|----------------------------------------------------------------------------------------------------------------------------------|----------|
| W. KORCZYŃSKI: On a topological presentation of graphs . . . . .                                                                 | 761–772  |
| R. ALBERICH, F. ROSSELLÓ: Pushouts of partial homomorphisms of partial algebras III: closed-domain closed quomorphisms . . . . . | 773–791  |
| M. A. CHAUDHRY, A. B. THAHEEM: On $(\alpha, \beta)$ -derivations of semiprime rings, II . . . . .                                | 793–802  |
| A. MICZKO, B. PALCZEWSKI: Fixed point theorems for weakly commuting and compatible multi-valued mappings . . . . .               | 803–821  |
| E. G. KIR'YTSKII: Linearly invariant classes of functions analytic in a unit circle of zero type . . . . .                       | 823–845  |
| G. HERZOG: One-sided estimates for quasimonotone systems of boundary value problems . . . . .                                    | 847–856  |
| R. REDHEFFER: On Herod's quadratic differential system with infinitely many unknowns . . . . .                                   | 857–870  |
| M. MEDVEĎ: On the existence of global solutions of evolution equations . .                                                       | 871–882  |
| A. GUEZANE-LAKOUD: Abstract variable domain hyperbolic differential equations . . . . .                                          | 883–892  |
| E. SCHEFFOLD: Von inversen Operatoren erzeugte Einparameter-Halbguppen . . . . .                                                 | 893–904  |
| P. MULTARZYŃSKI: On some right invertible operators in differential spaces                                                       | 905–920  |
| M. PRAŽMOWSKA: A proof of the projective Desargues axiom in the Desarguesian affine plane . . . . .                              | 921–924  |
| R. STĘPNICKI: Equipower and equichordal extension . . . . .                                                                      | 925–938  |
| D. BLACHOWSKA: A modulus and an extremal form of a foliation . . . . .                                                           | 939–954  |
| M. GÎRȚU: A framed $f(3, -1)$ structure on the tangent bundle of a Lagrange space . . . . .                                      | 955–961  |
| M. DOUPOVEC, W. M. MIKULSKI: Horizontal extension of connections into (2)-connections . . . . .                                  | 963–975  |
| M. TIMOUMI: Subharmonics of a Hamiltonian class . . . . .                                                                        | 977–990  |
| A. RAY, J. FU, C. LAGO: Optimal supervisory control of regular languages                                                         | 991–1013 |
