

## **A NEW VERSION OF THE BIBLIOGRAPHY CATALOG OF VLBI MAPS OF ACTIVE GALACTIC NUCLEI**

V. Bychkova, L. Gurvits and G. Tsarevsky

*Astro-Space Center of the Lebedev Physical Institute, Russian Academy of  
Sciences, Profsojuznaya st. 84/32, Moscow 117810, Russia*

Received July 20, 1996.

**Key words:** galaxies: radio – databases

The bibliography catalog includes information on VLBI maps of extragalactic sources published from 1965 to 1995 in the main astronomical and astrophysical periodicals and monographs. The catalog contains more than 1500 entries, each corresponding to an original VLBI map. It contains 3 files, two of which include the bibliographical data, and one includes information about the sources and observations. Each entry contains the name of the source, its type, redshift, the epoch and frequency of observation, the standard of registration and references.

The catalog was realized as a database, organized with the program LOTUS 1-2-3 on an IBM-PC.
