

Supplementary Table 1: McNemar's test for Centaflow and clinical assessment of fetal growth restriction.

	Centaflow positive	Centaflow negative
Standard care positive	30	11
Standard care negative	27	16

$$\chi^2 = \frac{(11-27)^2}{11+27} \approx 6.74, p=0.014$$

18 Supplementary Table 2: Reported SAEs in the randomized part of the study for SC and CF
19 including frequencies and percentages and a comparison

	Standard care, n=715	Centaflow, n=703
Serious adverse events		
Related	-	0
Unrelated	521 (74.2%)	373 (52.3%)
