Abstract: New 2-amino-4-aryl-3-(4,5-dihydro-1H-imidazol-2-yl)pyrano[3,2-h]quinolines have been prepared. Their cyclization with triethyl orthoformate, aldehyde, ketone and carbon disulfide afforded the corresponding imidazo[1,2-c]pyrimido[4,5:6,5]pyrano[3,2-h]quinolines. Also, a series of polycyclic heterocyclic containing condensed triazol and triazines have been prepared by cyclization of the hydrazino derivatives with formic acid and carbon disulfide (Scheme-1). Antifungal tests were also performed.

Introduction

The pyran ring system is an interesting class of heterocycles. It has been reported that pyran derivatives exhibit antimicrobial activities(1), growth stimulating effects(2), antifungal and plant growth regulation effects(3), antitumor activity(4), central nervous system activity(5) and hypotensive effect(6). On the other hand, fused pyrimidines were found to possess a wide biological activities such as antimicrobial(7,8), antiparkinsonian(9), leishmanicidal and herbicidal(10) effect. Moreover, quinoline derivatives have found useful application antimicrobial(11), antimalarial(12), cardiovascular and biochemically active compounds(13). In addition to the previously mentioned properties, many imidazoles and triazines are used as therapeutic tools(14-16). As a continuation of our previous work(17-21) and considering the particular interest inherent in the above mentioned properties, we aimed to synthesize the title compounds in the hope that members of them would find interesting biological applications.

Experimental

All melting points are uncorrected. IR (γ , cm^{-1}) spectra were recorded on Nicolet Jeol 205 FTIR. NMR spectra were recorded on an EM-360-200 MHz spectrometers in suitable deuterated solvent using TMS as an internal standard. Mass spectra were recorded on a Jeol JMS 600 instrument. Elemental analysis were determined on a Perkin Elmer 240 microanalyser.

2- Amino -4-aryl-3(4,5 dihydro-1H-imidazol-2-yl)pyrano[3,2-h]quinolines(2a-e)

General Procedure :

A mixture of 1_{a-e} (0.01 mol), ethylenediamine (0.01mol) and p.toluensulfonic acid monohydrate (0.012mol) was heated under reflux for 12h. The reaction mixture was made alkaline with a saturated aqueous solution of sodium carbonate and the precipitate was filtered off and recrystallized from proper solvent.

2,3-Dihydroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines(3_{a-e})

General Procedure :

To a suspension of 2_{a-e} (0.01 mol) in triethyl orthoformate (0.018 mol), was added small of formic acid (0.5 ml), the mixture was heated under reflux for 7h. After cooling to rt the product was collected by filtration and recrystallized from proper solvent.

Scheme 1

2,3,6-Trihydroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines(4_{a-e} - 7_{a-e})**General Procedure :**

To a solution of 2_{a-e} (0.01 mol) and the appropriate aldehyde (0.011 mol) or ketone (0.02 mol) in absolute ethanol (30 ml) was added, the mixture was stirred at 80-100°C in a well stoppered round bottom flask fitted with reflux condenser for 12h. The product was isolated by column chromatograph on silica gel with ethyl acetate / methanol/aq. NH₃(6:2:2) as eluent.

5-Thioxo-2,3,6-trihydroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines(8_{a-e})**General Procedure :**

A mixture of 2_{a-e} (0.001 mol), carbon disulfide (5 ml) in ethanol (50 ml) and two pellets of potassium hydroxide (0.17 g, 0.003 mol) was heated under reflux on water bath for 6h. The solid product obtained was dissolved in water and then acidified with acetic acid and recrystallized from diluted acetic acid.

5-Aryl-4,7-dichloro[1,2,3]triazino[4',5':6,5]pyrano[3,2-h]quinolines(9_{a-e})**General Procedure :**

To an ice cold solution of 1_{a-e} (0.01 mol) in a mixture of acetic acid (20 ml) and hydrochloric acid (10 ml), sodium nitrite (0.01 mol in 10 ml H₂O) was added with stirring for 30 min. and the stirring was continued for 3h. The product was collected and recrystallized from diluted acetic acid.

