

CONTENTS

Preludes

List of participants.	105
Picture.	107
Introduction. <i>The Editors</i>	108
Welcome to the Third WET Workshop. <i>S.D. Kawaler, J.C. Clemens</i>	110
International Institute of Theoretical and Applied Physics and the Whole Earth Telescope. <i>J.P. Vary</i>	111
Status of the WET. <i>R.E. Nather</i>	117
WET in China. <i>X.J. Jiang, X.B. Zhang, J.Y. Hu</i>	127

The science of Whole Earth Telescope in general

The status of white dwarf asteroseismology and a glimpse of the road ahead. <i>D.E. Winget</i>	129
WET science – a theorist’s perspective. <i>S.D. Kawaler</i>	137
Perspectives on Whole Earth Telescope science. <i>J.C. Clemens</i>	142
Non-variable stars inside the ZZ Ceti instability strip. <i>S.O. Kepler, O. Giovannini et al.</i>	157
Structure and evolution of white dwarfs. <i>S.O. Kepler, P.A. Bradley</i>	166

DAs and DBs: results and problems

Study of periodicities of the DAV white dwarf G 117-B15A with the Whole Earth Telescope. <i>S.O. Kepler, D.E. Winget et al.</i>	221
---	-----

Multisite observations of the DAV white dwarf R 548 <i>S.O. Kepler, O. Giovannini et al.</i>	238
Whole Earth Telescope observations and seismological analysis of the cool ZZ Ceti star GD 154. <i>B. Pfeiffer, G. Vauclair et al.</i>	245
XCOV12: a report on the L19-2 campaign. <i>D.J. Sullivan</i>	261
G29-38 and asteroseismology of cool DA white dwarfs. <i>S.J. Kleinman</i>	270
HST observations of the DAV white dwarf G 226-29. <i>S.O. Kepler, E.L. Robinson, R.E. Nather</i>	302
The DBV stars: progress and problems. <i>P.A. Bradley</i>	311
GD 358 in 1994: a progress report. <i>R.E. Nather</i>	321

The hottest white dwarfs and prewhite dwarfs

The PNN and PG 1159 connection. <i>S.D. Kawaler</i>	329
Timescale for the variation of the 539 s pulsation mode of PG 1159-035. <i>J.E.S. Costa, S.O. Kepler, D.E. Winget</i>	334
Spectra of GW Vir type pulsators. <i>K. Werner</i>	340
Theoretical and observed periods of the pulsating pre-white dwarfs. <i>M.S. O'Brien</i>	349
NGC 2452: luminosity variations of the PN nucleus? <i>R. Silvotti</i>	355
Variable "cool" central stars of planetary nebulae. <i>G. Handler</i>	357
RXJ 2117+34: preliminary results of the August 1994 WET campaign. <i>P. Moskalik, G. Vauclair</i>	360

From binary stars to white dwarfs

The AM CVn type stars: an overview. <i>J.-E. Solheim</i>	363
Observations of modulation amplitude colors in AM CVn. <i>C.M. Massacand, J.-E. Solheim</i>	378
The secondary star in AM CVn. <i>T.K. Nymark, J.-E. Solheim</i> .	386
Period stability in AM CVn. <i>J.L. Provencal</i>	396

A 3-D SPH model of helium accretion disks in the interacting binary white dwarf systems AM CVn and EC 15330-1403. <i>M.A. Wood, J.C. Simpson</i>	402
The AM CVn trial: the case for superhumps. <i>D. O'Donoghue</i> ..	413

Main sequence stars and other WET targets

Main sequence variables. <i>M. Breger</i>	423
CD-24 7599: new results. <i>G. Handler</i>	434
Models and mode identifications of the δ Scuti star FG Vir. <i>J.A. Guzik, P.A. Bradley</i>	442
Classical novae as WET objects. <i>E.M. Leibowitz et al.</i>	453

Campaigns and targets

Some comments on WET organization and campaigns. <i>D.J. Sullivan</i>	467
Upcoming WET campaign on RE 0751+14. <i>B.N. Ashoka</i>	475

Instrumentation

The WET standard photometer. <i>S.J Kleinman, R.E. Nather, T. Phillips</i>	482
Photometric equipment for WET. <i>R. Kalytis, E.G. Meistas</i>	497
A portable GPS time source for WET use. <i>D.J. Sullivan</i>	510
High speed CCD photometry. <i>D. O'Donoghue</i>	519
WET-type science with CCDs. <i>H.E. Bond</i>	527

Postludes

Summary of the Meeting. <i>R.E. Nather</i>	533
--	-----

Appendix 1

White dwarf data tables. <i>P.A. Bradley</i>	536
--	-----

Appendix 2

Targets for the next WET campaigns. <i>J.C. Clemens</i>	547
---	-----
