DE GRUYTER

The International Journal of Chemical Reactor Engineering (IJCRE) covers the broad fields of theoretical and applied reactor engineering. The range of topics includes single-phase and multi-phase reactor design, operation and control, new chemical reactor concepts, fluid mechanics and fluid dynamics, computational fluid dynamics, catalysis, low and high pressure and temperature operation, environmental and economical implications, as well as topics drawn from the substantial areas of overlap between reaction and reactor engineering. The journal is edited by an impressive list, including Franco Berruti, Cedric Briens, and Hugo de Lasa, leading specialists in chemical reactor engineering. Professor Berruti is the Dean of the School of Engineering at the University of Western Ontario. Authors include notable, international professors from Imperial College London, the Norwegian School of Science and Technology, and Bayer Corporation.

The publisher, together with the authors and editors, has taken great pains to ensure that all information presented in this work (programs, applications, amounts, dosages, etc.) reflects the standard of knowledge at the time of publication. Despite careful manuscript preparation and proof correction, errors can nevertheless occur. Authors, editors and publisher disclaim all responsibility for any errors or omissions or liability for the results obtained from use of the information, or parts thereof, contained in this work.