5-Aryl-7-chloro-4-hydrazino[1,2,3]triazino[4',5':6,5]pyrano[3,2-h]quinolines(10_{a-e})**General Procedure :**

A mixture of 9_{a-e} (0.002 mol) and hydrazine hydrate (2 ml, 98%) in ethanol (30 ml) was heated under reflux for 6h. The product obtained after cooling was filtered off, washed with water and recrystallized from ethanol.

14-Aryl-12-chloro[1,2,4]triazolo[3,4-f][1,2,3]triazino[4',5':6,5]pyrano[3,2-h]quinolines(11a-e).**General Procedure :**

A mixture of 10a-e (0.001 mol) in formic acid (20 ml) was heated under reflux for 8 hr. The reaction mixture was concentrated in vacuo and the solid product was collected, washed with water and recrystallized from methanol.

14-Aryl-12-chloro-3-thioxo[1,2,4]triazolo[3,4-f][1,2,3]triazino[4',5':6,5]pyrano[3,2-h]quinolines(12a-e).**General Procedure :**

A mixture of 10a-e (0.001 mol), carbon disulfide (5 ml) in ethanol (50 ml) and two pellets of potassium hydroxide was heated under reflux for 6 hr. The solid product obtained was dissolved in water and then acidified with acetic acid and recrystallized from diluted acetic acid.

5-Aryl-4-azido-7-chloro[1,2,3]triazino[4',5':6,5]pyrano[3,2-h]quinolines(13a-e).**General Procedure :**

To a well-stirred solution of 10a-e (0.002 mol) in glacial acetic acid (50 ml), a solution of sodium nitrite (1 g in 10 ml water) was added at rt and stirring was continued for 1hr. The solid obtained was filtered off, washed with water and recrystallized from acetic acid.

Results and Discussions

2-Amino-4-aryl-3-(4,5-dihydro-1H-imidazo-2-yl)pyrano[3,2-h]quinolines (2a-e) were prepared by the reaction of the pyranoquinolines 1a-e with ethylenediamine, which serve as intermediate for the synthesis of imidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines.

Thus the reaction of compounds 2a-e with triethyl orthoformate, aldehydes and ketones gave the corresponding 2,3-dihydroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines (3_{a-e}) and 2,3,6-trihydroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-h]quinolines(4_{a-e}-5_{a-e}), while the reaction with cyclic ketones and carbon disulfide gave spiroimidazo[1,2-c]pyrimido[4',5':6,5]pyrano[3,2-

h]quinolines (6_{a-e}-7_{a-e}) and 5-thioxo-2,3,6-trihydroimidazo[1,2-c]pyrimido[4',5':6,5] pyrano[3,2-h]quinolines (8_{a-e}) respectively. The chlorine atom reactivity at C-4 of 9_{a-e} was highlighted by its easy displacement with nucleophilic reagent as hydrazine hydrate to give the hydrazino derivative 10_{a-e} which in turn, proved to be a useful intermediate.

In fact, the triazino derivatives 11a-e and 12a-e were produced from the reaction of 10a-e with formic acid and carbon disulphide, respectively.

In addition, treatment of 10a-e in acetic acid and an aqueous solution of sodium nitrite, at room temperature gave the azido derivatives 13_{a-e}, the structure of which was assigned on the basis of its IR spectra (N₃ stretching at 2140 cm⁻¹), this ruling out the alternative tetrazol structure 13'. All the newly synthesized compounds were tested against three species of fungi, namely, *Aspergillus flavus*, *Aspergillus niger* and *Penicillium chrysogenum* and the data are listed in (Table 2).

Conclusions

This work reports a facile method for the synthesis of tricyclic heterocyclic quinolines as antifungal agents.

Antifungal Activity

The newly synthesized compounds were screened for their antifungal activity against three species of fungi, namely, *Aspergillus flavus*, *Aspergillus niger* and *Penicillium chrysogenum* using the disk diffusion method(22,23) and results of the biological testing are given in Table 2. The data showed that most of the newly synthesized compounds exhibited remarkable effects.
