Corrigendum to: Jeffrey A. Wilhite*, Khemraj Hardowar, Harriet Fisher, Barbara Porter, Andrew B. Wallach, Lisa Altshuler, Kathleen Hanley, Sondra R. Zabar and Colleen C. Gillespie. Clinical problem solving and social determinants of health: a descriptive study using unannounced standardized patients to directly observe how resident physicians respond to social determinants of health. *Diagnosis* 2020, Volume 7, Issue 3, pages 313–324. https://doi.org/10.1515/dx-2020-0002.

Unfortunately, a typographic error in the results portion of the abstract was missed during final stages of proofing and editing. The count of full elicitors should read as 38/68 rather than 28/68, and the % of negative elicitors is 23%. The corrected results read as follows: Residents fell into three groups when it came to clinical problem-solving around a housing trigger for asthma: those who failed to ask about housing and therefore did not uncover mold as a potential trigger (*neglectors* – 21%; 14/68); those who asked about housing in negative ways that prevented disclosure and response (*negative elicitors* – 23%, 16/68); and those who elicited and explored the mold issue (*full elicitors* – 56%; 38/68).
