DE GRUYTER

ADVANCES IN CALCULUS OF VARIATIONS publishes high quality original research focusing on that part of calculus of variation and related applications which combines tools and methods from partial differential equations with geometrical techniques.

In particular the journal will include the following topics: existence and regularity for minimizers and critical points; variational methods for partial differential equations; geometrical aspects of calculus of variation: minimal surfaces, harmonic mappings, geometrically motivated flows, curvature equations, quasi-conformal mappings; applications of variational methods to non-linear elasticity, free boundary problems, general relativity; geometric measure theory.

ISSN 1864-8258 · e-ISSN 1864-8266 · CODEN ACVDAS

Contents

Martin Mayer

Prescribing Morse scalar curvatures: Critical points at infinity — 151

Félix del Teso, Juan J. Manfredi, Mikko Parviainen

Convergence of dynamic programming principles for the p -Laplacian — 191

François Dayrens, Simon Masnou, Matteo Novaga, Marco Pozzetta

Connected perimeter of planar sets — 213

Hao Fang, Biao Ma

Constant Q -curvature metrics on conic 4-manifolds — 235

Raffaella Capitanelli, Maria Agostina Vivaldi

Limit of p -Laplacian obstacle problems — 265

Hélène Frankowska, Gioconda Moscariello

Long-time behaviour of solutions to an evolution PDE with nonstandard growth — 287
