Asymmetric synthesis of 2-substituted 3-amino-4-cyanopyrroles via a two-step procedure consisting of a S_NV reaction on ethoxymethylenemalononitrile followed by a Thorpe-Ziegler cyclization

Sofia Botsi, Georgia Tsolomiti, Stylianos Hamilakis, and Athanase Tsolomitis*

The Laboratory of Organic Chemistry, The School of Chemical Engineering, The National Technical University of Athens, Athens157 80, Greece
e-mail: tsolom@chemeng.ntua.gr

An asymmetric synthesis of 2-substituted 3-amino-4-cyanopyrroles **5** from a S_NV reaction of optically active α-amino acid esters on ethoxymethylenemalononitrile **1** to the corresponding aminomethylenemalononitriles **3**, followed by a Thorpe-Ziegler cyclization through the asymmetric induction of the lithium enolates **4**, generated from **3** and LTMP as base, is described.

Synthesis Of Novel Dihydropyrazolo[1,5-*C*]Pyrimidin-7(3*h*)-One/-Thione Derivatives

Zülbiye Önal*, Hacer Ceran, Eda Şahin

Department of Chemistry, Erciyes University, 38039, Kayseri, Turkey
e-mail: zulbiye@erciyes.edu.tr

The reaction of 1-amino-5-(4-methylbenzoyl)-4-(4-methylphenyl)pyrimidin-2(1H)-one/-thione (**1**) with various 1,3-dicarbonyl compounds (**2a-h**) afforded moderate to good yields of dihydropyrazolo[1,5-c]pyrimidin-7(3H)-one/-thione derivatives (**3a-h**).

Solid Support Synthesis: A New And Efficient Method For The Facile Synthesis Of Cyclic Alkylphosphonates Under Mild Conditions

Rajesh Kumar, A.K.Gupta, Deepak Pardasani, D.K.Dubey and M. P. Kaushik*

PTD Division, Defence Research & Development Establishment, Gwalior, India
e-mail: mpkaushik@rediffmail.com

Abstract: This article describes solid support synthesis of cyclic alkylphosphonates (CAPs), in which alkyl phosphonicdichlorides were condensed with alkanediols using celite-sodium carbonate as a solid support. The reported synthetic approach has advantages over conventional synthesis in terms of shorter reaction times, high yield, and easy work-up.
Key Words: solid support; alkanediol; alkyl phosphonicdichloride; Chemical warfare agents;Chemical Weapons Convention; cyclic alkylphosphonates

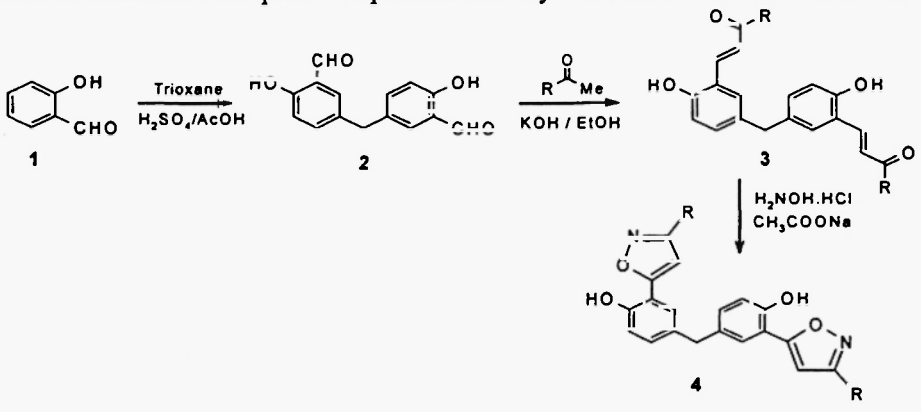
Synthesis of novel methylene-bis-isoxazoles as potential fungicidal agents

Ch. Sanjeeva Reddy* and A. Nagaraj

Department of Chemistry, Kakatiya University, Warangal – 506 009, India.
e-mail: chsrkuc@yahoo.co.in

A series of novel methylene-bis-chalcones 3 was prepared by the Claisen-Schmidt condensation of 5,5'-methylene-bis-salicylaldehye 2 with various acetophenones, subsequent condensation of compound 3 with hydroxylamine hydrochloride gave the corresponding novel methylene-bis-isoxazoles 4 in good yields. Characterization of the new compounds has been done by means of IR, ^{1}H NMR, MS and elemental analyses. All the compounds have also been screened for their antifungal activity and some of them showed quite comparable activity with the standard antibiotics.



Heterocycl. Commun.14 (2008) 295-298

Syntheses Of Novel β-Diketone Derivatives Of Pyrazole

Usha Baloda, Y.C. Joshi, M. P. Dobhal

Department of Chemistry, University of Rajasthan,
Jaipur-302 004 (Raj.), India

Condensation of pyrazole-1-acetyl chloride 1 with acetophenone derivatives 2 in the presence of sodium methoxide in dry methanol led to the formation of various substituted β-diketones 3 (a-l). The structures of these newly synthesized compounds have been established by elemental analysis and spectral studies *viz.* IR, ^{1}H NMR.
