DE GRUYTER

ADVANCES IN CALCULUS OF VARIATIONS publishes high quality original research focusing on that part of calculus of variation and related applications which combines tools and methods from partial differential equations with geometrical techniques.

In particular the journal will include the following topics: existence and regularity for minimizers and critical points; variational methods for partial differential equations; geometrical aspects of calculus of variation: minimal surfaces, harmonic mappings, geometrically motivated flows, curvature equations, quasi-conformal mappings; applications of variational methods to non-linear elasticity, free boundary problems, general relativity; geometric measure theory.

ISSN 1864-8258 · e-ISSN 1864-8266 · CODEN ACVDAS

Please see the journal's homepage for Abstracting & Indexing Services information.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/acv.

Contents

Alireza Ataei

Boundary behavior of solutions to fractional p -Laplacian equation — 255

Patrizia Di Gironimo, Salvatore Leonardi, Francesco Leonetti, Marta Macrì

Existence of distributional solutions to some quasilinear degenerate elliptic systems with low integrability of the datum — 275

Morteza Fotouhi, Mohammad Safdari, Henrik Shahgholian
A weakly coupled system of p -Laplace type in a heat conduction problem — 297

Gaocheng Yue, Zixuan Pang, Yangyang Wu

On the interior regularity criteria for the viscoelastic fluid system with damping — 323

Riccardo Scala, Giuseppe Scianna

On the L^1 -relaxed area of graphs of BV piecewise constant maps taking three values — 339

Vanessa Hüsken

On prescribing the number of singular points in a Cosserat-elastic solid — 367

Julian Scheuer

Stability from rigidity via umbilicity — 381

Xi Hu, Lin Tang

Free boundary regularity in the fully nonlinear parabolic thin obstacle problem — 407

Tadele Mengesha, Armin Schikorra, Adisak Seesanea, Sasikarn Yeepo

Calderón–Zygmund theory for strongly coupled linear system of nonlocal equations with Hölder-regular coefficient — 421

Antonín Češík, Giovanni Gravina, Malte Kampschulte

Inertial (self-)collisions of viscoelastic solids with Lipschitz boundaries — 439

Sergio Conti, Adriana Garroni, Michael Ortiz

A discrete crystal model in three dimensions: The line-tension limit for dislocations — 467

Riccardo Cristoferi, Gabriele Fissore

Two-dimensional graph model for epitaxial crystal growth with adatoms — 511

Manuel Schlierf

Global existence for the Willmore flow with boundary via Simon’s Li–Yau inequality — 555

Stefano Almi, Martin Kružík, Anastasia Molchanova

Linearization in magnetoelasticity — 577

Filippo Gaia

The fractional Hopf differential and a weak formulation of stationarity for the half Dirichlet energy — 593
