DE GRUYTER

INTEGERS is a refereed electronic journal devoted to research in the area of combinatorial number theory. It is published with the help of the University of West Georgia, Charles University, and DIMATIA. We welcome original research articles in combinatorics and number theory, with a preference for those that have a connection to both fields. Topics covered by the journal include additive number theory, multiplicative number theory, sequences and sets, extremal combinatorics, Ramsey theory, elementary number theory, classical combinatorial problems, hypergraphs, and probabilistic number theory. Integers also houses a combinatorial games section.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/integers.
