DE GRUYTER

MONTE CARLO METHODS AND APPLICATIONS is a quarterly published journal presenting original articles on the theory and applications of Monte Carlo and quasi-Monte Carlo methods. Launched in 1995 the journal covers all stochastic numerics topics with emphasis on the theory of Monte Carlo methods and new applications in all branches of science and technology. The following topics will be covered: theory of Monte Carlo methods, quasi-Monte Carlo methods, integration, boundary value problems for PDE's, numerics of stochastic differential equations, simulation of random variables, stochastic processes and fields, and stochastic models in all fields of applied sciences.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/mcma.

Contents

Adam Metzler, Alexandre Scott

Rare event simulation for diffusion processes via two-stage importance sampling — 77

Michael Mascagni, Yue Qiu, Lin-Yee Hin

High performance computing in quantitative finance: A review from the pseudo-random number generator perspective — 101

Mircea Grigoriu

An efficient Monte Carlo solution for problems with random matrices — 121

Yuriy V. Kozachenko, Mykola P. Sergiienko

The criterion of hypothesis testing on the covariance function of a Gaussian stochastic process — 137

Idris Kharroubi, Nicolas Langrené, Huyên Pham

A numerical algorithm for fully nonlinear HJB equations: An approach by control randomization — 145
