6th International Congress of Therapeutic Drug Monitoring and Clinical Toxicology

Chair: Susan Tett, Ph.D., School of Pharmacy, The University of Queensland, Brisbane.

The 6th International Congress of IATDM-CT is to be held at Cairns, Australia from 13-17 September 1999.

The Conference will be scientifically challenging, with the latest research and practice in clinical toxicology and therapeutic drug monitoring being presented. International and local experts will be attending the meeting to provide the most innovative and up-to-date ideas and techniques in the fields. This is an excellent opportunity to catch up on the latest international findings. Clinicians, scientists, toxicologists, pathologists, pharmacists, laboratory technicians and any other professionals with an interest in either clinical toxicology or therapeutic drug monitoring should attend.

There will be a day, and a half set aside for the important topic of immunosuppressant drug monitoring, building on two recent successful conferences held in Canada. A parallel clinical toxicology stream will be run over these days. Some of the other scheduled symposia topics include: The Quality Cycle in Therapeutic Drug Monitoring and Clinical Toxicology, Drugs of Abuse, Therapeutic Drug Monitoring and Drugs Metabolised via Cytochrome P450, New and Emerging Drugs in Therapeutic Drug Monitoring, Clinical Toxicology, Tropical Medicine, Monitoring in the Immunosuppressed (HIV), Aquatic Toxicology, Forensic Toxicology and Important Clinical Aspects of Therapeutic Drug Monitoring for the Immunosuppressant Drugs.

Workshops topics include: Extended Interval Aminoglycosides, Near Patient Testing, Population Pharmacokinetics and Pharmacodynamics, Monitoring of New Anti-psychotics and Antidepressants, Applications of Mass Spectrometry, Models of Therapeutic Drug Monitoring and Clinical Indicators, Testing in Alternative Body Fluids, Heavy Metal Toxicology, Chirality, Monitoring of New Anticonvulsants and Drugs of Abuse.

For further information and first announcement brochures, please contact the Congress management company: CIM, P.O. Box 242, Kings Cross, NSW 2011, Australia.

Die komplette Thrombozyten-Funktions-Diagnostik

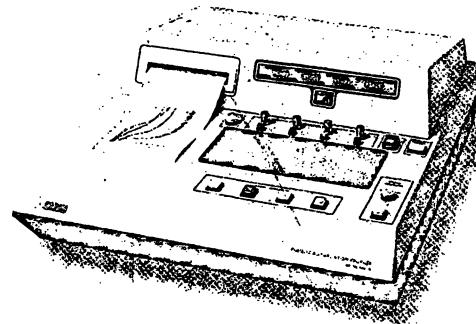

mit dem
PAP 4

Der PAP 4 bietet Ihnen nicht nur die wichtigsten Funktionsüberprüfungen:

- ✓ Adhäsion
- ✓ Formveränderungen (ADP Freisetzung)
- ✓ Enzymreaktion (ASS, Cyto Oxygenase)
- ✓ Agglutination

Er bietet auch Antworten der

- ✓ von Willebrand CoFaktor Aktivität
- ✓ Heparin induzierte Thrombozytopenie

- Kompaktgerät
- 4 Meßkanäle
- Bewährte Technologie
- Mikro Volumen
- Einfache Bedienung

Der PAP 4
- die komplette Diagnostik -
mehr Information bedeutet letztlich
weniger Investition
