Z. J. JUREK, J. ROSIŃSKI, W. A. WOYCZYŃSKI: Kazimierz Urbanik and his research . . . . .	219–239
Z. J. JUREK: Remarks on the selfdecomposability and new examples . . . . .	241–250
M. MAEJIMA, J. ROSIŃSKI: The class of type $G$ distributions on $\mathbb{R}^d$ and related subclasses of infinitely divisible distributions . . . . .	251–266
B. MINCER: The existence of one-parameter semigroups and characterizations of operator-limit distributions . . . . .	267–274
T. RAJBA: On multiple decomposability of probability measures on $\mathbb{R}$ . . . .	275–294
NGUYEN VAN THU: Generalized translation operators and Markov processes	295–304
M. BIENIEK, D. SZYNAL: Limiting distributions of differences between some generalized order statistics . . . . .	305–314
R. JAJTE: Few remarks on individual ergodic theorem and summability methods . . . . .	315–320
A. MAKAGON: On a stationary process induced by an almost periodically correlated process . . . . .	321–326
J. MIJNHEER: Some remarks on quadratic forms in stable random variables	327–338
K. MUSIAŁ: The completeness in spaces of bounded Pettis integrable functions and in spaces of bounded functions satisfying the law of large numbers .	339–344
A. PASZKIEWICZ: On the almost sure convergence of all conditionings of positive random variables . . . . .	345–352
P. PAWLAS, D. SZYNAL: Recurrence relations for single and product moments of lower generalized order statistics from the inverse Weibull distribution . . . . .	353–358
A. PLUCIŃSKA, M. BISIŃSKA: Polynomial-Gaussian vectors and polynomial-Gaussian processes . . . . .	359–374
B. RODZIK, Z. RYCHLIK: Almost sure central limit theorems for weakly dependent random variables . . . . .	375–384
J. WESOŁOWSKI: Sketches on dilation probability distributions . . . . .	385–402
P. BILER, G. KARCH, W. A. WOYCZYŃSKI: Asymptotics and high dimensional approximations for nonlinear pseudodifferential equations involving Lévy generators . . . . .	403–413
R. BOBRYK, Ł. STETTNER: A closure method for randomly perturbed linear systems . . . . .	415–424
A. MILIAN: On invariance of linear subspaces for stochastic evolution equations . . . . .	425–430
G. A. REMPAŁA: The martingale decomposition and approximation theorems for a generalized random permanent function . . . . .	431–446
B. JANISZEWSKA, R. RÓŻAŃSKI: Transformed diffeomorphic kernel estimation of hazard rate function . . . . .	447–460
B. KOPOCIŃSKI: Unfinished league season of football . . . . .	461–468
A. ZAGDAŃSKI: Prediction intervals for stationary time series using the sieve bootstrap method . . . . .	469–481
A. JANICKI, Ł. KRAJNA: Malliavin calculus in construction of hedging portfolio for the Heston model of a financial market . . . . .	483–495
M. KOCIŃSKI: Hedging in the CRR model under concave transaction costs	497–512

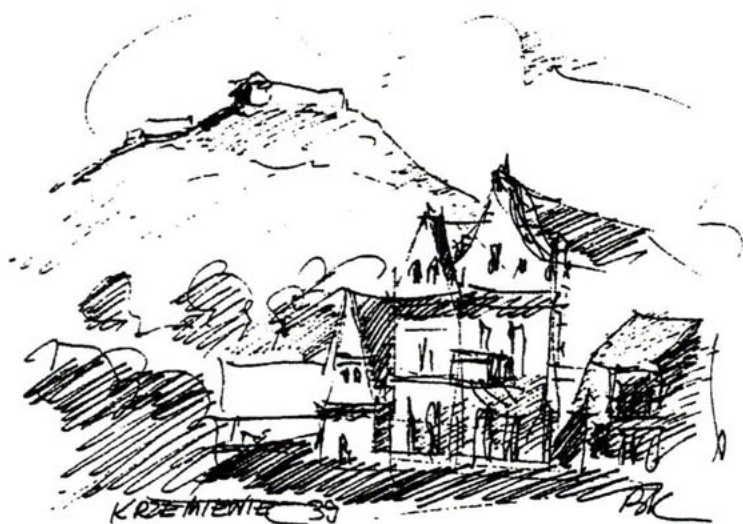

*Z. Dubovik*

*This Volume is dedicated to Dear Professor Kazimierz Urbanik on the occasion of his 70-th birthday and the fifty years of his scientific and didactic work. The Volume contains papers presented at the Probability Conference dedicated to him, held at Poraj (Poland), June 5–9, 1999, as well as papers of his other pupils and admirers. Also a biographical article presenting Professor's academic career and research achievements with a complete list of his publications until the year 2000 is included.*
