DE GRUYTER

JOURNAL OF APPLIED ANALYSIS is an international journal devoted to applications of mathematical analysis. Among them there are applications to economics (in particular finance and insurance), mathematical physics, mechanics and computer sciences. Topics include applications of mathematical analysis (real and complex, harmonic, convex, variational), differential equations, dynamical systems, optimization (linear, nonlinear, convex, nonsmooth, multicriterial), optimal control, stochastic modeling and probability theory, numerical methods. The journal also welcomes works showing connections between mathematical analysis and other domains of mathematics such as geometry, topology, logic and set theory.

Journal of Applied Analysis is jointly produced by the Institute of Mathematics of the Technical University of Łódź and De Gruyter.

All information regarding notes for contributors, subscriptions, Open access, and orders is available online at www.degruyter.com/jaa.

Contents

Carlo Greco
On the cubic and cubic-quintic optical vortices equations —— 95

Youwei Zhang
Symmetry reductions and exact solutions to the Sharma–Tasso–Olever equation —— 107

T. S. S. R. K. Rao
Simultaneously proximinal subspaces —— 115

Masoud Mosallanezhad, Mohammad Janfada
Iteration regularized semigroups of set-valued functions —— 121

Gabriel Bengochea, Manuel Ortigueira
A recursive-operational approach with applications to linear differential systems —— 131

Stanisław Kowalczyk, Małgorzata Turowska
On symmetrically porouscontinuous functions —— 141

Mateusz Krukowski, Bogdan Przeradzki
Compactness result and its applications in integral equations —— 153

N. Papanastasiou, C. Papachristodoulos, X. Dimitriou
On statistically l_q-complete and c_{0s} in measure convergences of sequences of measurable functions —— 163

Meisam Noei Khorshidi, Sohrab Ali Yousefi
Ritz-least squares method for finding a control parameter in a one-dimensional parabolic inverse problem —— 169
