DE GRUYTER

DISCRETE MATHEMATICS AND APPLICATIONS provides the latest information on the development of discrete mathematics in Russia to a world-wide readership. The journal contains papers from the Russian-language journal *Diskretnaya Matematika*, the only journal of the Russian Academy of Sciences devoted to this field of mathematics. *Discrete Mathematics and Applications* covers various subjects in the fields such as combinatorial analysis, graph theory, functional systems theory, cryptology, coding, probabilistic problems of discrete mathematics, algorithms and their complexity, combinatorial and computational problems of number theory and of algebra. The journal is published bimonthly, simultaneously with the Russian edition as a cover-to-cover translation. Issues contain, in addition to original articles and reviews in the above-mentioned subject areas, reviews of books published in and outside Russia and information notes.

All information regarding subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/dma.

Printed in Germany

Contents

Anastasiya A. Gorodilova

Characterization of almost perfect nonlinear functions in terms of subfunctions — 193

Viktor A. Kopyttcev and Vladimir G. Mikhailov

Estimates for distribution of the minimal distance of a random linear code — 203

Oleg P. Orlov and Nikolay Yu. Pasyukov

The distributions of interrecord fillings — 213

Nikolay A. Peryazev and Ivan K. Sharankhaev

Galois theory for clones and superclones — 227

Boris A. Pogorelov and Marina A. Pudovkina

Overgroups of order 2^n additive regular groups of a residue ring and of a vector space — 239
