2.2.2.2	Structure/property relationships.....	151
2.2.2.3	Stoichiometric considerations	153
2.2.2.4	Formulation of reactive epoxy adhesives	156
2.2.2.4.1	2-component epoxy adhesives	156
2.2.2.4.2	Heat-curing, 1-component epoxy adhesives	159
2.2.2.4.3	UV curing, 1-component epoxy adhesives.....	161
2.2.2.5	Trends.....	162
2.3	Polymerisation adhesives	163
2.3.1	Acrylates	163
2.3.1.1	Basic principles	163
2.3.1.2	Structure/property relationships	166
2.3.1.3	Formulations	167

Natural products
for sustainability

Omyacarb®

Omyabond®

Expertise. Innovative. Sustainable.

Your reliable Partner for Sealants & Adhesives

Omya offers a broad portfolio of calcium carbonate and distribution products together with extensive technical support – worldwide. One single contact to our global distribution network is enough to purchase our products and our partners' material. Profit from our sustainable solutions for virtually any of your applications. We strive for continuous innovation, anticipating your needs of tomorrow.

2.3.1.3.1	2-component acrylic adhesives	167
2.3.1.3.2	Anaerobic acrylic adhesives	172
2.3.1.3.3	Radiation-curing acrylic adhesives	177
2.3.2	Cyanoacrylates	180
2.3.2.1	Basic principles	180
2.3.2.2	Structure/property relationships	182

Portafill H5

the natural alternative to ultrafine coated PCC

Rheology modifier in sealants and adhesives

- High brightness
- Stearic acid treated
- Average particle size 0.5 µm
- Platy morphology 0.1 µm thickness
- High surface area resulting in high yield
