

## Notice of retraction

By this notice, the Editor and the Publisher of Forum Mathematicum retract from publication the following article at author's request:

Manfred Dugas, QE-transitive abelian groups, Forum Math. (2014), Ahead of Print, DOI 10.1515/forum-2013-0111.

This retraction is considered to be due to an honest error. The author of the above mentioned article, Manfred Dugas, credibly declares not having been aware of significantly similar work on  $n$ -fold transitive groups that Eugene Frank Cornelius Jr. had already published 40 years ago, rendering the above mentioned publication redundant.

Exemplary publications by Eugene Frank Cornelius Jr. to be mentioned in this context are:

- The quasi-endomorphism algebra of a torsion free abelian group, Doctoral Thesis, University of Washington, 1969.
- Note on quasi-decompositions of irreducible groups, Proc. Amer. Math. Soc. 26 (1970), 33–36.
- A generalization of separable groups, Pacific J. Math. 39 (1971), 603–613.

We ask the readership to accept our sincere apologies.

Received April 4, 2014.
