|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| A. DEBIŃSKA-NAGÓRSKA, A. JUST, Z. STEMPIEŃ: On some optimisation problem in a set of solutions of nonlinear operator equation in Banach spaces. Galerkin approximation . . . . . | 471–478 |
| R. NIVAS, J.P. SINGH: Invariant submanifolds of a manifold admitting $f_\lambda(2\nu + 3, -1)$ -structure . . . . .                                                              | 479–484 |
| S. N. MISHRA: Some results on common fixed points of compatible mappings                                                                                                         | 485–492 |
| K. RADZISZEWSKI: Reflections in equidistant hypersurfaces II. Geometric characterization of the group generated by reflections . . . . .                                         | 493–502 |
| W. JELONEK: Ruled surfaces in affine differential geometry . . . . .                                                                                                             | 503–510 |
| M. KÜÇÜK, Y. KÜÇÜK: Further properties of almost continuous multifunctions defined between bitopological spaces . . . . .                                                        | 511–522 |
| M. MICHTA: Weak solutions of set-valued random differential equations . .                                                                                                        | 523–528 |
| A. WIŚNIEWSKI: The continuous approximation of measurable mappings .                                                                                                             | 529–531 |
| B. DAMYANOV, B. FISHER: On the neutrix product of distributions on $C^\infty$ -manifolds . . . . .                                                                               | 533–541 |
| Si JIANGUO: On the monotonic continuous solutions of some iterated equation                                                                                                      | 543–547 |
| I. BEG, A. LATIF, T.Y. MINHAS: Some fixed point theorems in topological vector spaces . . . . .                                                                                  | 549–555 |
| S. STOJŃSKI: A note on $H$ -almost periodic functions and $S^P$ -almost periodic functions . . . . .                                                                             | 557–564 |
| C. BAGIŃSKI, I. MALINOWSKA: On groups of order $p^n$ with automorphisms of order $p^{n-2}$ . . . . .                                                                             | 565–575 |
| D. MARCU: A note on trees colouring . . . . .                                                                                                                                    | 577–578 |
| S. MIDURA: On solutions of systems of functional equations determining some subsemigroups of the group $L_6^1$ . . . . .                                                         | 579–590 |
| P. BANDIERI: Geometric group presentations . . . . .                                                                                                                             | 591–601 |
| Lin SHIZHONG, Yu YUANHONG: On the oscillation of solutions of parabolic partial differential equations of neutral type . . . . .                                                 | 603–614 |
| J. GÓRNICKI: Fixed points of asymptotically regular mappings in metric spaces . . . . .                                                                                          | 615–620 |
| J. DZIOK: On a starlikeness problem for certain class of multivalent analytic functions . . . . .                                                                                | 621–628 |
| S. KIELTYKA, S. RABSZTYN: On collision invariants in one dimension . .                                                                                                           | 629–636 |
| A. PETRUŞEL: On a theorem by Roman Węgrzyk . . . . .                                                                                                                             | 637–641 |
| J. BORSÍK: Local characterization of functions with closed graphs . . . .                                                                                                        | 643–650 |
| E. KOŹNIEWSKI: Geometric characterization of line geometry over quadratically complete field . . . . .                                                                           | 651–659 |
| M. A. KHAN, A. H. KHAN: Transformations of mixed hypergeometric series                                                                                                           | 661–666 |
| V. MURSKI: Direct multiplication of finite algebras does not preserve finite equational bases: two examples and a general statement . . . . .                                    | 667–672 |
| J. KREMPA: On global solutions of translation equation . . . . .                                                                                                                 | 673–676 |
