**DE GRUYTER**

**DISCRETE MATHEMATICS AND APPLICATIONS** provides the latest information on the development of discrete mathematics in Russia to a world-wide readership. The journal contains papers from the Russian-language journal *Diskretnaya Matematika*, the only journal of the Russian Academy of Sciences devoted to this field of mathematics. *Discrete Mathematics and Applications* covers various subjects in the fields such as combinatorial analysis, graph theory, functional systems theory, cryptology, coding, probabilistic problems of discrete mathematics, algorithms and their complexity, combinatorial and computational problems of number theory and of algebra. The journal is published bimonthly, simultaneously with the Russian edition as a cover-to-cover translation. Issues contain, in addition to original articles and reviews in the above-mentioned subject areas, reviews of books published in and outside Russia and information notes.

All information regarding subscriptions, Open access, back volumes and orders is available online at [www.degruyter.com/dma](http://www.degruyter.com/dma).

## Contents

Aleksandr V. Akishin

**On groups with automorphisms generating recurrent sequences of the maximal period — 187**

Evgeniy. K. Alekseev and Ekaterina K. Karelina

**Classification of correlation-immune and minimal correlation-immune Boolean functions of 4 and 5 variables — 193**

Sergey S. Davidov

**Free commutative medial  $n$ -ary groupoids — 203**

Yuriy A. Kombarov

**Complexity of implementation of parity functions in the implication–negation basis — 211**

Sergey S. Marchenkov

**Closed classed of three-valued logic that contain essentially multiplace functions — 233**

Alexander A. Nechaev and Vladimir O. Popov

**A generalization of Ore’s theorem on irreducible polynomials over a finite field — 241**

Askar A. Tuganbaev

**Rings whose finitely generated right ideals are quasi-projective — 245**
