Olga BEREŚNIEWICZ-RAJCA: On the schwarzian for the functions of Shah-Tao-shing	307—319
Zbigniew GRANDE: Sur le produit de deux dérivées	321—332
R.K. VOHRA, K.D. SINGH: Some almost analytic vector fields in (f, g, u, v, λ)-structure manifold	333—357
Edward KOCELA: Semi-uniform convergence of a sequence of functions	359—365
Tadeusz KREID: On representations of natural numbers as sums of two squares	367—378
Zofia KAREŃSKA: On some functional equation occurring in the theory of geometric objects	379—391
Wawrzyniec SADKOWSKI: Behaviour of solutions of some non-linear hyperbolic equation	393—408
Alina TEICHERT-GAIDA: On some compound non-linear boundary value problem	409—421
G.S. LINGAPPAIAH: On the generalised inverted Dirichlet distribution	423—433
Jacek WOJTOWICZ: Stability of the difference schemes for the parabolic type equation with the mixed derivative	435—450
Ashok KUMAR: Generalised strong Nörlund summability	451—468
Marian MAJCHROWSKI: Application of the Green function in the theory of pseudoparabolic equations	469—475
Tomasz MARKS: Taylor expansion in the finite element method for a two-point boundary value problem	477—486
Ryszard DESZCZ: On some Riemannian manifolds admitting a concircular vector field	487—495
Irena HORNUNG: Properties of special quasi-potential of surface distri- bution with respect to normal parabolic equation of the second order	497—508
Irreneusz KUBIACZYK: Some fixed point theorems	507—515

Directions for Authors

Papers may be submitted to the Editor in English, French, German or Russian, exceptionally in Polish, and should be typed with double spacing on a good quality paper. Manuscripts in small type cannot be accepted. They should not exceed twenty typed pages. Preferably two copies (original and a ribbon or Xerox copy) should be submitted. Formulas and indices should be written generous spacing and typed if possible; symbols which are not on the typewriter should be inserted by hand in Indian ink. Oblique dash / should not be used in place of parentheses (). Special attention should be paid to distinguishing 1 (number) from 1 (letter). Formulas should be numbered on the left-hand side of the line. The heading of the paper should consist of the author's name followed by surname, in the next line the title of the paper in capitals. Section titles should be written without indentation and underlined. Words such as *theorem*, *lemma*, *proof*, *corollary*, *remark*, *example* should be typed in normal text with a space between letters but without underlining. Footnotes should appear at the bottom of the relevant page separated by a line from the main text. Pages should be numbered in the right upper corner. References to the literature in the text should be numbers enclosed in square braces and should be listed in alphabetical order at the end of the paper.

The bibliography should be cited as follows:

Books: initials and names of all authors (typed with a space between letters), title, place and year of publication.

Articles: initials and names of all authors (typed with a space between letters), full title, the journal as abbreviated in Mathematical Reviews, volume number (in arabic), year in parentheses, first and last page numbers.

The paper should conclude with indication of the author's place of employment and his address.
