DE GRUYTER

CHEMICAL PRODUCT AND PROCESS MODELING (CPPM) is the premier forum for theoretical and applied research on product and process modeling, simulation and optimization. Thanks to its international editorial board, the journal assembles the best papers from around the world on modern modeling, simulation and optimization techniques and it also covers the gap between product and process. The range of topics includes equation-oriented modeling and simulation, sequential and modular simulation, performance of industrial process simulators, computational fluid dynamics, environmental, food, pharmaceutical and fine chemical process modeling. The journal brings together chemical engineering researchers, practitioners, and software developers in a new forum for the international modeling and simulation community. Editors represent top engineering institutions across the globe, such as the University of Tehran, the Ecole Polytechnique de Montreal, Rutgers, Indian Institute of Technology, the Technical University Hamburg, and the University of Buenos Aires.
