Part I General basics

1	Introduction	11
1.1	Definitions	13
1.1.1	Adhesive and adhesive bonding	13
1.1.2	Sealants	14
1.1.3	Adhesive sealants	14
1.1.4	Wettability	14
1.1.5	Adhesion/cohesion	14
1.2	Classification of adhesives and sealants	15
1.2.1	Classification according to the mechanism of solidification	15
1.2.2	Other classification systems	18
1.3	Economic significance of adhesives and sealants	20
1.4	References	22
2	Adhesion	23
2.1	Adhesion forces and mechanisms	24
2.1.1	Primary valence bonds	24
2.1.2	Secondary valence bonds	28
2.2	Wetting of substrates	31
2.2.1	Surface tension and surface free energy	32
2.2.2	Wetting	33
2.2.3	Surfaces	36
2.3	Improvement of adhesion through pretreatment	40
2.3.1	Primer and thin adhesive polymer layers	41
2.4	References	44

Part II Adhesives

1	Physically setting adhesives	46
1.1	Solvent-based adhesives and sealants	46
1.1.1	Basic principles	46
1.1.2	Manufacturing and formulation	49
1.1.3	Application	50
1.1.4	Chemistry of solvent-based adhesives	54
1.1.5	References	69
1.2	Water-based adhesives and sealants	69
1.2.1	Basic principles sensitive	69
1.2.2	Dispersions – theory and stabilisation	69
1.2.3	Chemistry of water-based dispersion adhesives	77
1.2.4	References	90

Contents

1.3	Hot-melt adhesives	91
1.3.1	Basic principles	91
1.3.2	Chemistry and formulation of hot-melt adhesives	103
1.4	Plastisols	128
1.4.1	PVC plastisol	130
2	Reactive adhesives	133
2.1	Basic principles	133
2.1.1	Resins	133
2.1.2	Fields of application	135
2.1.3	Methods of curing	135
2.1.4	Environmental, health and safety (EHS)	139
2.2	Polyaddition adhesives	140
2.2.1	Polyurethanes	140
2.2.2	Epoxies	195
2.2.2.4	References	243
2.2.3	Polysulphides	244
2.2.3.4	References	247
2.3	Polymerization adhesives	248
2.3.1	Reactive acrylic adhesives	248
2.3.2	2-component acrylic adhesives (MMA adhesives)	253
2.3.3	Anaerobic acrylic adhesives	258
2.3.4	Radiation-curing acrylic adhesives	265
2.3.5	Cyanoacrylate adhesives	268
2.3.6	References	276
2.4	Polycondensation adhesives	276
2.4.1	Phenolic resins	276
2.4.1.5	References	287
2.4.2	Moisture-curing POR hot-melts (polyolefin reactive hot-melts)	287
2.4.2.4	References	289
2.4.3	Silicones and silane-modified systems	289
2.4.3.4	References	299
3	Pressure-sensitive adhesives (PSA)	300
3.1	Basic principles	300
3.2	Pressure-sensitive tapes	303
3.2.1	Construction of pressure-sensitive adhesive tapes	303
3.2.2	Comparison of general properties	305
3.2.3	Manufacturing of tapes	306
3.3	Formulation of the PSA-Compound	308
3.3.1	Solvent-based pressure-sensitive adhesives	309
3.3.2	Water-based PSA	314
3.3.3	Hot-melt PSA	319
3.3.4	UV curing pressure-sensitive adhesives	325
3.4	Evaluation of pressure-sensitive adhesives (general)	332
3.5	New developments	333
3.6	References	333

Part III Future trends and challenges

1	Introduction	335
2	Impact on the adhesives industry	335
2.1	Health and environmental protection	335
2.1.1	Registration of polymers	336
2.1.2	Increased registration requirements	336
2.1.3	New SVHC categories	336
2.1.4	Generic risk management approach (GRA)	336
2.1.5	Mixture assessment factor/mixture allocation factor (MAF)	336
2.1.6	Essential use concept	337
2.1.7	Climate change	337
2.1.8	Impact on the adhesives and sealants industry	337
2.2	Circular economy	338
2.3	References	340

Part IV Adhesives and sealants formulation approach

1	Basic principles	341
1.1	Adhesion properties	342
1.2	Cohesion of adhesives and viscoelasticity	343
1.3	Thermomechanical properties	345
1.4	Properties affected by fillers	346
1.4.1	Processing properties	347
1.4.2	Functional properties	348
1.4.3	General properties of used fillers	351
2	Stress analysis of adhesive joints	356
2.1	Preliminary note	356
2.2	Mechanical loads	356
2.2.1	Static loads	356
2.2.2	Dynamic loads	361
2.3	Analysis of ageing influences	362
2.3.1	Thermal effects	362
2.3.2	Analysis of exposure to different fluids	364
2.4	Anisotropic effects	365
3	Bond design rules and recommendations	366
4	Testing of adhesive and bonded joints	368
4.1	Characterization of adhesives as delivered state	369
4.2	Testing of adhesive and sealants in the solidified state	373
4.2.1	Testing of pure adhesives and solids in the solidified state	373
4.2.2	Destructive testing of adhesively bonded joints	377

Contents

4.3	Testing of pressure-sensitive adhesives (PSA) _____	395
4.3.1	Tack testing _____	395
4.3.2	Peel resistance _____	398
4.3.3	Static shear/creep resistance _____	399
4.3.4	Accelerated aging of pressure-sensitive adhesives _____	399
4.4	References _____	400
