DE GRUYTER

JOURNAL OF APPLIED ANALYSIS is an international journal devoted to applications of mathematical analysis. Among them there are applications to economics (in particular finance and insurance), mathematical physics, mechanics and computer sciences. Topics include applications of mathematical analysis (real and complex, harmonic, convex, variational), differential equations, dynamical systems, optimization (linear, nonlinear, convex, nonsmooth, multicriterial), optimal control, stochastic modeling and probability theory, numerical methods. The journal also welcomes works showing connections between mathematical analysis and other domains of mathematics such as geometry, topology, logic and set theory.

Journal of Applied Analysis is jointly produced by the Institute of Mathematics of the Technical University of Łódź and De Gruyter.

All information regarding notes for contributors, subscriptions, Open access, and orders is available online at www.degruyter.com/jaa.
