J. KALAS: Stability and asymptotic properties of a $2n$ -dimensional system of differential equations	697–714
M. PIASECKI: A characterization of complex $ALUMD$ Banach spaces via tangent martingales	715–728
H. ORYSZCZYSZYN: On a general theory of ordered trapezium spaces . . .	729–734
G. HERZOG: An existence and uniqueness theorem for ordinary differential equations in ordered Banach spaces	735–740
M. KOCH, R. LEMMERT: Spectral representation and characterizations of locally algebraic linear transformations	741–746
J. BAŠTINEC, J. DIBLÍK: On existence of solutions of a singular Cauchy-Nicoletti problem for a system of integro-differential equations	747–760
A. NICOLAIDE: A new proof of the formulae used in the conjugate gradient method with pre-conditioning for solving large systems of linear equations	761–774
R. TABERSKI: On the strong exponential approximation	775–782
J. ANDRES: A target problem for differential inclusions with state-space constraints	783–790
A. LATIF, I. BEG: Geometric fixed points for single and multivalued mappings	791–800
M. MAKOWIAK: On some bounded solutions of a nonlinear differential equations	801–808
W. KORCZYŃSKI: On a model of concurrent systems	809–828
CH. SCHMOEGER: On a class of generalized Fredholm operators, I	829–842
A. DVUREČENSKIJ, S. S. AHN, H. S. KIM: The Ker-Coker sequence in BCI -algebras	843–850
E. IGNACZAK, A. PASZKIEWICZ: Perturbation of normal operators, vanishing on a given subspace	851–858
M. G. GRAZIANO: Ideals of minimal clans	859–868
A. BORZYMOWSKI, M. SHAIEB: Goursat-type problems containing the normal derivatives of the unknown functions	869–882
M. DRMOTA: q -additive functions and well distribution	883–896
W. KUICH: Cones and abstract families of elements	897–906
E. LEWIŃSKA: L^2 -analysis of finite element eigenfunction approximation with numerical integration	907–918
H. NIEDERREITER, C. XING: Global function fields with many rational places over the quinary field	919–930
V. POPA: On unique common fixed point, for compatible mappings of type (A)	931–936
G. KARIGL: On a graph theoretic description of regular Markov chains and positive linear systems	937–944
A. DEMBIŃSKA, J. WESOŁOWSKI: On characterizing the exponential distribution by linearity of regression for non-adjacent order statistics . . .	945–952
G. BARTUZEL, A. FRYSZKOWSKI: Relaxation of the differential inclusions of the Sturm–Liouville type	953–960
