

Suppl. Figure 1

Suppl. Figure 1. Number of tests per inhabitants/year performed in Italy (A) or separately in three main geographical regions within the country: Northern (B), Central (C) or Southern (D) Italy.

Suppl. Figure 2

Suppl. Figure 2. Total number of anti-PF4 testing in the period after the VITT uprising and in the three previous years (white columns) compared to the projected progressively increased testing based on the trend in the previous three years (the shaded area represents 95% CI of the regression line).
